

A Novel Design Of Llc Resonant Converter For Wide Output

Embedded and Networking Systems: Design, Software, and Implementation explores issues related to the design and synthesis of high-performance embedded computer systems and networks. The emphasis is on the fundamental concepts and analytical techniques that are applicable to a range of embedded and networking applications, rather than on specific embedded architectures, software development, or system-level integration. This system point of view guides designers in dealing with the trade-offs to optimize performance, power, cost, and other system-level non-functional requirements. The book brings together contributions by researchers and experts from around the world, offering a global view of the latest research and development in embedded and networking systems. Chapters highlight the evolution and trends in the field and supply a fundamental and analytical understanding of some underlying technologies. Topics include the co-design of embedded systems, code optimization for a variety of applications, power and performance trade-offs, benchmarks for evaluating embedded systems and their components, and mobile sensor network systems. The book also looks at novel applications such as mobile sensor systems and video networks. A comprehensive review of groundbreaking technology and applications, this book is a timely resource for system designers, researchers, and students interested in the possibilities of embedded and networking systems. It gives readers a better understanding of an emerging technology evolution that is helping drive telecommunications into the next decade.

Emily Parker had it all—a loving a husband, a successful landscaping business they ran together, a beautiful home in Colorado, and a baby on the way. But when her husband becomes ill and passes away, she's left with some difficult questions. Should she stay in the home they built together? Should she sell the business? Will she be able to raise the baby on her own? Gavin Bledsoe has traded in a successful Wall Street career and a failed relationship for the simplicity and solitude of his childhood hometown. Though his last relationship failed, a part of him wants to love again. When he finds out his best friend and wife are going to have a baby, and with his mom's constant interest in his love life, he begins to consider dating again. While back home visiting her family over Thanksgiving, Emily runs into Gavin at the grocery store. Still grieving for her husband, she's not ready to date, but she is moved by Gavin's compassion and agrees to dinner with him as friends. The two connect, but both realize the timing is not right. By Christmas, Emily decides to sell her home and business and move back to her hometown. Will the timing finally be right for Gavin and Emily? Will she overcome her grief and find Joy in the Morning? Author Elizabeth Howell lives in southwest Colorado with her husband and two children.

Today, computer science engineering and telecommunications are two important areas linked and even inseparable. This is obvious for the user who connects the modem of his computer on his mobile phone or telephone line to access, via the global data network, the information available on the servers. The both domains are evolving rapidly and the development of new architectures of systems dedicated to telecommunications and computing becomes essential. Especially, wireless transmission systems with high data rate. Two parts of these systems should be developed software and hardware. Another area that is renewable energies becomes more attractive for researchers in order to develop new conversion systems with good performances, and a good optimization of energy. For example, in wireless sensor systems, we try to develop new protocols permitting to have a good autonomy in terms of energy.

Design of a Modular Multiplier for Public-Key Cryptography Applications Using Residue Number System (RNS) and Signed-Digit Representation (SDR)
Public-Key Cryptosystems are prone to wide range of cryptanalyses due to its property of having key pairs one of them is public. Therefore, the recommended length of these keys is extremely large (e.g. in RSA and D-H the key is at least 2048 bits long) and this leads the computation of such cryptosystems to be slower than the secret-key cryptosystems (i.e. AES and AES-family). Since, the key operation in such systems is the modular multiplication; in this research a novel design for the modular multiplication based on the Montgomery Multiplication, the Residue Number Systems for moduli of any form, and the Signed-Digit Representation is proposed. The proposed design outperforms the current designs in the literature in terms of delay with at least 28% faster for the key of 2048 bits long. Up to our knowledge, this design is the first design that utilizes Signed-Digit Representation with the Residue Number System for moduli of any form.

