prepares readers for working with military families. Objectives, key terms, tables, figures, summaries, and exercises, including web based exercises, serve as a chapter review. The book concludes with a glossary of key terms. Engaging vignettes are featured throughout:

- Voices from the Frontline offer personal accounts of issues faced by actual program leaders, practitioners, researchers, policy makers, service members, and their families.
- Spotlight on Research highlights the latest studies on dealing with combat related issues.
- Best Practices review the optimal strategies used in the field.
- Tips from the Frontline offer suggestions from experienced personnel.

The book opens with an introduction to military culture and family life. Joining the military and why people do so are explored in chapter 2. Next, life in the military including relocation, employment, education, and deployment are examined. Daily lives of children in military families are explored in chapter 4. How stress and resilience theories are used in working with military families are then reviewed. Chapter 6 focuses on milestones experienced by service members and programs that support them through these transitions. Everyday issues caused by the trauma of war are reviewed in Chapters 7 and 8. Programs, policies, and organizations that serve military families in dealing with deployment, education, and health and child care are explored in chapters 9 and 10 followed by initiatives supporting reintegration

and reunification issues. Next, how to work with families and those who have experienced traumatic events is considered. The book concludes with a review of career opportunities and stories from working professionals. Intended as a text for advanced undergraduate or graduate courses on military families or as a supplement for courses on the family, marriage and family, stress and coping, or family systems taught in family studies, human development, clinical or counseling psychology, sociology, social work, and nursing, this book also appeals to helping professionals who work with military families.

This work attempts to clarify the major problems facing Russia's armed forces in the present and immediate future. It covers threats from terrorists, break away republics and threats from outside Russia's borders. The book also includes political and economic problems facing the military.

This authoritative book explores the influential but controversial concept of military professionalism and its role in civil-military relations. Focusing on the evolution of military professionalism in ten key Asian countries, the authors investigate its conception, practice, and consequences. Combining the expertise of military officers and scholars from the region, the study argues that 'old professionalism' is on the rise in Asia as the role of coercion in governance has been reduced and the distribution of power has shifted away from the military in

favor of political and civil society.

Wars of the 21st Century New Threats, New Fears

In speculating about the future of the Mexican military, a clear understanding of that institution's past can prove invaluable. As is the case with most institutions, the role of the military will evolve in some form from the missions it has performed in the past. The history of the army in the 20th century, like that of the nation in general, has centered first and foremost on the Mexican Revolution, which ravaged the country for 10 years (1910-20) and cost the lives of close to two million people. The army played a critical role in both the revolution and its outcome. It forged most of the political institutions that subsequently emerged and that provided Mexico with the relative economic and political stability that the nation has enjoyed since the 1920s. Ironically, the country's political leaders--most of whom were military in the two decades immediately following the revolution--worked to eliminate the army's direct role in politics as a way of promoting stability. The formation of a dominant official political party in 1929 legitimized a formal role for the military in this sui generis political system. The founding of this predominant party, known today by the initials PRI (Partido Revolucionario Institucional), began the process of institutionalizing civilian political power.<sup>1</sup> The civilianization of power took away the army's direct role in

political decisionmaking, and the country's new civilian leaders assigned the military the role of guarantor and protector of the overall system. Since the 1920s, the army hierarchy had begun to inculcate its younger officers with an ideology replete with values such as loyalty, a revolutionary heritage, and patriotism. That unique ideology contributed significantly to the enthusiastic acceptance by army leaders of their new mission, which the military has proudly and jealously guarded to this day.<sup>2</sup> Historical events helped Mexico's new political elite consolidate its preeminent position. As early as 1940, the armed forces had begun to shift all their energies toward the traditional military functions of protecting the national sovereignty from a hostile enemy and preparing for war. In the aftermath of World War II, Mexico elected the first in an unbroken line of civilian presidents and dashed any military hopes of regaining political power. Consequently, the army turned its attention towards civic action and crisis management, where it has remained focused to the present day. As the year 2000 approaches, it is logical to draw on this history when considering the army's future missions, structure, and influence.

