Social Emergency Medicine incorporates consideration of patients' social needs and larger structural context into the practice of emergency care and related research. In doing so, the field explores the interplay of social forces and the emergency care system as they influence the well-being of individual patients and the broader community. Social Emergency Medicine recognizes that in many cases typical fixes such as prescriptions and follow-up visits are not enough; the need for housing, a safe neighborhood in which to exercise or socialize, or access to healthy food must be identified and addressed before patients' health can be restored. While interest in the subject is growing rapidly, the field of Social Emergency Medicine to date has lacked a foundational text – a gap this book seeks to fill. This book includes foundational chapters on the salience of racism, gender and gender identity, immigration, language and literacy, and neighborhood to emergency care. It provides readers with knowledge and resources to assess and assist emergency department patients with social needs including but not limited to housing, food, economic opportunity, and transportation. Core emergency medicine content areas including violence and substance use are covered uniquely through the lens of Social Emergency Medicine. Each chapter provides background and research, implications and recommendations for practice from the bedside to the hospital/healthcare system and beyond, and case studies for teaching. Social Emergency Medicine: Principles and Practice is an essential resource for physicians and physician assistants, residents, medical students, nurses and nurse practitioners, social workers, hospital administrators, and other professionals who recognize that high-quality emergency care extends beyond the ambulance

realism, film noir, hip hop, and chicanismo, *Tropic of Orange* takes place in a Los Angeles where the homeless, gangsters, infant organ entrepreneurs, and Hollywood collide on a stretch of the Harbor Freeway. Hemmed in by wildfires, it's a symphony conducted from an overpass, grandiose, comic, and as diverse as the city itself—from an author who has received the California Book Award and the Association for Asian American Studies Book Award, among other literary honors. “Fiercely satirical . . . Dr. Steven Kussin, physician and a pioneer in the Shared Decision movement, takes readers through the steps of how to avoid the many pitfalls of unnecessary and sometimes even dangerous medical care. The American healthcare system is subsidized by its services to healthy people. The goal as it is for any business is to encourage people to become consumers by creating an emotionally-fueled demand for things that are suddenly and urgently needed. It's hard to make healthy people well; it's easy to make them sick. Under the goal to make you even healthier, the medical industry identifies and encourages investigations and preventive technologies for 'problems' unlikely to occur, unlikely to harm, unlikely to benefit from testing, and, once diagnosed, unlikely to benefit from treatment. Profitable services go on indefinitely for those who are young and well. For the health care industry being in good health is not just the best way to live; good health is also the slowest way to die. Many people find themselves on what the author calls the Slippery Slope, experiencing a cascade of escalating

misfortunes produced by more tests with incrementally greater risk, expense, and fewer benefits. Many people, who, in the attempt to improve what is already just fine, unquestioningly pay an immediate and visible price for what are distant, invisible, and uncertain benefits. The central starting point for initiating a Slippery Slope adventure can be the first blood test, the first screening test, the first x-ray, the first pill, or the first diagnosis that's accepted by unwitting and trusting consumers. The bottom of the Slippery Slope is occupied by those previously well but who now are damaged, and by others who suffered needless unscheduled deaths. America's famed consumer skepticism when judging retail products is curiously and dangerously absent in their interactions within the healthcare system. Here, Steven Kussin offers strategies that give readers knowledge and power by offering unique perspectives, information, and resources. He confronts the mighty forces arrayed against health care consumers and helps readers learn to identify them themselves. The power of money, the authority of science, the stature of physicians, the lure of elective health 'improvements', the promise of technology, and the pitch perfect, perfect pitches of televised ads all conspire to push people in directions that are often at odds with their stated priorities and interests. This book is dedicated to one lesson: The view from atop the Slope, before making a health care decision, is better than the view from the bottom, after having made a bad one. This volume offers readers various perspectives and visions for cutting-edge research in ubiquitous healthcare. The topics emphasize large-scale architectures and high performance solutions for smart healthcare, healthcare monitoring using large-scale computing techniques, Internet of Things (IoT) and big data analytics for healthcare, Fog Computing, mobile health, large-scale medical data mining, advanced machine learning methods for mining

