Within the field of abnormal psychology, research developments continue to sharpen the understanding of abnormal behavior. In Abnormal Psychology in a Changing World, Nevid, Rathus, and Greene endeavor to bring these advances to students in a way that both stimulates interest and makes complex material understandable. More importantly, however, they recognize there is a basic human dimension to the study of abnormal psychology. The approach the authors take is to help students enter the world of people suffering from the range of disorders they encounter in the text. By including many illustrative case examples drawn from the authors' own case experiences and those of other practitioners, an accompanying video casebook of interviews with real people diagnosed with different disorders, and a landmark pedagogical feature of first-person narratives from people struggling with psychological disorders, Abnormal Psychology in a Changing World 7e helps put a human face on the study of abnormal psychology. This text helps students enter the world of people suffering from psychological disorders through illustrative case examples, a video casebook with real world interviews, and fully integrated, original, and interactive pedagogy.

Real Science. Real Life. Presents a balanced Scientist - Practitioner - Educator approach to understanding Abnormal Psychology. Several features distinguish this text from other textbooks currently available. First, the base of abnormal psychology rests on knowledge generated through scientific studies and clinical practice. This text emphasizes this rich blend throughout. Second, it is increasingly clear that most forms of adult abnormal behavior either begin in childhood or have childhood precursors. This text highlights what is known about the developmental trajectory of each condition. Such a focus is instrumental in helping students gain some insight into the etiology of maladaptive conditions. Third, Beidel integrates biological findings with findings from social and behavioral sciences to foster the perspective that abnormal behavior is complex and subject to many different forces, and highlight how these variables often interact in a reciprocal fashion. Fourth, scientific findings with respect to race and gender are discussed with respect to each condition. This includes a discussion of prevalence, differences in symptom manifestation, and any known etiological differences. Importantly, an effort is made to "bring to life" the nature of these conditions by providing vivid clinical descriptions. In addition to short descriptions used liberally throughout each chapter, a fully integrated case study is presented at the end of each chapter, again illustrating the interplay of biological, psychosocial and emotional factors. MyPsychLab contains study tools such as flashcards, self tests, videos, as well as Speaking Out: DSM in Context which ties real patient interview videos to specific content from the DSM-IV, helping students understand how the DSM-IV criteria applies to real people experiencing disorders. MyPsychLab is available at [www.mypsychlab.com](http://www.mypsychlab.com).