"Updated, re-organized, and rewritten, this second edition of a bestseller covers cleaning processes, applications, management, safety, and environmental concerns. A two-volume set, it discusses cleaning process applications, management, and safety and environmental concerns. International contributors give the text a global viewpoint. Color illustrations, video clips, and animations that make the information accessible are available from the website. The handbook is available for purchase individually or as the two-volume set"--

In 1948, Cono Dennis boards a train to Temple, Texas. It is the same place he escaped at age 14, when yet another act of violence by his father finally pushed him over the edge. Now, Cono is no longer that skinny, tow-headed, battered kid. At eighteen years old, he is Master Sergeant at Lackland Army Air Force Base, a boxer, and the physical training instructor responsible for over 10,000 men. An invitation from his father to return to Temple and spar with him is too good to pass up. But once Cono throws his first punch, will he be able to stop?

This book constitutes the refereed proceedings of the 11th Annual Conference on Advanced Computer Architecture, ACA 2016, held in Weihai, China, in August

2016. The 17 revised full papers presented were carefully reviewed and selected from 89 submissions. The papers address issues such as processors and circuits; high performance computing; GPUs and accelerators; cloud and data centers; energy and reliability; intelligence computing and mobile computing. This is a familiar but timeless story of a man who worked his way up the ladder to seemingly have it all -- a loving wife, a lucrative position as a business entrepreneur, bountiful fortune, three finely raised children, and all the comforts and luxuries for a wonderful life. Yet, this very man had aberrant tendencies that would lead his marriage down rocky and murky pathways of lies, lust, kinky sex, deceptions, and betrayal! Yes, this is all too common amongst us, and yet, there is something distinctive in this particular life story. Read on and you will see how the turn of events impacts on the man's stoic and steadfast wife - how the cycle of unrequited emotional love, depression, anxiety, and desperation ferments in the young lady's psyche and eventually overpowers her despite her best efforts. The final turn of events reveals the true essence of this story.

You can't pretend forever. Alicia has been pretending for a long time. She pretends that her marriage isn't in trouble. She pretends she's okay with the nights alone and that she doesn't notice the growing distance between her and her husband. She pretends he's telling the truth. But pretending is a lot more difficult when Antonio Jamieson comes back into her life. He's the man she has claimed is nothing more than a friend. He's the man she has claimed she has no romantic past with. And she really believes that—but no else does, not even her husband. As others try to open her eyes to the truth about her feelings for Antonio, Alicia begins to open her eyes to the truth about her relationship with Patrick. Maybe things aren't okay after all. Maybe things need to change. Could it be time to stop Pretending? But what will happen if she stops pretending? Can she handle the truth? Can she handle the pain that's bound to come when everything is revealed? When the truth comes out, everything is going to change in Alicia's world. Her friends have their own truths to deal with, so there's really only person she can turn to—Antonio. Could true happiness be hers, or will she continue to pretend there's nothing between them? Will there be an end to her constant Pretending?

Nash Peterson is back from a mandatory leave and has regained his status as a detective. But, when he arrives at a crime scene to find his name written in blood, he wonders if he came back too soon. The guilt of his son's death returns, and the killer leaves something behind to throw Nash off course, teasing him with the knowledge that it's a game of revenge. Quickly, things escalate, and two other bodies linked to Nash emerge. As the lives of the ones closest to him are vanquished, Nash learns that a man killed during a drug raid years earlier had two sons, one in prison and one nowhere to be found. What he doesn't know is that the killer is closer than he thinks, the person responsible isn't who they appear to be, and they aren't working alone. With time becoming his nemesis, Nash races into what could be a trap and where he just might be taking his last

breath.

The biggest challenge in any marketplace is uncertainty. The major changes taking place in world economies, politics, and demographics has raised market uncertainty to its highest level in the past 50 years. However, with new markets opening up in emerging and developing economies, the opportunities have never been better. To compete in this challenging atmosphere, product design/redesign and manufacturing must be integrated to produce better quality products faster and cheaper. *Design Synthesis: Integrated Product and Manufacturing System Design* provides a conceptual framework and methodologies to do just that. The book explains how to integrate innovative product design with the design of a batch manufacturing system. It covers the technical and social aspects of integration, presents research and best practices, and embeds integration within a framework of sustainable development. It covers the two methods for achieving design synthesis: integration and harmonisation. Product, manufacturing system, and social system architectures are integrated (united or combined to form a whole that is greater than the sum of the parts). The concurrent processes to design the architectures are harmonised (made compatible or coincident with one another). Wide in scope, the book supplies a multi-disciplinary perspective and an extensive discussion on how to maintain integrity during the design process. The authors present research and practices that are difficult or almost impossible to find. They describe the different types of system lifecycles and include guidelines on how to select the appropriate lifecycle for a specific design situation.