This volume provides conceptual syntheses of diverging multilingual contexts,

research findings, and practical applications of integrating content and language (ICL) in higher education in order to generate a new understanding of the cross-contextual variation. With contributions from leading authors based in Asia, the Middle East, and Europe, the volume offers comparison of contextualized overviews of the status of ICL across the geographic areas and allows us to identify patterns and advance the scholarship in the field. ICL in teaching and learning has become an important consideration in the endeavors to address linguistic diversity at universities, which has resulted from the growing teacher and student mobility around the world.

This book provides a guide for the management of patients with cardiovascular emergencies in the ER. It covers a broad range of the most important and frequent acute cardiovascular events including coronary syndromes, aortic syndromes, pulmonary embolism, and left heart failure. Pragmatic in nature, chapters discuss frequent clinical presentations in a thorough fashion while emphasizing a practical and concise approach to diagnosis and treatment. In addition, the book explores how new knowledge and technological advances are improving the quality of patient care in the emergency room, highlighting technological advances in the use of pharmacotherapy, biomarkers, and imaging techniques such as X-ray, echocardiography, CT, MRI, and nuclear. Cardiology

in the ER: A Practical Guide is an essential resource for physicians and related professionals, residents, and fellows in cardiology, emergency medicine, intensive and critical care, and internal medicine.

The first major book to examine ancient Christian literature on hell through the lenses of gender and disability studies Throughout the Christian tradition, descriptions of hell's fiery torments have shaped contemporary notions of the afterlife, divine justice, and physical suffering. But rarely do we consider the roots of such conceptions, which originate in a group of understudied ancient texts: the early Christian apocalypses. In this pioneering study, Meghan Henning illuminates how the bodies that populate hell in early Christian literature—largely those of women, enslaved persons, and individuals with disabilities—are punished after death in spaces that mirror real carceral spaces, effectually criminalizing those bodies on earth. Contextualizing the apocalypses alongside ancient medical texts, inscriptions, philosophy, and patristic writings, this book demonstrates the ways that Christian depictions of hell intensified and preserved ancient notions of gender and bodily normativity that continue to inform Christian identity.

This edited book examines the phenomenon of English as a Lingua Franca (ELF) in the Japanese context, using multilingualism as a lens through which to explore

language practices and attitudes in what is traditionally viewed as a monolingual, monocultural setting. The authors cover a broad spectrum of topics within this theme, including language education policies, the nature of ELF communication in both academic and business settings, users' and learners' perceptions of ELF, and the pedagogy to foster ELF-oriented attitudes. Teaching and learning practices are reconsidered from ELF and multilingual perspectives, shifting the focus from the conformity to native-speaker norms to ELF users' creative use of multilingual resources. This book is a key resource for advancing ELF study and research in Japan, and it will also be of interest to students and scholars studying multilingualism and World Englishes in other global contexts.

Even though blockchain technology was originally created as a ledger system for bitcoin to operate on, using it for areas other than cryptocurrency has become increasingly popular as of late. The transparency and security provided by blockchain technology is challenging innovation in a variety of businesses and is being applied in fields that include accounting and finance, supply chain management, and education. With the ability to perform such tasks as tracking fraud and securing the distribution of medical records, this technology is key to

the advancement of many industries.

The **Research Anthology on Blockchain Technology in Business, Healthcare, Education, and Government** is a vital reference source that examines the latest scholarly material on trends, techniques, and uses of blockchain technology applications in a variety of industries, and how this technology can further transparency and security. Highlighting a range of topics such as cryptography, smart contracts, and decentralized blockchain, this multi-volume book is ideally designed for academics, researchers, industry leaders, managers, healthcare professionals, IT consultants, engineers, programmers, practitioners, government officials, policymakers, and students.

