Grounded in the life experiences of children, youth, teachers, and caregivers, this book investigates how implicit bias affects multiracial kids in unforeseen ways. Drawing on critical mixed-race theory and developmental psychology, the authors employ radical listening to examine both how these children experience school and what schools can do to create more welcoming learning environments. They examine how the silencing of mixed-race experiences often creates a barrier to engaging in nuanced conversations about race and identity in the classroom, and how teachers are finding powerful ways to forge meaningful connections with their mixed-race students. This is a book written from the inside, integrating not only theory and research but also the authors' own experiences negotiating race and racism for and with their mixed-race children. It is a timely and essential read not only because of our nation's changing demographics, but also because of our racially hostile political climate. Book Features: Examination of the most contemporary issues that impact mixed-race children and youth, including the racialized violence with which our country is now reckoning. Guided exercises with relevant, action-oriented information for educators, parents, and caregivers in every chapter. Engaging storytelling that brings the school worlds of mixed-race children and youth to life. Interdisciplinary scholarship from social and developmental psychology, critical mixed-race studies, and education. Expansion of the typical Black/White binary to include mixed-race children from Asian American, Latinx, and Native American backgrounds.

In the mid-1970s a new type of therapy called "therapeutic touch"(TT) was introduced into the practice of nursing. Its proponents claimed that an energy field surrounding the body could be manipulated by skilled practitioners to produce healing effects for a wide variety of illnesses. Despite the fact that there were no reliable controlled studies of TT, some nursing journals and nursing schools uncritically embraced this new direction in therapy. Today the number of nurses practicing therapeutic touch is reported by proponents to be as high as 40,000. In light of the popularity of this new therapy, a rational, critical evaluation of its effectiveness is long overdue. This anthology of research articles illuminates every aspect of the subject, including the physics of the claimed "human energy field," which is an essential component of the theory underlying TT; detailed discussions of the most recent research into the efficacy of TT; an account of the origins and history of the practice, plus a separate review of skeptics' work to shine the light of reason on it; a discussion of how archaeology and feminism have become involved in TT; several reports that present the best case for this new therapy; a discussion of the way the media have handled the topic; and a consideration of the ethical implications of this practice. Scholarly yet accessible to the lay person, this authoritative review of an important but controversial new therapy will make a valuable contribution to the libraries of nursing schools, universities, and hospitals, and should be of interest to anyone considering the use or practice of therapeutic touch.