The Code of Federal Regulations Title 10 contains the codified Federal laws and regulations that are in effect as of the date of the publication pertaining to energy, including: nuclear energy, testing, and waste; oil, natural gas, wind power and hydropower; climate change, energy conservation, alternative fuels, and energy site safety and security. Includes energy sales regulations, power and transmission rates.

Plasmonics is a rapidly developing field that combines fundamental research and applications ranging from areas such as physics to engineering, chemistry, biology, medicine, food sciences, and the environmental sciences. Plasmonics appeared in the 1950s with the discovery of surface plasmon polaritons.

Plasmonics then went through a novel propulsion in the mid-1970s, when surface-enhanced Raman scattering was discovered. Nevertheless, it is in this last decade that a very significant explosion of plasmonics and its applications has occurred. Thus, this book provides a snapshot of the current advances in these various areas of plasmonics and its applications, such as engineering, sensing, surface-enhanced fluorescence, catalysis, and photovoltaic devices.

This is a print on demand edition of a hard to find publication. Under current intellectual property laws, industrial designs (ID) may potentially be protected through design patents, trade dress, and copyright. In addition, the Vessel Hull Design Protection Act established a specialized, or sui generis, intellectual property right for the protection of boat hull designs.

Some experts argue that the present intellectual property regime does not adequately protect ID. Contents of this report: (1) ID and Intellectual Property: Copyright; Trade Dress; Design Patents; Vessel Hull Design Protection; (2) Current Issues in ID Protection: Intellectual Property Rights in Fashion Designs; U.S. Adherence to the Hague Convention; Auto Spare Parts; Judicial Developments Concerning ID Patents; (3) Issues in Innovation and Competition. 'Dance with me, soldier, until my fella gets here,' she yelled over the music. From that moment, Ben is permanently captivated by her. Unfortunately, Grace is Charlie's girl, and Charlie is Ben's best friend. As Ben and Charlie struggle to survive World War II, their friendship becomes strained when Ben learns a secret about Charlie and Grace's relationship. Night after night, Ben achingly listens to Grace's love letters, read aloud by Charlie, and wishes the words were meant for him; until one day when war ravages the boys' friendship, taking Charlie's life and leaving a dying request on his lips that Ben must do his best to fulfill. In From Letters to Grace, Ben battles more than flesh and blood as he aches to find love as well as bring others to Christ. He embarks upon a poignant journey, discovering the meaning of truth, courage, and honor along the way, and changing his life and the opinions of those around him forever as he relies on his flawed faith and trust in God to be his flawless guide.

After the sailing camp owner's suicide, eight teens find they have a boat to themselves. The 68 days of summer remaining are full of memorable events: encounters with wildlife and people, yacht races, pirate raids, a near fatal hunt for treasure, onboard parties, romance, and a call to heroism. Underlying the tale of adventures, however, is a subtle yet powerful story of awakening, of teens on the cusp of adulthood. They get to know that gap between who they are and who they want to be by experiencing tests of physical, emotional, and mental limits. A stirring debut, this novel examines issues of late adolescence with authenticity that will speak to YA readers.

Issues in Genetic Research / 2013 Edition is a ScholarlyEditions™ book that delivers timely, authoritative, and comprehensive information about Human Heredity. The editors have built Issues in Genetic Research: 2013 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Human Heredity in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Genetic Research / 2013 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

The last decades have seen remarkable advances in computer-aided design, engineering and manufacturing technologies, multi-variable simulation tools, medical imaging, biomimetic design, rapid prototyping, micro and nanomanufacturing methods and information management resources, all of which provide new horizons for the Biomedical Engineering fields and the Medical Device Industry. Advanced Design and Manufacturing Technologies for Biomedical Devices covers such topics in depth, with an applied perspective and providing several case studies that help to analyze and understand the key factors of the different stages linked to the development of a novel biomedical device, from the conceptual and design steps, to the prototyping and industrialization phases. Main research challenges and future potentials are also discussed, taking into account relevant social demands and a growing market already exceeding billions of dollars. In time, advanced biomedical devices will decisively change methods and results in the medical world, dramatically improving diagnoses and therapies for all kinds of pathologies. But if these biodevices are to fulfill present expectations, today's engineers need a thorough grounding in related simulation, design and manufacturing technologies, and collaboration between experts of different areas has to be promoted, as is

also analyzed within this handbook.