The second, fully updated edition of this book applies and contextualizes up-to-date information on pediatric surgery for low and middle-income countries (LMICs). The book is organized in general anatomic and thematic sections within pediatric surgery, such as urology, oncology, orthopedics and gastroenterology and includes chapters addressing the unique challenges and approaches for pediatric surgery in low-resource settings. Each chapter has dual authorship LMIC author providing context-specific insights and authors from high-income

countries (HICs) contributing experience from well-resourced settings. Written in a reader-friendly format, this book has a uniform structure in each chapter, with introduction, demographics, etiology, pathophysiology, clinical presentations, investigations, management, outcome, prevention, ethics, evidence-based surgery and references. This book analyses the private provision of rescue and emergency services, and focuses on the emergence of the world's largest rescue company, Falck. The author's structured academic perspective is informed through close co-operation with Falck, which operates in 44 countries and across 6 continents. The chapters examine aspects of reliability, culture, innovation, trust, governance and business development within rescue and emergency services, including differentiation, internationalisation and globalisation. Drawing on detailed case studies of Falck's global work in the USA, Columbia, India and Denmark, *Private Action for Public Purpose* is instructive for students and researchers of business and management, and will provide value for emergency responders, managers, policy-makers and organisations involved in emergency response and crisis management.

As with other transportation methods, safety issues in aircraft can result in a total loss of life. Recently, the air transport industry has come under immense scrutiny after several deaths occurred due to aircraft design and airlines that allowed

improperly inspected aircraft to fly. Spacecraft too have found errors in system software that could lead to catastrophic failure. It is imperative that the aviation and aerospace industries continue to revise and refine safety protocols from the construction and design of aircraft, to secure and improve aviation systems, and to test and inspect aircraft. The Research Anthology on Reliability and Safety in Aviation Systems, Spacecraft, and Air Transport is a vital reference source that examines the latest scholarly material on the use of adaptive and assistive technologies in aviation to establish clear guidelines for the design and implementation of such technologies to better serve the needs of both military and civilian pilots. It also covers new information technology use in aviation systems to streamline the cybersecurity, decision making, planning, and design processes within the aviation industry. Highlighting a range of topics such as air navigation systems, computer simulation, and airline operations, this multi-volume book is ideally designed for pilots, scientists, engineers, aviation operators, air traffic controllers, air crash investigators, teachers, academicians, researchers, and students.

Tropical emerging diseases pose a significant risk for the circulation of old and new pathogens in areas previously unknown, also implying the possibility of new morbidities and mortalities and new consequences for naïve populations.

Globalization, migration and travel are key factors for tropical diseases, and represent the need for integration of tropical medicine, travel medicine and epidemiology in the understanding of such complex situations. Neglected tropical diseases such as leprosy or Chagas disease, arboviral diseases, HIV, Ebola, and arenaviral infections are just a few examples. This book tries to update significant epidemiological and clinical research in many aspects with a multinational

Cancer is one of the leading causes of death in human beings. Though several synthetic medicines are used to treat cancer, they are largely inefficient and unsafe. In contrast, plants, which have been used for medicinal purposes since time immemorial, have proved to be useful in fighting cancer, with natural compounds from plants and their derivatives offering safe and effective treatment and management for several types of cancer. Plants such as *Catharanthus roseus*, *Podophyllum peltatum*, *Taxus brevifolia*, *Camptotheca acuminata*, *Andrographis paniculata*, *Crateva nurvala*, *Croton tonkinensis*, *Oplopanax horridus* etc., are important source of chemotherapeutic compounds. These plants have proven their value in the treatment of cancer and various other infectious diseases, and several common anticancer compounds such as taxol, podophyllotoxins, camptothecin, vinblastine, vincristine, homoharringtonine etc. have been isolated and purified from these medicinal plants. Unfortunately, many of these anticancer plants have become endangered due to ruthless and irresponsible harvesting practices. Hence, there is a need to conserve these species and to propagate them on a large scale using plant tissue culture. Alternatively, plant cell tissue and organ culture biotechnology could be adopted to produce these anticancer compounds without the need for cultivation. A better

