My Story! This summer I started learning Dutch. I bought myself a flashcards starter, a picture dictionary and beginner's book. I have to admit that after two weeks of using them I gave them away for free to my friends and I let them suffer from that poor selection of language education. What was the reason for my decision? Well, I was starting from scratch. I knew nothing about the Dutch language. Products I bought, despite being for "beginners" were teaching me complete nonsenses. Across many flashcards, I immediately have thrown away there were words like hooked nose or city council. What is the use for them for such a beginner like me? I couldn't say a sentence but I was able to name all the body parts and seasons. What's the point? I decided to change that so I have created a list of words I need to memorize to be able to read and understand at least half of the text in my video game magazine. I only needed 50 most frequent words and some knowledge of English to figure out what's going on in the text. By learning the right vocabulary I only needed 50 words to understand half of the text instead of two sets of flashcards 500 words each. Try for yourself and let me know what you think. Frequency study? There are many words that you use way more often than others, which makes them more valuable to know. Therefore the simplest way to make a progress in your target language is to learn the right vocabulary. How many words? 250 - enough to go on holidays 1000 - covers 85% of speech 3000 - 98%

of the spoken language As you see the key is to learn the right words. What's Inside? I selected the most frequently used words to give you the basics you need to understand the language. There are more than 300 words grouped into categories. Some words are also used in example sentences to help you understand the context.

Since the 1960s quantitative linguistics has undergone a great development marked especially by attempts to work systematically with language phenomena on all language levels. Besides traditional areas where significant results were already achieved before the 60s (phonology, graphemics and lexicology), quantitative linguistics has now also penetrated into morphology, syntax, stylistics, history and typology of languages and, more recently, into semantics. This book gives a comprehensive account of the various developments and applications in quantitative linguistics. After an overview of methods used in quantitative linguistics, it discusses the main areas: lexical statistics, grammatical statistics and semantics statistics, with reference to a great number of studies of different languages and language families. Chapter 4 deals with other domains (phonology, graphemics, stylistics, typology, development of languages, word-formation), Chapter 6 deals with various applications, and Chapter 7 discusses the relationship between quantitative linguistics and the computer. The volume is completed by an extensive list of references and indices of names and of subjects.

The study of languages in contact is an ever-relevant topic in linguistics, especially at present times when increasing globalization leads to a number of new contact situations. This volume features ten papers on various aspects of language contact by leading specialists in the field. In these papers, contact-induced change in a wide variety of languages is approached from various perspectives, reflecting the current state of affairs in language contact studies. The first main theme in the volume is related to the linguistic effects of migration, both in the present and in the past, and both in the standard language spoken by ethnic minorities, and in immigrant languages that are influenced by the standard. The second theme concerns border areas, a traditional treasure trove for the study of contact phenomena. The third theme is about contact effects without physical contact, as well as the role played by translators in this process.

This volume examines some of the ways in which dictionary use has been studied, considers the problems encountered by researchers in this field, and presents a series of experiments which explore fundamental questions concerning the use of dictionaries by learners of English as a foreign language. - Are dictionaries helpful in examinations? Does defining style affect consultation success? Do dictionaries benefit some kinds of learners more than others? How useful are illustrative examples? The author concludes with an analysis of current trends in the design of dictionaries for learners of English, and considers the possible impact of new electronic formats on dictionary use.

The fourteen papers in this volume Studies in Dutch Phonology were collected by the editors in the course of 1977 and 1978, at the request of the editorial board of Dutch Studies. In their opinion the collection represents a fair cross-section of current research done in the field of phonology both inside and outside the Netherlands, and therefore constitutes a very suitable starting point for the new series Dutch Studies of the Internationale Vereniging voor Neerlandistiek. In the various contributions one will find treated several issues of current phonological interest, such as phonotactic constraints (by Brink), abstractness (by Goyvaerts, Robinson, Tiersma, Trommelen and Zonneveld), stress-assignment and vowel-reduction (by Van Marle and Predota), the interaction between phonology and morphology (by Kooij, De Rooij-Bronkhorst, and Schultink), rule ordering (Taeldeman), and lexical diffusion (Gerritsen and Jansen, and Zonneveld). These issues are discussed in relation to a number of well-known traditional topics of Dutch phonology, such as: affixal stress-attraction; constraints on consonant-clusters; separable and inseparable verb-forms; stress and vowel reduction in derived vs. non derived, and 'native' vs. 'foreign' Dutch words; Auslautverhartung and assimilation of voice in obstruent-clusters; regularity and irregularity in open syllable lengthening, diminutive formation, plural formation, and the weakening of intervocalic d; and the properties and phonological representation of diphthongs. (Frans van Coetsem's paper "Loan Phonology: the Example of Dutch", originally intended as a contribution to this volume, but not completed as it went to the press, will appear elsewhere.