Every day we interact with thousands of consumer products. We not only expect them to perform their functions safely, reliably, and efficiently, but also to do it so seamlessly that we don't even think about it. However, with the many factors involved in consumer product design, from the application of human factors and ergonomics principles to reducing risks of malfunction and the total life cycle cost, well, the process just seems to get more complex. Edited by well-known and well-respected experts, the two-volumes of Handbook of Human Factors and Ergonomics in Consumer Product Design simplify this process. The first volume, Human Factors and Ergonomics in Consumer Product Design: Methods and Techniques, outlines the how to incorporate Human Factors and Ergonomics (HF/E) principles and knowledge into the design of consumer products in a variety of applications. It discusses the user-centered design process, starting with how mental workload affects every day interactions with consumer products and what lessons may be applied to product design. The book then highlights the ever-increasing role of information technology, including digital imaging, video and other media, and virtual reality applications in consumer product design. It also explores user-centered aspect of consumer product development with discussions of user-centered vs. task-based approach, articulation and assessment of user requirements and needs, interaction with design models, and eco design. With contributions from a team of researchers from 21 countries, the book covers the current state of the art methods and techniques of product ergonomics. It provides an increased knowledge of how to apply the HF/E principles that ultimately leads to better product design.

'My life was hard, and I had no love. That is what I always longed for so much, love—the real heartfelt kind of love, with hugs and kisses. So a lot of the time I daydreamed and pretended. I was the great pretender long before the song came out! As I sit here, my mind wanders back in time...' Come along on the journey as Frankie Oberlechner shares the tale of Charlea, a woman whose life was never easy, often terrible, but always blessed with joyous moments and God's protection. Charlea is looking back on her life and noticing something important—God has always been there for her. As a child, she found herself needing to act like a grown-up. Her mama and daddy were always drinking away the money. She had to act like a mother for her sister's children when she was only a child herself. Her daddy was abusive, threatening their very lives at times. But Charlea had her grandmother, whose home was a safe haven where she learned about God's love. There life was easier...until her grandmother passed away. Then it seemed as though Charlea would never find the light again. True friends were hard to come by, until she met Lin and June. Soon after she met Ben, they married, despite the fact that no one liked him. She thought life would be different, but Ben proved to be much like her daddy—an abusive alcoholic. As Charlea grew into a woman, she had many ups and downs. Charlea was caught in a terrible web—but then she was reintroduced to God, and things began to change. Join Charlea as she discovers the love she has always longed for and that Life Is Built around If.

With the ever-growing power of generating, transmitting, and collecting huge amounts of data, information overload is now an imminent problem to mankind. The overwhelming demand for information processing is not just about a better understanding of data, but also a better usage of data in a timely fashion. Data mining, or knowledge discovery from databases, is proposed to gain insight into aspects of data and to help people make informed, sensible, and better decisions. At present, growing attention has been paid to the study, development, and application of data mining. As a result there is an urgent need for sophisticated techniques and tools that can handle new fields of data mining, e. g. , spatial data mining, biomedical data mining, and mining on high-speed and time-variant data streams. The knowledge of data mining should also be expanded

to new applications. The 6th International Conference on Advanced Data Mining and Applications (ADMA2010) aimed to bring together the experts on data mining throughout the world. It provided a leading international forum for the dissemination of original research results in advanced data mining techniques, applications, algorithms, software and systems, and different applied disciplines. The conference attracted 361 online submissions from 34 different countries and areas. All full papers were peer reviewed by at least three members of the Program Committee composed of international experts in data mining fields. A total number of 118 papers were accepted for the conference. Amongst them, 63 papers were selected as regular papers and 55 papers were selected as short papers.

