In *The Role of Zion/Jerusalem in Isaiah 40–55* Reinoud Oosting offers a linguistic and literary analysis of the Biblical Hebrew text of Isaiah 40-55, focusing on the depiction of Zion/Jerusalem in these chapters.

This textbook is a comprehensive guide for students interested in using participatory research to improve people's health and well-being. It is especially designed for those working in the fields of health and social welfare who are embarking on participatory research for the first time. It covers all phases in participatory research from "getting started," to "acting for change," "continuing the journey" and "articulating impact." Its unique format helps readers understand the essence of participatory research as a comprehensive approach for doing research which is underpinned by a set of fundamental values. The many real life examples of participatory research projects from around the world inspire readers to find creative ways to manage their own research while opening up new horizons in their work.

This work brings together for the first time a listing of all available reports relating to biological experiments conducted during balloon and rocket flights, with plants, animals, and humans as subjects. This compilation includes a listing of pertinent bibliographies, monographs, technical publications, and periodical articles.

Detailed tabulations are given of all known balloon and rocket flights, including such information as flight designation, location, type of experiment, experimental subjects, height, duration, success or failure, investigators, and cross-references to literature. A selective subject index is included, listing experimental material and giving cross-references to literature. Most of the citations are annotated.

Maintaining a question-and-answer format, this second edition provides simplified means of solving nearly 200 practical problems that confront engineers involved in the planning, design, operation and maintenance of steam plant systems.

Calculations pertaining to emissions, boiler efficiency, circulation and heat transfer equipment design and performance are provided. Solutions to 70 new problems are featured in this edition.

Fertility, Family Planning, and Women's Health New Data from the 1995 National Survey of Family Growth
DIANE Publishing

This edited volume with selected expanded papers from CELDA (Cognition and Exploratory Learning in the Digital Age) 2009 (<http://www.celda-conf.org/>) addresses the main issues concerned with problem solving, evolving learning processes, innovative pedagogies, and technology-based educational applications in the digital age. There have been advances in both cognitive psychology and computing that have affected the educational arena. The convergence of these two disciplines is increasing at a fast pace and affecting academia and professional practice in many ways. Paradigms such as just-in-time learning, constructivism, student-centered learning and collaborative approaches have emerged and are being supported by technological advancements such as simulations, virtual reality and multi-agents systems. These developments have created both opportunities and areas of serious concerns.

This volume aims to cover both technological as well as pedagogical issues related to these developments.

Abraham Kuyper is known as the energetic Dutch Protestant social activist and public theologian of the 1898 Princeton Stone Lectures, the Lectures on Calvinism. In fact, the church was the point from which Kuyper's concerns for society and public theology radiated. In his own words, "The problem of the church is none other than the problem of Christianity itself." The loss of state support for the church, religious pluralism, rising nationalism, and the populist religious revivals sweeping Europe in the nineteenth century all eroded the church's traditional supports. Dutch Protestantism faced the unprecedented prospect of "going Dutch"; from now on it would have to pay its own way. John Wood examines how Abraham Kuyper adapted the Dutch church to its modern social context through a new account of the nature of the church and its social position. The central concern of Kuyper's ecclesiology was to re-conceive the relationship between the inner aspects of the church—the faith and commitment of the members—and the external forms of the church, such as doctrinal confessions, sacraments, and the relationship of the church to the Dutch people and state. Kuyper's solution was to make the church less dependent on public entities such as nation and state and more dependent on private support, especially the good will of its members. This ecclesiology delegitimated the national church and helped Kuyper justify his break with the church, but it had wider effects as well. It precipitated a change in his theology of baptism from a view of the instrumental efficacy of the sacrament to his later doctrine of presumptive regeneration wherein the external sacrament followed, rather than preceded and prepared for, the internal work grace. This new ecclesiology also gave rise to his well-known public theology; once he achieved the private church he wanted, as the Netherlands' foremost public figure, he had to figure out how to make Christianity public again.

