The management of cultural heritage and public real-estate assets is one of the most crucial challenges concerning the sustainable use of these resources, involving dynamic methods to stimulate preservation, development, renewal, and transmission to future generations of these essential assets. The contributions presented in this book provide a rich and varied panorama of research experiences and innovative tools, capable of promoting the re-use of cultural heritage in European cities and cultural landscapes, using a circular economy logic as a model of sustainable development. From this point of view, cultural capital becomes the driver of a regeneration process on the local, urban, and metropolitan scales, in which the transversal interconnections between the production cycles of the adaptive re-use of the available heritage, both in the adaptation and in the management phase, configure a circular process of multidimensional production of value. Therefore, future territorial redevelopment projects can base their idea strength on an open system of appropriately selected social attractors, whose enhancement and use have the objective of triggering widespread regeneration effects on the whole territory of influence, receiving inducement and resources to progress.

This book addresses challenges that new technologies and the big data revolution pose to existing regulatory and legal frameworks. The volume discusses issues such as blockchain and its implications for property transactions and taxes, three (or four) dimensional title registration, land use and urban planning in the age of big data, and the future of property rights in light of these changes. The book brings together an interdisciplinary collection of chapters that revolve around the potential influence of disruptive technologies on existing legal norms and the future development of real estate markets. The book is divided into five parts. Part I presents a survey of the current available research on blockchain and real estate. you can use in your daily practice, this expert guide assesses broker liability issues to help you confidently represent your client(s).

In the 1920s, newspapers and real estate developers colluded in a scheme to sell tiny vacation lots to subscribers. A zealous advertising campaign spawned a land-buying frenzy that sprouted dozens of waterfront summer colonies across the country. The resulting legal, social and environmental mayhem caused some of these communities to disappear or be drastically altered in character, while others managed to survive more or less intact. Drawing on newspaper accounts of the day, this book explores how the scheme eluded accusations of fraud, creating an assembly line for middle class resorts through a lucrative merger of real estate and journalism. Pell Lake, Wisconsin, serves as a case study that yields the best evidence for determining if it was all a scam. Told here for the first time, the story of this unusual alliance and the communities it created offers lessons for today's entrepreneurs, journalists, advertisers, real estate developers, environmentalists and anyone who has ever lived in a resort community.

This contribution argues that a long-established social order has been in place since the first stratified societies in the Near Middle East which unavoidably comes with substantial economic, political and environmental repercussions. Part I of the book dissects the various facets of this order, which is termed the social dominance paradigm, while in Part II a fundamentally different order, the peace paradigm, is introduced. The latter rests on real democracy (in the Athenian sense), sustainability and peace. As such, both paradigms function as vehicles for further analysis and research while the peace paradigm also provides a rough plan for the implementation of transformational change. Typically, political, economic, social, and environmental research seeks to increase specialized knowledge. Here, however, the overall intent is to utilize interdisciplinary evidence and connect the dots between a number defining features within seemingly modern societies. The argument is that these are, in fact, not modern at all but follow an ancient template of power, control, and coordination concentrated in the hands of the few. Potentially, this contribution can function as

a trans-disciplinary methodological framework as well as an information hub for researchers in the fields of political and social sciences, history, anthropology, evolutionary biology, organization and peace studies. Practitioners who are interested in fundamental social change may also find the issues raised to be of interest. As such, this book provides a generalist, evidence-based discussion of a multi-disciplinary nature that may pique the interest of both experts and amateurs alike.
