- Mind Maps for clarity of Concepts.

Over time, a product made in a specific place can develop a unique reputation. This reputation is often due to special characteristics present in the place: its people, its climate and its landscape. There are thousands of examples. In the food and drinks sector there are fruits and vegetables, wines, cheeses and cured meats: Champagne; Cheddar, Parma ham and Tipperary turnips. In manufacturers there are Persian carpets, Murano glass, Toledo steel and Japanese electronics. Should all these reputations be protected by law and if so how? This book "The Law of Geographical Indications" addresses these questions. The book examines what names can and cannot be protected in national and international law and the nature of the protection given. In the last years there has been a rapid expansion of the protection given to geographical indications. The book looks at the specific systems adopted in some countries and the general systems in others. Protection is most developed in Europe and specific attention is given to the rules in the European Union and the bilateral agreements the EU has forged with many third

countries. The book also examines protection in international law from the 1883 Paris Convention on the protection of intellectual property in general to the more recent TRIPs Agreement in the WTO. Also examined are the two most controversial legal issues surrounding the protection of geographical indications, namely, conflicts between trademarks and geographical indications and the generic character of certain names.

UPSC Prelims GS Paper-1: Previous Year Questions with Answers & Explanations Prelims Practice Workbook Paper-1: Previous Year Based Practice Questions Based MCQs Updated Prelims Practice Workbook paper -1 (GS) (Previous 10 Year Based Practice Questions)

We live in an era in which knowledge generation alone can no longer work if it does not connect with the scientific developments in brain and cognitive domains. In our age, significant improvements in information and computer technologies are encouraged factors for scientists, researchers and instructors to re-build and re-design the knowledge. Nowadays an educational project as a scientific activity is considered to be more meaningful as long as it serves cognitive purposes. The scholars who are expected to be aware of the fact that they are living in the age of cognition, communication and computer, do not only deal with current educational problems but also have to try reconstructing and improving the quality of education according to the day. If we take account of all these, the book Current Debates in Education, a collection of the papers about various studies in the fields of Education, presented in The VII. International Congress on CUDES 2018 serves precisely this purpose. CUDES 2018 on Education book presents thirteen leading studies about multiple educational areas on different topics varying from developments in educational sciences and technologies to new perspectives about teaching and learning strategies most of which based on cognitive skills.