Whatever reproductive choices women make--whether they opt to end a pregnancy through abortion or continue to term and give birth--they are considered to be at risk of suffering serious mental health problems. According to opponents of abortion in the United States, potential injury to women is a major reason why people should consider abortion a problem. On the other hand, becoming a mother can also be considered a big risk. This fine, well-balanced book is about how people represent the results of reproductive choices. It examines how and why pregnancy and its various outcomes have come to be discussed this way. The author's interest in the medicalization of reproduction--its representation as a mental health problem--first arose in relation to abortion. There is a very clear contrast between the construction of women who have abortions, implied by moralized argument against abortion, and the construction that results when the case against abortion focuses on its effects on women's mental health. Lee argues that claims that connect abortion with mental illness have been limited in their influence, but this is not to suggest that they have not become a focus for discussion and have had no impact. The limits to such claims about abortion do not, by any means, suggest limits to the process of the medicalization of pregnancy more broadly, that is, a process of demedicalization. The final theme of Ellie Lee's book is the selective medicalization of reproduction. Centering on the claim that abortion can create a post abortion syndrome, the author examines the "medicalization" of the abortion problem on both sides of the Atlantic. Lee points to contrasts in legal and medical dimensions of the abortion issue that make for some important differences, but argues that in both the United States and Great Britain, the post-abortion-syndrome claim constitutes an example of the limits to medicalization and the return to the theme of motherhood as a psychological ordeal. Lee makes the case for looking to the social dimensions of mental health problems to account for and understand debates about what makes women ill. Ellie Lee is research fellow in the Department of Sociology and Social Policy, University of Southampton, Highfield, United Kingdom. Presents data on a wide range of topics based on personal interviews with a national

sample of women 15-44 years of age in the U.S. It is organized around the central theme of pregnancy & its determinants & consequences. Contents: children ever born & total births expected; wanted & unwanted births; sexual intercourse; marriage & cohabitation; contraceptive use; fecundity, infertility, & sterilization operations; breastfeeding, maternity leave, & child care; adoption, stepchildren, & foster children; health insurance coverage; family planning & other medical services; cigarette smoking; HIV testing; pelvic inflammatory disease; & sex educ.

A groundbreaking collection of writings on the growing phenomenon of single-parent families in the United States, and how it impacts society as a whole. * 30 expert contributors—all highly accomplished experts—address a variety of issues related to the growing number of single-parent families in the United States * Bibliographic listings of references and additional readings conclude each chapter * Offers a complete index
Of NIH report on condom effectiveness -- The declines in adolescent pregnancy, birth and abortion rates in the 1990s: what factors are responsible? -- The effectiveness of abstinence education programs in reducing sexual activity among youth.

The Journal of Student Affairs in Africa (JSAA) is an independent, peer-reviewed, multi-disciplinary, open-access academic journal that publishes scholarly research and reflective discussions about the theory and practice of student affairs in Africa. The JSAA strives to be the foremost academic journal dealing with the theory and practice of the student affairs domain in universities on the African continent, and an indispensable resource for national policy makers, the executive leadership of universities and colleges dealing with student affairs, deans of students and other senior student affairs professionals, as well as institutional researchers and academics and students focused on the field of higher education studies and student affairs.

"Research in the Social Scientific Study of Religion" publishes empirical and theoretical studies of religion from a wide range of disciplines and from all parts of the globe. This volume has a special section on Islam and Mental Health, an important and neglected area of study. The section draws on work, from six countries, that have applied different theoretical frameworks and empirical methods to examine the link between religion, psychology, and health in very diverse Muslim communities. Other articles examine topics as diverse as spirituality, psychological health, conversion, and the cultural psychology of religion. Disciplines represented include those that draw on qualitative, quantitative, and theoretical methods of study which together represent an important contribution to the contemporary study of religion.

This work is a critical reflection on the state of health promotion effectiveness in practice around the world. It examines the meaning of health promotion from regional perspectives, and explores regional strengths and weaknesses in demonstrating effectiveness. The book goes on to consider issues in public health such as tobacco, mental health, obesity, urbanization, war, and social determinants in order to assess the role of effectiveness, and to examine methodologies for demonstrating effectiveness. Finally, the book looks at questions over the effectiveness of health promotion – the debate about the relationship between evidence, impact, and outcomes.

Statistics collected in 1995 are presented on fertility and family size, wanted and unwanted births, marriage, cohabitation, sexual intercourse, sexual partners, contraceptive use, adoption, breast-feeding, maternity leave, use of family planning and

other medical services, and health conditions and behavior. The data was collected between January and October of 1995.

This volume presents both sides of the debate over whether same-sex marriage should be legalized.
