Originally, the term “hacker” referred to a programmer who was skilled in computer operating systems and machine code. Today, it refers to anyone who performs hacking activities. Hacking is the act of changing a system’s features to attain a goal that is not within the original purpose of the creator. The word “hacking” is usually perceived negatively especially by people who do not understand the job of an ethical hacker. In the hacking world, ethical hackers are good guys. What is their role? They use their vast knowledge of computers for good instead of malicious reasons. They look for vulnerabilities in the computer security of organizations

and businesses to prevent bad actors from taking advantage of them. For someone that loves the world of technology and computers, it would be wise to consider an ethical hacking career. You get paid (a good amount) to break into systems. Getting started will not be a walk in the park—just as with any other career. However, if you are determined, you can skyrocket yourself into a lucrative career. When you decide to get started on this journey, you will have to cultivate patience. The first step for many people is usually to get a degree in computer science. You can also get an A+ certification (CompTIA)—you must take and clear two different exams. To be able to take the qualification test, you need to have not less than 500 hours of experience in practical computing. Experience is required, and a CCNA or Network+ qualification to advance your career.

The Certified Ethical Hacker program is the most desired information security training program any information security professional will ever want to be in. To master the hacking technologies, you will need to become one, but an ethical one! This certification serves as a means of educating and training professionals to be able to understand and identify vulnerabilities and weaknesses within a system. Therefore, as an Ethical Hacker, the task will be yours to try to penetrate the computer systems and network of a company using the tools that a malicious hacker would. The main difference between you and a malicious hacker is that your method of hacking is legal in that you have permission from the company to do so.