This new edition of Ian Hogg's classic is this century's ultimate reference work on the subject of military small arms. It has been fully updated and expanded (by 64 pages) to cover all small arms in military service during the 20th century and now

includes many arms listings and photographs that did not appear in earlier editions. Recognized internationally as the leading authority on military small arms, author Ian Hogg was given free rein on this edition; he has delivered the ultimate reference edition for all interested in the history of these arms. Arms coverage includes: Pistols Submachine Guns Bolt-Action Rifles Automatic Rifles Machine Guns Anti-Tank/Materiel Rifles Ammunition

This brand new edition of *The US Military Profession into the Twenty-First Century* re-examines the challenges faced by the military profession in the aftermath of the international terrorist attack on the United States on September 11, 2001. While many of the issues facing the military profession examined in the first edition remain, the 'new war' and international terrorism have compounded the challenges. The US military must respond to the changed domestic and strategic landscapes without diminishing its primary function—a function that now many see that goes beyond success on the battlefield. Not only has this complicated the problem of reconciling the military professional ethos and *raison d'être* with civilian control in a democracy, it challenges traditional military professionalism. This book also studies the notion of a US military stretched thin and relying more heavily on the US Federal Reserves and National Guard. These developments make the US military profession increasingly linked to public

attitudes and political perspectives. In sum, the challenge faced by the US military profession can be termed a dual dilemma. It must respond effectively to the twenty-first century strategic landscape while undergoing the revolution in military affairs and transformation. At the same time, the military profession must insure that it remains compatible with civilian cultures and the US political-social system without eroding its primary function. This is an invaluable book for all students with an interest in the US Military, and of strategic studies and military history in general.

The authors of the essays in this book focus on issues relating to strategy and war fighting as the world moves into the twenty-first century. In these ten essays, the authors examine the debate over the future of airpower, the unique threat of biological warfare, the impact of the information revolution on warfare, and how changes in military technology might require a rethinking of the principles of warfare. These authors address whether new military technologies, new organization for warfare, and new strategies for employing forces on future battlefields will produce a revolution in military affairs.

This new edition of the volume is presented on the wave of the success which had its first edition (2003). It is entirely updated to the current situation of the disciplines covered, and expanded with particular regard to the new missions,

that have become the main challenge for the armed forces in these first decades of the new millennium, with new insights to technological development toward so-called cyborg warriors, new forms of leadership and changes in soldier's identity and organisational culture. It is compiled of documents coming from various researchers at universities around the world as well as military officers devoted to the sector of study. Covered in this volume is a historical excursus of studies prior to contemporary research, interpretive models and theoretical approaches developed specifically for this topic, civic-military relations including issues surrounding democratic control of the armed forces, military culture, professional training, conditions and problems of minorities in the armed forces, an examination of the structural change within the military over the years including new duties and functions following the Cold War.

For more than 40 years, Rich's Vascular Trauma has been surgeons' #1 reference for the diagnosis and treatment of vascular injury in both civilian and military settings across the globe. Published in association with the Society for Vascular Surgery (SVS), the fully updated 4th Edition reflects recent changes in vascular injury patterns, wounds, and trauma care, drawing from current research and a wide variety of peer-reviewed publications to keep you up to date with the latest evidence-based management strategies and techniques. Written and