and values. Healthcare institutions experience absenteeism, change in commerce patterns, and interrupted supply/delivery in this context. It has also revealed the extensive amounts of data needed for population health management, as well as the opportunities afforded by mainstreaming telehealth and virtual care capabilities, thus making the implementation of health IT essential in the post-pandemic era. *Quality of Healthcare in the Aftermath of the COVID-19 Pandemic* clarifies how healthcare professionals might provide their services differently than treating a patient through its vicinity with multiple providers. It examines the notion that healthcare education requires a pack of healthcare workers from varied educational backgrounds and training levels for the nuances of a disease. Covering topics such as blockchain technology, power density analysis, and supply chain, this book is a valuable resource for undergraduate and extended degree program students, graduate students of healthcare quality and health services management, healthcare managers, health professionals, researchers, professors, and academicians.

“The author, a physician, draws on his long and varied experiences... His selection of cases and detailed descriptions of the environments in which they unfold clearly convey his values and a humanistic approach to patient care.

...provides an excellent critique of thoughtless adoption of technology in clinical

medicine, and offers suggestions on how to incorporate humanism into the technology development and implementation process...recommended”—Choice Medicine is an ancient profession that advances as each generation of practitioners passes it down to the next. It remains a distinguished, flawed and rewarding vocation--but it may be coming to an end as we know it. Computer algorithms promise patients better access, safer therapies and more predictable outcomes. Technology reduces costs, designs more effective and personalized treatments and diminishes fraud and waste. Balanced against these miraculous developments is the risk that medical professionals will forget their primary responsibility is to their patients, not to a template of care. Written for anyone who has considered a career in health care--and for any patient who has had an office visit where a provider spent more time doing data-entry than examining them--this book weighs the benefits of emerging technologies against the limitations of traditional systems to envision a future where both doctors and patients are better-informed consumers of health care tools.

Trust Creating the Foundation for Entrepreneurship in Developing Countries  
Entrepreneurial ventures often fail in the developing world because of the lack of something taken for granted in the developed world: trust. Over centuries the developed world has built up customs and institutions like enforceable contracts,

an impartial legal system, credible regulatory bodies, even unofficial but respected sources of information like Yelp or Consumer Reports that have created a high level of what scholar and entrepreneur Tarun Khanna calls “ambient trust.” If a product is FDA-approved we feel confident it's safe. If someone makes an untrue claim or breaks an agreement we can sue. Police don't demand bribes to do their jobs. Certainly there are exceptions, but when brought to light they provoke a scandal, not a shrug. This is not the case in the developing world. But rather than become casualties of mistrust, Khanna shows that smart entrepreneurs adopt the mindset that, like it or not, it's up to them to weave their own independent web of trust—with their employees, their partners, their clients, their customers and with society as a whole. This can certainly be challenging, and requires innovative approaches in places where the level of societal mistrust is so high that, as in one example Khanna provides, an official certification of quality simply arouses suspicion—and lowers sales! Using vivid examples from Brazil, China, India, Mexico and elsewhere, Khanna shows how entrepreneurs can build on existing customs and practices instead of trying to push against them. He highlights the role new technologies can play (but cautions that these are not panaceas), and explains how entrepreneurs can find dependable partners in national and local governments to create impact at scale.

## Where To Download 2017 Medical Provider Directory Emi Health

As far back as the 18th century Adam Smith recognized trust as what Khanna calls “the hidden engine of economic progress.” “Frankness and openness conciliate confidence,” Smith wrote. “We trust the man who seems willing to trust us.” That kind of confidence is critical to entrepreneurial success, but in the developing world entrepreneurs have to establish it through their own efforts. As Khanna puts it, “the entrepreneur must not just create, she must create the conditions to create.”

This e-book is a compilation of papers presented at the 6th Mechanical Engineering Research Day (MERD'19) - Kampus Teknologi UTeM, Melaka, Malaysia on 31 July 2019.

