On a Global Mission: The Automobiles of General Motors International Volume 3 Friesen Press

This volume, a sequel to *Form Miming Meaning* (1999), offers a selection of papers given at the second international symposium on iconicity (Amsterdam 1999). In the light of semiotic, linguistic and literary theory the studies gathered here investigate how iconicity works on all levels of language, in literary texts and other forms of verbal discourse. They investigate, among other subjects, the semiotic foundations of iconicity, the role played by iconicity in language evolution and in the way words are positioned syntactically. Special consideration is given to the iconic nature of metaphor and the 'mise en abyme', to iconically motivated punctuation and other typographic matters such as the manipulation of colour, fonts and spacing in advertising and in poetry. Other studies show how iconicity influences Shakespeare's rhetoric, the structural design of Margaret Atwood's writings and the changing fashions in fictional landscape description. Thus, these analyses of 'the motivated sign' represent yet another strong challenge to "Saussure's dogma of arbitrariness" (Jakobson).

This monograph covers different aspects related to utilization of alternative fuels in internal combustion (IC) engines with a focus on biodiesel, dimethyl ether, alcohols, biogas, etc. The focal point of this book is to present engine combustion, performance and emission characteristics of IC engines fueled by these alternative fuels. A section of this book also covers the potential strategies of utilization of these alternative fuels in an energy efficient manner to reduce the harmful pollutants emitted from IC engines. It presents the comparative analysis of different alternative fuels in a variety of engines to show the appropriate alternative fuel for specific types of engines. This book will prove useful for both researchers as well as energy experts and policy makers.

This study chronicles the success of the Japanese car in America. Starting with Japan's first gasoline-powered car, the Takuri, it examines early Japanese inventors and automotive conditions in Japan; the arrival of Japanese cars in California in the late 1950s; consumer and media reactions to Japanese manufacturers; what obstacles they faced; initial sales; and how the cars gained popularity through shrewd marketing. Toyota, Honda, Datsun (Nissan), Mazda, Subaru, Isuzu, and Mitsubishi are profiled individually from their origins through the present. An examination follows of the forced cooperation between American and Japanese manufacturers, the present state of the industry in America, and the possible future of this union, most importantly in the race for a more environmentally-sound vehicle.

Focusing on air pollution, energy efficiency and climate change, this book provides an introduction to Japan's environmental policies and regulations, and offers economic analyses and RIAs (Regulatory Impact Analysis) of environmental regulations implemented or planned by the national and local governments. The opening chapter reviews environmental economics and outlines the current status of RIAs in Japan. Chapter 2 analyzes the NOx-PM Act, which prohibits the use of old and polluting vehicles in metropolitan areas. Chapter 3 examines a Tokyo metropolitan government regulation which requires installation of pollution control equipment in older trucks that fail to meet emission standards. Chapter 4 traces the impact of the NOx-PM Act on the used car market and used vehicle exports. Chapter 5 presents an economic analysis of a highway toll reduction, revealing an unexpected negative social impact: it increased traffic congestion and associated environmental problems. The final three chapters address policies and regulations related to energy efficiency and climate change Chapter 6 evaluates the effectiveness of Japan's Energy Conservation Act, originally introduced in 1979 and amended numerous times to address climate change. Chapter 7 anticipates the impact of a proposed economy-wide carbon tax, using input-output analysis to assess short-term economic impacts in each sector. Also presented here is an examination of the effectiveness of a reduced carbon tax for energy-intensive industries, with a discussion of the impact of the proposal on households. The final chapter discusses the role and limitations of economic models for evaluating Japan's mid-term GHG (Greenhouse Gas) emission target during the post-Kyoto period. This is the first book to evaluate Japanese environmental policies from an economic perspective, using a variety of current quantitative approaches. Its findings and suggestions will benefit students, policy makers and government officials in developing and developed countries where the public faces similar environmental problems.

This book presents an in-depth understanding of the transformation of modern economy in the twenty-first century by examining the interface and interplay of three key forces of contemporary global economy—Foreign Direct Investment (FDI), Multinational Enterprises (MNEs), and Global Value Chains (GVCs)—and how the emerging nexus of these forces has already ushered in revolutionary transformation in global production, investment, trade, and employment in recent decades. A distinctive feature of the book is that it situates the contemporary GVC revolution—that envisages fragmentation and dispersion of production processes across the world based on competitive costs and quality—as a natural

progression of the traditional FDI-MNEs nexus, which emphasized internationalization of production and trade in search of profits, resources, markets, or cheap labour. Moreover, the book provides a comprehensive analysis, from historical, theoretical and empirical perspectives, of both traditional FDI-MNEs Nexus that dominated the world economy until the end of the twentieth century, and of the New Nexus of FDI-MNEs-GVCs, that has opened grand opportunities for global prosperity by providing short-cut paths to industrialization and economic growth for less developed countries. As an exemplar, the book examines GVCs in automobiles—a medium-tech manufacturing activity with numerous backward and forward linkages—to demonstrate how the FDI-MNE-GVC interface in this sector has wedged industrialization, employment, and trade in six emerging countries/regions—Brazil, Central and Eastern Europe, China, India, Mexico and Thailand.

Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

As ASEAN Vision 2020 proclaims, the members of ASEAN have achieved remarkable success in economic growth, stability and poverty reduction, over the past decades. There are, however, still diverse debates as to the factors which contributed to the success, with no conclusive assessment. This volume reviews the domestic reforms effectively introduced by ASEAN members after the 1997 financial crisis and what could be done to accelerate such reforms. With the entry of the 4 new members into AS...
