For the millions of individual stock investors who want to improve their results-and for beginners who want to get started on the right foot-Sensible Stock Investing: How to Pick, Value, and Manage Stocks is a comprehensive yet easy-to-follow guide. Written for the busy individual, Sensible Stock Investing presents the investment process in three phases: rating companies for their intrinsic soundness; valuing stocks to find advantageous purchase prices; and managing a portfolio once it is established. Author David Van Knapp breaks these stages into discrete steps and shows how the individual investor-in just a few hours per month-can outperform most mutual funds by investing intelligently and minimizing risk at every stage. As you will see from the two actual, proven portfolios described in Sensible Stock Investing, you don't have to be a mathematical genius or investment professional to succeed in the stock market! Whether you are an experienced investor or just getting started, Sensible Stock Investing describes straightforward methods, provides the forms and tools you need, and shows you what to do every step of the way to successfully navigate the stock market with intelligent investment practices. A timely overview of new psychological interventions in this exciting and emerging field, Working with People at High Risk of Developing Psychosis: A Treatment Handbook presents the most up-to-date progress in the identification of individuals who are at ultra high risk of developing a psychotic illness. The book focuses on a range of psychological interventions that are currently being developed, tested, and used in order to alleviate these early symptoms and attempt to delay or even prevent the onset of a psychotic illness. Even for those who will not go on to develop an illness, such interventions are helpful in the alleviation of their presenting symptoms. This practical treatment handbook addresses a wide range of issues presented by "at risk" clients. Specific chapters, written by experts in that particular area, cover stress management, co-morbidity, substance misuse, family work and group therapy.

The European Federation for Medical Informatics has established itself as a regional body coordinating activity in medical informatics. The Congress in Toulouse, MIE-81, from 9 - 13 March 1981, is the third congress in the series following MIE-78 in Cambridge, and MIB-79 in Berlin with a gap during 1980 for the world congress MEDINFO-80 in Tokyo. The rationale behind all these congresses is the scientific need to share results and ideas and the educational need to train a wide variety of professional staff in the potential of health care and medical informatics. All the caring professions are involved, doctors, scientists, nurses, para-medical staff, administrators, health care planners, community physicians, epidemiologists, statisticians, operations analysts together with specialists from the computing profession dealing with system analysis, hardware, software, languages, data-bases and the marketing of systems. Medical Informatics is a very wide subject with ramifications throughout the health care and preventive services; it offers a key to the monitoring and improvement of patient care and to the provision of a healthier environment. The collection and evaluation of relevant data improves our understanding of the ways in which health care is provided while the availability of cheaper computer hardware and more versatile software enables us to design and implement more revealing and intelligent medical systems. Even though typical systems take a substantial amount of time to design, implement and evaluate, there is the continuing need for informaticians to assess the current state of development.

Research evidence concerning the precursors (a sign or symptom that heralds another) and prodromes (an early or premonitory symptom of a disease) of the various mental disorders is growing but is at present widely dispersed and inaccessible. Clinicians have to rely on their own experience, which is often limited, when faced with several delicate diagnostic and treatment issues. This book aims to approach for the first time in a comprehensive way this emerging area of clinical psychiatry. The World Health Organisation has found that mental disorders such as depression and psychosis rank in the top 10 of leading causes of disability in the world, creating a significant social, emotional and economic burden for young people, their families and society. Early detection of these potentially disabling disorders and treatment at the time of initial onset can greatly improve long-term outcomes and effect dramatic cost-savings. The related Birchwood title has sold nearly 2300 copies and is popular at psychiatry conferences. From an R&D perspective, industry have a stake in this area. Obviously, if biomarkers or other prodromal evidence can be determined in various disorders, then drugs will start to be dispensed earlier. The topic has increased in popularity as a subject for satellite symposia e.g Jeffrey Lieberman chaired the Bristol Myers Squibb symposia at the American Psychiatric Association. This dealt with early intervention in schizophrenia and the need for novel approaches in the prodromal phase. In addition, more symposia (and research) look at disorders "across the lifespan." This phrase indicates an approach to research, diagnosis and treatment from a more quality-of-life vantage and early diagnosis is part of this movement.

Media & Values' provides a major empirical investigation into the moral performance of the media. Based on 22 focus groups, three nationally representative questionnaire surveys and interviews with senior media personnel and regulators, this book charts the changing position of the media as a moral voice representing ways in which we live. A central theme of the study is how television has lost moral authority to pronounce on the way we should live and instead has increasingly reflected, and given visibility to, the values and norms of a variety of social groups. The book examines not just the lack of moral certainty that has overtaken television, but the lack of moral certainty of the audience in discussing social, moral and political issues. Particular attention is also given to the whole question of privacy in modern society and the performance of the media in intruding into private performances.