This book illustrates the significance of biomedical engineering in modern healthcare systems. Biomedical engineering plays an important role in a range of areas, from diagnosis and analysis to treatment and recovery and has entered the public consciousness through the proliferation of implantable medical devices, such as pacemakers and artificial hips, as well as the more futuristic technologies such as stem cell engineering and 3-D printing of biological organs. Starting with an introduction to biomedical engineering, the book then discusses various tools and techniques for medical diagnostics and treatment and recent advances. It also provides comprehensive and integrated information on

rehabilitation engineering, including the design of artificial body parts, and the underlying principles, and standards. It also presents a conceptual framework to clarify the relationship between ethical policies in medical practice and philosophical moral reasoning. Lastly, the book highlights a number of challenges associated with modern healthcare technologies.

"Perhaps I should have realized that cancer runs in my family. After all, three grandparents and my father and brother perished from this disease. Yet, when I received my colorectal cancer diagnosis, I was surprised. I never expected to be primarily identified as a cancer patient. Following a typical combination of chemotherapy, radiation, surgery, and more chemo, I was presumably cancer-free when my post-treatment scans looked clean. Nonetheless, within a year I received a terminal diagnosis; cancer had metastasized in my lungs. Thus began my year as a dead woman--a time of chaotic emotions, new priorities, and rapid-fire plans and changes. Expecting the unexpected became a theme in my life, but the things that turned out to be most shocking are social, familial, and even my expectations about what is realistic for a dead woman to be or do." Preconceptions about a terminal cancer diagnosis frequently are based on popular culture depictions of cancer and dying, which can be misleading as a guide for knowing what to expect when you're expecting to die. This memoir provides one woman's often-irreverent, pop culture-illustrated guide to life that deconstructs some common preconceptions about living with a terminal diagnosis.

Sicily, the world capital of the mafia, is the main European docking area of the current African migration wave and represents the geopolitical middle-ground between the opulent and the plundered world.

In today's modernized world, implementing technology into the infrastructures of communities has become a common custom. The idea of digital economy has proven to be an efficient, dynamic, and highly adaptable mode of performance, and regions across the globe have begun applying these digital approaches to their populated foundation. One region of the world that has recently begun using modern technologies is Eurasia. As they continue their technological transition from "theory" to "practice," significant research is needed on the emergence of sustainability in these countries. *Toward Sustainability Through Digital Technologies and Practices in the Eurasian Region* is a pivotal reference source that provides vital research on the implementation of digital initiatives within Eurasian countries and their social and economic principles. While highlighting topics such as educational technologies, mobile applications, and sustainable business, this publication explores the cultural aspects and social interaction of digital applications within this region of the world. This volume offers research-based studies on English for Specific Purposes in higher education from across the world. By drawing on international studies, the book brings together diverse ESP practices and aspects of relevant issues in the development of ESP programs, teachers and learners in a coherent fashion. There is a growing need for undergraduate students to develop their proficiency of ESP skills and knowledge in the increasingly globalized world. Knowledge of ESP is an important factor in subject matter learning by students, and also closely related to the performance of university graduates in the relevant sectors. Careful planning and efficient implementation are essential to ensure the quality of the language learning process. For a variety of reasons, it proves difficult to maintain ESP instruction in higher education. These reasons include the incompetence of teachers, lack of materials for that specific context, as well as lack of opportunities for ESP teachers to develop their skills. The chapters in this book, taken from a wide variety of countries, shed light on the diversity of current practices and issues surrounding ESP.

This book presents the multiple facets of English as a Medium of Instruction (EMI) in higher education across various academic disciplines, an area that is expected to grow constantly in response to the competitive global higher education market. The studies presented were conducted in various EMI classrooms, with data collected from

observing and documenting the teaching activities, and from interviewing or surveying EMI participants. Through data analysis and synthesis, cases across disciplines – from engineering, science, technology, business, social science, medical science, design and arts, to tourism and leisure service sectors – are used to illustrate the various EMI curriculum designs and classroom practices. Although the cases described are limited to Taiwanese institutions, the book bridges the gap between planning and executing EMI programs across academic domains for policy makers, administrators, content teachers, and teacher trainers throughout Asia.