edited by vascular surgeons who are also trauma specialists—civilian and military experts who have proficiency in both open-surgical and endovascular techniques—this must-have reference offers a global perspective on every aspect of the broad spectrum of vascular trauma. Covers all vascular surgery procedures required to stop hemorrhage and restore perfusion in vessels in the limbs, junctional areas, torso and neck, including damage control techniques such as shunting, and endovascular techniques such as REBOA and stenting. Addresses pre-hospital, emergency department, surgical, and endovascular stages of treatment in developed, austere and deployed settings, including a rich section on vascular trauma in multiple international settings that provides important context for the global surgical community. Includes nine new chapters covering prehospital management, endovascular suites, stent-grafts, selective aortic arch perfusion, extracorporeal systems and gathering evidence in vascular trauma, and more. Presents surgical techniques in step-by-step, highly illustrated detail, as well as high level, strategic decision-making such as the logistics of setting up an endovascular trauma service. Includes a new, rapidly digestible "Tips and Tricks" section summarizing how to execute essential vascular maneuvers and management steps to ensure that patients get the best outcomes. Emphasizes the current management of civilian vascular injuries while

Wars in this century are radically different from the major conflicts of the 20th century--more amorphous, asymmetrical, globally connected, and unending. *Choreographies of 21st Century Wars* is the first book to analyze the interface between choreography and wars in this century, a pertinent inquiry since choreography has long been linked to war and military training. The book draws on recent political theory that posits shifts in the kinds of wars occurring since the First and Second World Wars and the Cold War, all of which were wars between major world powers. Given the dominance of today's more indeterminate, asymmetrical, less decisive wars, we ask if choreography, as an organizing structure and knowledge system, might not also need revision in order to reflect on, and intercede in, a globalized world of continuous warfare. In an introduction and sixteen chapters, authors from a number of disciplines investigate how choreography and war in this century impinge on each other. Choreographers write of how they have related to contemporary war in specific works, while other contributors investigate the interconnections between war and choreography through theatrical works, dances, military rituals and drills, the choreography of video war games and television shows. Issues investigated include torture and terror, the status of war refugees, concerns surrounding fighting and peacekeeping soldiers, national identity tied to military training, and more. The anthology is of interest to scholars in dance, performance, theater, and cultural studies, as well as the social sciences.

Worldwide political changes have presented a unique opportunity for forging a new basis of international security relations. The end of the cold war, the dissolution of the Soviet Union, and the ascending role of the United Nations in regional security affairs have transformed the driving issues of international security. These changes both heighten the demand and offer the

potential for global cooperation on an unprecedented scale. Traditional security preoccupations and the foundations of past strategy—based on preparation for massive military confrontation—are no longer appropriate. Now world leaders must find alternative strategies to ensure international safety. This book brings together a prominent group of experts, including several recently appointed government officials, to examine an alternative form of security, one that emphasizes collaborative rather than confrontational relationships among national military establishment. Global Engagement offers a complete analysis of the concept of cooperative security, which seeks to establish international agreements to regulate the size, technical composition, investment patterns, and operational practices of all military forces for mutual benefit. It explains how cooperative security also aims to create mechanisms to prevent the proliferation of weapons of mass destruction and regional conflict. The contributors identify the trends motivating the movement toward cooperative security and analyze the implications for practical policy action. They examine the problem of controlling advanced conventional munitions, analyze an integrated control arraignment, discuss international principles of equity and their relationship to problems of security, and offer regional political perspectives while considering social regional security problems. With the altered security environment, cooperation has clearly become the new strategic imperative. Policymakers are challenged to dispose of large arsenals of conventional and nuclear weapons and redirect their efforts to support preventative management of security conditions. Leading the discussion of the security challenges ahead, the authors of this volume debate the utility of cooperative engagement for future strategy.

international conference Dying and Death in 18th-21st Century Europe (ABDD). It invites you on a fascinating journey across the last three centuries of Europe, with death as your guide. The past and present realities of the complex phenomena of death and dying in Romania, the United Kingdom, Bulgaria, Serbia, the Czech Republic, the Netherlands, and Italy are dealt with, by authors from varying backgrounds: historians, sociologists, priests, humanists, anthropologists, and doctors. This is yet more proof that death as a topic cannot be confined to one science, the deciphering of its meanings and of the shifts it effects requiring a joint, interdisciplinary effort.