Based on the true story of the murder of a U.S. navy seaman in Elizabeth City, North Carolina on New Year's Day, 1943.

Today, there is a great deal of attention focused on sustainable growth worldwide. The increase in efficiency in the use of energy may even, in this historical moment, bring greater benefit than the use of renewable energies. Electricity appears to be the most sustainable of energies and the most promising hope for a planet capable of growing without compromising its own health and that of its inhabitants. Power electronics and electrical drives are the key technologies that will allow energy savings through the reduction of energy losses in many applications. This Special Issue has collected several scientific contributions related to energy efficiency in electrical equipment. Some articles are dedicated to the use and optimization of permanent magnet motors, which allow obtaining the highest level of efficiency. Most of the contributions describe the energy improvements that can be achieved with power electronics and the use of suitable control techniques. Last but not least, some articles describe interesting solutions for hybrid vehicles, which were created mainly to save energy in the smartest way possible.

This book details timing analysis and optimization techniques for circuits with level-sensitive memory elements. It contains a linear programming formulation applicable to the timing analysis of large scale circuits and includes a delay insertion methodology that improves the efficiency of clock skew scheduling. Coverage also provides a framework for and results from implementing timing optimization algorithms in a parallel computing environment.

Laurence Clark, the sole survivor of the Moribund Virus, doesn't look ninety-seven years old; in fact, he looks just as he did when he was cryogenically frozen over half a century ago. At that time, the U.S. was trying to recover from a depression, Hitler was rising to power, and the government took radical measures to create a new kind of viral weapon, using the residents of Estosolo, Arizona, as test subjects for secret medical experimentation. While everyone else was killed by these tests, Laurence's reaction was different: what didn't kill him made him stronger...much stronger. In him, The Final Cure was perfected, enhancing his senses and abilities, preventing aging, and leaving him nearly invincible. However, things go from bad to worse in the underground research facility, and Laurence must be placed in deep cryogenic sleep. When he awakens, he finds that the world isn't the only thing that has changed. As time goes on, Laurence discovers the people who revived him are not who they say they are, and he is forced to make decisions that could jeopardize the secrecy of the weapon he carries inside his body. Will he be able to uncover the truth before it's too late and stop those

who would use The Final Cure for evil from accomplishing their deadly goal?

The shattering sound of the machine gun seemed to tear into Mohamed's heart. Tears watered his eyes, and he covered his mouth as if to control his urge to vomit. He bowed his head and walked away. He vowed that he would never again play a part in such a ridiculous charade. Mohamed Jama Adam was able to overcome the desolate poverty of his childhood, but will he be able to overcome the oppression of corrupt government leaders? As a lawyer specializing in corporate law, Mohamed became suspicious when he was assigned to an ambiguous government case. He became even more suspicious when he discovered that he had no time to prepare, no time to gather witnesses, and no time to consult with his clients—six former government officials charged with treason against a brutal dictator. With a great desire to improve conditions in the leadership of his country, Mohamed began publishing an anonymous newsletter, fittingly titled *Nuovo Orizzonte*, or *New Horizon*. Just as each new day dawns beyond the eastern horizon, Mohamed dreamed of a new beginning for his homeland. For this dream, he was rewarded by being incarcerated in the top secret, maximum security prison in Lanta Bur. By an absolute miracle, after several years of incarceration, Mohamed manages to escape. It is then that he is confronted with a deteriorated homeland and must decide whether or not he has the courage to fight for his country, his love. Based on actual events, *Resurrection at Lanta Bur* is a powerful story of love and faith, of hate and betrayal.

Presents a novel approach to the statistical design of experiments, offering a simple way to specify and evaluate all possible designs without restrictions to classes of named designs. The work also presents a scientific design method from the recognition stage to implementation and summarization.

This book constitutes the thoroughly refereed post-conference proceedings of the Second International Joint Conference in Signal Processing and Information Technology, SPIT 2012, held in Dubai, UAE, in September 2012. The 32 papers included in this volume were carefully reviewed and selected from 330 submissions. The papers cover research and development activities in computer science, information technology, computational engineering, image and signal processing, and communication.

