In 2000, the Department of Trade and Industry established the Small Business Service (SBS). This report presents four aspects of its work in more detail - SBS's role in: influencing Government regulations and policies; facilitating small business access to finance; helping to join up services across Government; providing advice and support to small business. The NAO report also sets out a number of recommendations, including the following: that the current performance measurement framework could be simplified, by reviewing the Public Service Agreement objectives and targets; that an improvement in the programme of evaluations should align Government targets with small business aims and objectives; that the Small Business Service actions and activities should be supported by well documented cost-effective evidence; that the Government Action Plan for departmental co-operation should be further developed, including specific commitments from government departments on the actions they are undertaking and the resources they have committed to small business issues. The latest data, from 2003 showed that of the 3.5 million businesses in England all bar 5,400 were either small (with fewer than 50 employees) or medium-sized (with 50 to 249 employees). Small and medium sized businesses are found in all sectors of the economy, account for half of all business turnover and employ 57% of the England's private sector workforce. This report examines the SBS's performance management framework and its performance against key targets.

This fascinating new book explores the world of portraiture from a number of vantage points, and asks key questions about its nature. How has portraiture changed over the centuries? How

have portraits represented their subjects, and how have they been interpreted? Issues of identity, modernity, and gender are considered within a cultural and historical context. Shearer West uncovers much intriguing detail about a genre that has often been seen as purely representational, featuring examples from African tribes to Renaissance princes, and from 'stars' such as David and Victoria Beckham to ordinary people. In the process, she shows us how to communicate with the past in an exciting new way.

This report issues a call for urgent action to combat the growing epidemic of obesity, which now affects developing and industrialized countries alike. Adopting a public health approach, the report responds to both the enormity of health problems associated with obesity and the notorious difficulty of treating this complex, multifactorial disease. With these problems in mind, the report aims to help policy-makers introduce strategies for prevention and management that have the greatest chance of success. The importance of prevention as the most sensible strategy in developing countries, where obesity coexists with undernutrition, is repeatedly emphasized. Recommended lines of action, which reflect the consensus reached by 25 leading authorities, are based on a critical review of current scientific knowledge about the causes of obesity in both individuals and populations. While all causes are considered, major attention is given to behavioural and societal changes that have increased the energy density of diets, overwhelmed sophisticated regulatory systems that control appetite and maintain energy balance, and reduced physical activity.

Specific topics discussed range from the importance of fat content in the food supply as a cause of population-wide obesity, through misconceptions about obesity held by both the medical profession and the public, to strategies for dealing with the alarming prevalence of obesity in children. The report has eleven chapters presented in five parts. Part one, which assesses the magnitude of the problem, explains the system for classifying overweight and obesity based on the body mass index, considers the importance of fat distribution, and provides an overview of trends in all regions of the world, concluding that obesity is increasing worldwide at an alarming rate. Chapters in part two evaluate the true costs of obesity in terms of physical and mental ill health, and the human and financial resources diverted to deal with these problems. Specific health consequences discussed include increased risk of cardiovascular disease, cancer, and other noncommunicable diseases, endocrine and metabolic disturbances, debilitating health problems, and psychological problems. The health benefits and risks of weight loss are also assessed. Part three draws on the latest research findings to consider specific factors involved in the development of overweight and obesity. Discussion centres on factors, such as high intakes of fat, that may disrupt normal physiological regulation of appetite and energy balance, and the role of dietary factors and levels of physical activity. In terms of opportunities for prevention, particular attention is given to the multitude of environmental and societal forces that adversely affect food intake and physical activity and may thus overwhelm the physiological regulatory systems that

keep weight stable in the long term. The possible role of genetic and biological susceptibility is also briefly considered. Against this background, the fourth and most extensive part maps out strategies for prevention and management at both the population and individual levels. Separate chapters address the need to develop population-based strategies that tackle the environmental and societal factors implicated in the development of obesity, and compare the effectiveness of current options for managing overweight or obese individuals. Specific strategies discussed include dietary management, physical activity and exercise programmes, behaviour modification, drug treatment, and gastric surgery. While noting striking recent progress in the development of drug treatments, the report concludes that gastric surgery continues to show the best long-term success in treating the severely obese. The final part sets out key conclusions and recommendations for responding to the global obesity epidemic and identifies priority areas where more research is urgently needed. experiences, she began to explore the lonely city by way of art. Moving fluidly between the works and lives of some of the city's most compelling artists, Laing conducts an electric, dazzling investigation into what it means to be alone, illuminating not only the causes of loneliness but also how it might be resisted and redeemed.

By using a series of studies of contemporary mainstream Hollywood movies - "Blue Velvet, Wall Street, Crimes and Misdemeanors, When Harry Met Sally, Sex Lies and Videotape, Do the Right Thing" - Norman Denzin explores the tension between ideas of the postmodern, and traditional ways of analyzing society. The discussion moves between two forms of text: social theory and cinematic representations of contemporary life. Denzin analyzes the ideas of society embedded in poststructuralism, postmodernism, feminism, cultural studies and Marxism through the ideas of key theorists like Baudrillard, Barthes, Habermas, Jameson, Bourdieu and Derrida. He relates these to the problematic of the postmodern self as exposed in cinema centering on the decisive performance of race, gender and class.

Antioxidants are present naturally in virtually all food commodities, providing them with a valuable degree of protection against oxidative attack. When food commodities are subjected to processing, such natural antioxidants are often depleted, whether physically, from the nature of the process itself, or by chemical degradation. In consequence, processed food products usually keep less well than do the commodities from which they originated. Ideally, food producers would like them to keep better. This objective can often be achieved by blending natural products rich in antioxidants with processed foods, or by using well recognised antioxidants as food additives. In order to understand their action, and hence to apply antioxidants intelligently in food product formulation, some knowledge of the mechanisms by which they function is necessary. This is complex and of antioxidative may rely on one or more of several alternative forms intervention. Accordingly, the various mechanisms that may be relevant are discussed in Chapter 1, in each case including the 'intervention' mechanism. When present in, or added to, foods antioxidants are functional in very small quantities,

The Wish is a short, sharp, chilling story from Roald Dahl, the master of the shocking tale. In The Wish, Roald Dahl, one of the world's favourite authors, tells a sinister story about the darker side of human nature. Here, an imaginative boy plays a game that quickly gets out of hand . . . The Wish is taken from the short story collection *Someone Like You*, which includes seventeen other devious and shocking stories, featuring the wife who serves a dish that baffles the police; a curious machine that reveals the horrifying truth about plants; the man waiting to be bitten by the venomous snake asleep on his stomach; and others. 'The absolute master of the twist in the tale.' (Observer) This story is also available as a Penguin digital audio download read by the sublime Stephen Mangan. Roald Dahl, the brilliant and worldwide acclaimed author of *Charlie and the Chocolate Factory*, *James and the Giant Peach*, *Matilda*, and many more classics for children, also wrote scores of short stories for adults. These delightfully disturbing tales have often been filmed and were most recently the inspiration for the West End play, *Roald Dahl's Twisted Tales* by Jeremy Dyson. Roald Dahl's stories continue to make readers shiver today.