Recent advances in ultra-high-power lasers, including the free-electron laser, and impressive airborne demonstrations of laser weapons systems, such as the airborne laser, have shown the enormous potential of laser technology to revolutionize 21st century warfare. Military Laser Technology for Defense, includes only unclassified or declassified information. The book focuses on military applications that involve propagation of light through the atmosphere and provides basic relevant background technology. It describes high-power lasers and masers, including the free-electron laser. Further, Military Laser Technology for Defense addresses how laser technology can effectively mitigate six of the most pressing military threats of the 21st century: attack by missiles, terrorists, chemical and biological weapons, as well as difficulty in imaging in bad weather and threats from directed beam weapons and future nuclear weapons. The author believes that laser technology will revolutionize warfare in the 21st century.

Governing Military Technologies in the 21st Century is one of the first books to tackle the big five technological threats all in one place: nanotech, robotics, cyberwar, human enhancement, and, non-lethal weapons, weaving a historical, legal, and sociopolitical fabric into a discussion of their development, deployment, and, potential regulation.

In this edited book, leading scholars and analysts trace the origins, evolution and the current state of Indo-US strategic cooperation. During the Cold War, owing to opposing grand strategies, the two states frequently found themselves at odds. With the end of the Cold War and the demise of the Soviet Union, Indo-US security cooperation started in a fitful fashion, but in recent years it has acquired considerable stability. The armed forces of the two states have participated in exercises on land, sea and air and have also carried out joint humanitarian missions. Drawing on new information and with contributions from both academics and policy makers, this wide-ranging volume analyzes the strategic convergence of the world's two largest democracies, whilst explaining why important differences do remain. These notably include questions pertaining to the future of India's nuclear and ballistic missile programs, US-Pakistan ties and India's links with Iran. This volume will be of great interest to students of South

Asian politics, Asian security, US foreign policy and security studies in general. This book examines the ways in which European democracies, including former communist states, are dealing with the new demands placed on their security policies since the cold war by transforming their military structures, and the effects this is having on the conceptualisation of soldiering. In the new security environment, democratic states have called upon their armed forces increasingly to fulfil unconventional tasks – partly civilian, partly humanitarian, and partly military – in most complex, multi-national missions. Not only have military structures been transformed to make them fit for these new types of deployments, but the new mission types highlight the necessity for democracies to come to terms with a new image and ethos of soldiering in defence of a transnational value community. Combining a qualitative comparison of twelve countries with an interdisciplinary methodology, this edited volume argues that the ongoing transformations of international politics make it necessary for democracies to address both internal and external factors as they shape their own civil-military relations. The issues discussed in this work are informed by Democratic Peace theory, which makes it possible to investigate relations within the state at the same time as analysing the international dimension. This approach gives the book a systematic theoretical framework which distinguishes

it from the majority of existing literature on this subject. This book will be of much interest to students of civil-military relations, European politics, democratisation and post-communist transitions, and IR in general.

In *On Military Memoirs* Esmeralda Kleinreesink offers insight into military books: the writers, their writing motivation, the publishers and the plots. Every Afghanistan war autobiography from the US, the UK, Germany, Canada and the Netherlands is compared quantitatively and qualitatively.

The United States Army, along with its sister services, is struggling to create effective doctrinal concepts for warfighting in the Information Age. Man's ability to manipulate and transport information at light speed is changing the conduct of military operations. While the services agree that 'Information Superiority' is key to decisive operations, there is little consensus as to how to achieve it and what the conduct of 'Information Operations (IO)' should entail. The various conceptions for IO can generally be understood as one of two types: IO as an integrating strategy or IO as a capability. Each of these viewpoints emanates from a distinctly different basic conception, or theory, of the nature of information; and each carries vastly different implications for military doctrine. Carried to its logical conclusion, the IO-as-strategy mindset demands a fundamental reformulation of all warfare. The U.S. Department of Defense must identify and

articulate a relevant and theoretically sound definition of information before it can develop practical and effective doctrine for warfighting in the 21st century.

