Child life is a profession that draws on the insights of history, sociology, anthropology and psychology to serve children and families in many critical stress points in their lives, but especially when they are ill, injured or disabled and encounter the hosts of caregivers and institutions that collaborate to make them well. Children and their families can become overwhelmed by the task of understanding and navigating the healthcare environment and continue to face challenges through their daily encounters. It is the job of child life professionals to provide care and guidance in these negotiations to serve as culture brokers, interpreters of the healthcare apparatus to family and child and the child to medical professionals. Despite the best efforts to provide quality, sensitive psychosocial care to children and their families, they remain vulnerable to lingering aftereffects. The goal of this revised edition is to help prepare child life specialists to deliver the highest level of care to children and families in the context of these changing realities. Each chapter has been substantially revised and two new chapters have been added. This book will be a valuable resource for not only child life specialists but also nurses, occupational and recreational therapists, social workers and other hospital personnel.

This book is a companion manual to the author's best-selling, *What Works When with Children and Adolescents*. This second volume provides additional creative counseling strategies, expanded coverage of developmental applications, and over 80 entirely new interventions. The book addresses both internalizing and externalizing disorders, such as anxiety, depression, stress, grief, low frustration tolerance, anger, bullying, and acting out. It also covers self-defeating behaviors such as self-injury, eating disorders, substance abuse, and suicidal behavior. The interventions teach behavioral and emotional self-control by helping young people understand the connection between thoughts, feelings, and behaviors. Activities include games, imagery, art and music activities, bibliotherapy, experiential activities, behavioral rehearsal, and more. An accompanying CD provides reproducible forms, worksheets, and student handouts. The counseling strategies are designed to motivate young clients to participate in their own therapy and learn coping skills that they can use throughout their lifetime for dealing realistically with situational and developmental problems. The counseling approach is based on the principles of Rational Emotive Behavior Therapy (REBT)--a short-term, problem-solving approach that is particularly useful in school settings. The counseling strategies presented are designed to help young people not just feel better, but to help them get better.

Although the field of child and adolescent development seems to be an easy one in which to provide active learning opportunities to students, few textbooks currently exist that actually do this. *Child Development: An Active Learning Approach* includes the following key features: - Challenging Misconceptions: true/false or multiple choice tests are incorporated at the beginning of each chapter to specifically address topics that are sources of misunderstanding amongst students. - Activities with children and adolescents: 'hands-on' activities that complement the ideas of the text, as an integral part of the text, rather than as "add-ons" at the end of each chapter. - 'The journey of research' will introduce students to the process of research that leads from early findings to more refined outcomes through real-life examples - 'Test Yourself' sections include activities that cause students to reflect on an issue through their own experiences to bring about increased motivation and understanding of a specific topic. - The Instructor's Resource CD-ROM includes a computerized test bank, PowerPoint Slides, sample syllabi, suggested in-class learning activities, and homework assignments. - The Student Study Site includes interactive videos, self-quizzes, key term flashcards, SAGE journal articles with accompanying exercises, and web links with accompanying exercises.

This book argues that issues of sexual diversity are inextricably interwoven into the basic concerns of pre-service teacher education. How do we make our students aware of assumptions regarding masculinity, femininity, and sexuality that arise from what is presented, represented, or omitted from curricula and classroom practice? What do we say about homophobia and heterosexism as we anticipate the administrative hierarchies, school cultures, parent and community politics they will encounter as teachers? What special challenges might face a teacher (straight or gay) who discusses sexual orientation in a high school classroom, or responds to a homophobic remark in the hallway or the cafeteria? How should we prepare a teacher for a parent

conference with two moms or two dads? The essays in this volume range from an analysis of gay stereotypes in teacher education textbooks, to a discussion of queer multiculturalism, to personal accounts by lesbian and gay teacher educators and heterosexual allies who are challenging homophobia and heterosexism in their own classrooms and programs. All agree that education for sexual diversity is as important as education about all other forms of difference, and that future teachers need to know how to create safe spaces for lesbian and gay students, along with the children of gay families who are increasingly a part of the classroom landscape.

Through different approaches like toys and play, children explore and know the rules and symbols of their communities and recreate roles and situations that reflect their sociocultural and 21st century plurilingual world.
