In an increasingly interconnected world, data breaches grab headlines. The security of sensitive information is vital, and new requirements and regulatory bodies such as the Payment Card Industry Data Security Standard (PCI-DSS), Health Insurance Portability and Accountability Act (HIPAA), and Sarbanes-Oxley (SOX) create challenges for enterprises that use encryption to protect their information. As encryption becomes more widely adopted, organizations also must contend with an ever-growing set of encryption keys. Effective management of these keys is essential to ensure both the availability and security of the encrypted information. Centralized management of keys and certificates is necessary to perform the complex tasks that are related to key and certificate generation, renewal, and backup and recovery. The IBM® Enterprise Key Management Foundation (EKMF) is a flexible and highly secure key management system for the enterprise. It provides centralized key management on IBM zEnterprise® and distributed platforms for streamlined, efficient, and secure key and certificate management operations. Throughout history and around the world, community members have come together to build places, be it settlers constructing log cabins in nineteenth-century Canada, an artist group creating a waterfront gathering place along the Danube in Budapest, or residents helping revive small-town main streets in the United States. What all these projects have in common is that they involve local volunteers in the construction of public and community places; they are community-built. Although much attention has been given to specific community-built movements such as public murals and community gardens, little has been given to defining community-built as a whole. This volume provides a preliminary description of community-built practices with examples from the disciplines of urban design, historic preservation, and community art. Taken as a whole, these community-built projects illustrate how the process of local involvement in adapting, building, and preserving a built environment can strengthen communities and create places that are intimately tied to local needs, culture, and community. The lessons learned from this volume can provide community planners, grassroots facilitators, and participants with an understanding of what can lead to successful community-built art, construction, preservation, and placemaking.

The healthcare workforce and landscape continues to evolve with the ongoing education systems forming in foreign countries and immigration and foreign employment continuing to grow in the United States. Every health care provider and patient is challenged with cultural competency and acceptance on a daily basis. Often times our own prejudices and beliefs have great potential to interfere with effective health care interactions when what is truly important is providing the best patient care possible. There is much discussion around cultural sensitivity and cultural expertise, but now the discussion has shifted to cultural sensibility, which is a deliberate behavior that proactively provides an enriched provider consumer/patient interaction, where the health care provider acknowledges cultural issues and situations through thoughtful reasoning, responsiveness, and discreet (attentive, considerate, and observant) interactions. In this highly practical and informative handbook, author Sally Ellis Fletcher offers healthcare providers a process that encourages them to first consider their own attitudes, biases, beliefs, and prejudices through self-reflection. Cultural Sensibility in Healthcare challenges readers to examine cultural issues beyond just theory and to instead explore culture as it affects your professional role thus creating culturally sensibility health care encounters.

The Politically Incorrect Guide to Climate Change gives a voice -- backed by statistics, real-life stories, and incontrovertible evidence -- to the millions of "deplorable" Americans skeptical about the multibillion dollar "climate change" complex, whose claims have time and time again been proven wrong.