This volume examines how the U.S. military must rebuild in the wake of Iraq/Afghanistan, and refocus its power projection to face the new challenges emerging in the Pacific and with China. • Examines the nature of the destabilizing threat that China presents to the power balance of the Pacific, along with how the United States can work with its allies to shape a 21st-century strategy • Discusses in detail the necessity for reshaping the U.S. military after the land wars in Iraq and Afghanistan, and the ways in which American forces can be rebuilt for the future • Explains why the evolving Pacific theater is an area of critical operations and will require significant change in terms of how U.S. forces operate to deal with emerging threats • Assesses how new capabilities associated with emerging technologies—notably the Osprey, the F-35 aircraft, the Aegis Combat Systems, and a number of new European systems—allow new opportunities to work with our allies

This paper examines current policy and recommends considerations for developing a military strategy for the 21st century. It reviews the existing National Security Strategy (NSS) and current National Military Strategy (NMS) to frame requirements for a future NMS. It will identify what kind of military is required for the future emerging security environment of the new millenium. It will also explore the type of force structure necessary for this changing security environment. Finally and most critically, it will

challenge the remnants of the Cold War apparatus that supported a strategy of containment to determine its relevance for the imperative of engagement.

As asymmetric 'wars among the people' replace state-on-state wars in modern armed conflict, the growing role of military medicine and medical technology in contemporary war fighting has brought an urgent need to critically reassess the theory and practice of military medical ethics. *Military Medical Ethics for the 21st Century* is the first full length, broad-based treatment of this important subject. Written by an international team of practitioners and academics, this book provides interdisciplinary insights into the major issues facing military-medical decision makers and critically examines the tensions and dilemmas inherent in the military and medical professions. In this book the authors explore the practice of battlefield bioethics, medical neutrality and treatment of the wounded, enhancement technologies for war fighters, the potential risks of dual-use biotechnologies, patient rights for active duty personnel, military medical research and military medical ethics education in the 21st Century.

This Festschrift commemorates the 50th anniversary of the foundation of the Clausewitz-Society in the Federal Republic of Germany of 1961. This volume follows the intentions of the Clausewitz-Society as described by one of its former presidents: "to view the current tasks of politics and strategy as reflected in the insights of Carl von Clausewitz and thus examine which of the principles and insights formulated by Clausewitz are still important today and are thus endowed with an enduring validity".

The board and the members of the Clausewitz-Society therefore supported the idea to examine how and when the works of Clausewitz have been interpreted in selected countries of our world; further, the goal here has been to analyze the role that Clausewitz's thought still plays in these countries. This book is the paperback version of the 2011 published hardcover.

Recognized as "Europe's Noam Chomsky," Ignacio Ramonet looks at how the world has changed since 9/11.

This edited volume explores and analyses strategic thinking, military reform and adaptation in an era of Asian growth, European austerity and US rebalancing. A significant shift in policy, strategy and military affairs is underway in both Asia and Europe, with the former gaining increasing prominence in the domain of global security. At the same time, the world's powers are now faced with an array of diverse challenges. The resurgence of great power politics in both Europe and Asia, along with the long term threats of terrorism, piracy and sustained geopolitical instability has placed great strain on militaries and security institutions operating with constrained budgets and wary public support. The volume covers a wide range of case studies, including the transformation of China's military in the 21st century, the internal and external challenges facing India, Russia's military modernization program and the USA's reassessment of its strategic interests. In doing so, the book provides the reader with the opportunity to conceptualize how strategic thinking, military reform, operational

adaptation and technological integration have interacted with the challenges outlined above. With contributions by leading scholars and practitioners from Europe and Asia, this book provides a valuable contribution to the understanding of strategic and operational thinking and adjustment across the world. This book will be of much interest to students of military and strategic studies, security studies, defence studies, Asian politics, Russian politics, US foreign policy and IR in general.
