advanced driver assistance systems; includes review questions and exercises at the end of each chapter. The insights offered by this practical guide will be of great value to graduate students, academic researchers and professionals in industry seeking to learn about the advanced methodologies in automotive connectivity and cybersecurity.

Mapping Agencies (NMA), Government Departments, and private business. Generalisation of Geographic Information: Cartographic Modelling and Applications provides detailed review of state of the art technologies associated with these challenges, including the most recent developments in cartometric analysis techniques able to support high levels of automation among multi scale derivation techniques. The book illustrates the application of these ideas within existing and emerging technologies. In addition to providing a comprehensive theoretical underpinning, the book demonstrates how theoretical developments have translated into commercial systems deployed within NMAs. The book explores relevance of open systems in support of collaborative research and open source web based map services. State of the art review on multi scale representation techniques Detailed consideration of database requirements and object modeling in support of emerging applications (3D, mobile) and innovative delivery (map generalisation services) Illustration through existing map production environment implementations Consolidated bibliography (680 entries), 200 illustrations, author and subject index

Developments in technologies have evolved in a much wider use of technology throughout science, government, and business; resulting in the expansion of geographic information systems. GIS is the academic study and practice of presenting geographical data through a system designed to capture, store, analyze, and manage geographic information. Geographic Information Systems: Concepts, Methodologies,

Tools, and Applications is a collection of knowledge on the latest advancements and research of geographic information systems. This book aims to be useful for academics and practitioners involved in geographical data.

The Web has come a long way since the first VRML conference, VRML '95, was held in San Diego in December 1995. The conference was known as VRML 'xx until 2001 when it was renamed the Web3D Symposium. This year the Web3D community attains a significant landmark, the 10th conference in the series. From San Diego in 1995, the conference moved to Monterey for 97 and 98, then to Europe (Paderborn in Germany) for 99, back to Monterey in 2000, Paderborn in 2001, Tempe Arizona in 2002, Saint Malo, France, in 2003, Monterey in 2004 and now, for the first time, Wales (UK) for 2005. Proceedings of all 10 conferences have been published by ACM Press and are incorporated into the ACM Digital Library. The Web3D Consortium and the Web3D community of researchers and practitioners works long and hard to foster the development and promote the use of International Standards for 3D graphics on the World Wide Web. This year has seen, among other things, the approval and publication of the X3D Specification as an ISO/IEC International Standard (ISO/ IEC 19775:2004), the emergence of the Medical Working Group, and new initiatives concerning Learning, Education and Training. This volume contains the papers accepted for