Dr. Bicksford is a well-known inventor whose current project deals with DNA manipulation in plants. He is reputed to be the wealthiest person in the world. And no one has ever seen him. So imagine their surprise when college students Rachel, Zachary, Chris, Liz, and Sam are hired to do top-secret research for the invisible man. The students are flown to his private estate and immediately given their assignments—Liz and Sam excavating an ancient Egyptian temple, Zachary cataloguing greenhouse contents, and Rachel and Chris analyzing the mysterious bloodweed plant. Upon the students' much-anticipated first meeting with Dr. Bicksford, Rachel is taken aback by his resemblance to the man she has been seeing in her dreams. But there's just one thing: the man in her dreams isn't a man at all, but an alien-like creature with paper-thin skin and razor-sharp fingernails. After several more dreams of and meetings with the mysterious man, Rachel comes to know, understand, and love the misunderstood creature that is Dr. Bicksford. Things quickly become even stranger when Zachary suddenly comes up missing, and it looks suspiciously as though he has purposely gone into hiding. Rachel is completely unprepared for the truth about Dr. Bicksford's past and the reason for her presence at his home, but in order to stay alive and remain with the one she loves, she must face the truth about her beloved Dr. Bicksford.

If you found a rusty old lamp on the beach, and upon touching it a genie appeared and granted you three wishes, what would you wish for? If you were wishing for a successful application

development effort, most likely you would wish for accurate and robust data models, comprehensive data flow diagrams, and an acute understanding of human behavior. The wish for well-designed conceptual and logical data models means the requirements are well-understood and that the design has been built with flexibility and extensibility leading to high application agility and low maintenance costs. The wish for detailed data flow diagrams means a concrete understanding of the business' value chain exists and is documented. The wish to understand how we think means excellent team dynamics while analyzing, designing, and building the application. Why search the beaches for genie lamps when instead you can read this book? Learn the skills required for modeling, value chain analysis, and team dynamics by following the journey the author and son go through in establishing a profitable summer lemonade business. This business grew from season to season proportionately with his adoption of important engineering principles. All of the concepts and principles are explained in a novel format, so you will learn the important messages while enjoying the story that unfolds within these pages. The story is about an old man who has spent his life designing data models and databases and his newly adopted son. Father and son have a 54 year age difference that produces a large generation gap. The father attempts to narrow the generation gap by having his nine-year-old son earn his entertainment money. The son must run a summer business that turns a lemon grove into profits so he can buy new computers and games. As the son struggles for profits, it becomes increasingly clear that dad's career in information technology can provide critical leverage in achieving success in business. The failures and successes of the son's business over the summers are a microcosm of the ups and downs of many enterprises as they struggle to manage information technology. Drawing on their experiences in successfully executing hundreds of MEMS development projects, the authors present the first practical guide to navigating the technical and business challenges of MEMS product development, from the initial concept stage all the way to commercialization. The strategies and tactics presented, when practiced diligently, can shorten development timelines, help avoid common pitfalls, and improve the odds of success, especially when resources are limited. MEMS Product Development illuminates what it really takes to develop a novel MEMS product so that innovators, designers, entrepreneurs, product managers, investors, and executives may properly prepare their companies to succeed. Lauren Johnson tries to cope with office life as she struggles working for a variety of ineffective, self-serving, and insensitive bosses.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Satisfied with her upscale lifestyle in Seattle, Jenna Niasmith is making great strides in her position as head interior designer at Smith and Williams. She has been a longtime favorite of the boss and returned to the company after a five-year marriage that turned sour. But her hopes for the corner office are dashed when the boss's son, Dirk Williams, returns from a failed stint at college to take her place running the office. Suddenly the position she worked so hard to achieve is crumbling beneath her. Upset with Dirk's manipulation of the office women, Jenna plots to thwart him at his own game. In the midst of Jenna's work struggles, she meets a mysterious stranger, who shares stories from his travels as an elemental. The Storm King

enchants Jenna with his luminescent tales, and she embraces the new friends that enter her life. Peggy Shaw's heartfelt novel will mesmerize you with the woven tales of Jenna and The Storm King.
