

Abnormal Psychology Dsm 5 Update Ronald Comer

Real Science. Real Life. Now with DSM5 coverage throughout. This leading-edge author team, consisting of three active researchers, clinicians, and educators, take a scientist-practitioner approach emphasizing the rich blend of both the science and practice of abnormal psychology throughout the text. The developmental trajectory of each condition is discussed where appropriate and scientific findings with respect to race and gender are incorporated into discussions about each condition. Biological findings are integrated with findings from social and behavioral sciences, highlighting the complexity of abnormal behavior and how it is often influenced by a wide range of variables. The authors encourage students to look at psychological disorders along a continuum and analyze disorders in terms of whether the individual's behavior creates distress or impairs daily functioning. Importantly, an effort is made to "bring to life" the nature of these conditions by providing vivid clinical descriptions. In addition to short descriptions used liberally throughout each chapter, a fully integrated case study is presented at the end of each chapter, again illustrating the interplay of biological, psychosocial and emotional factors. The 3rd edition includes coverage of the Diagnostic and Statistical Manual (DSM-5), with updated text references and examples throughout. MyPsychLab is an integral part of the Beidel / Bulik / Stanley program. Key learning applications include MyPsychLab video series with new virtual case studies. "Most textbooks on abnormal psychology include short descriptions of actual clinical cases. However, those presentations are necessarily brief and too fragmented for students to gain a clear understanding of the unique complexities of a person's troubled life. Case Studies in Abnormal Psychology, Ninth Edition takes mental disorders from the realm of theory into the complex reality of human lives. This casebook presents comprehensive coverage of 23 high interest cases that include topics such as eating disorders, gender identity disorder, borderline personality, and posttraumatic stress disorder. Each study (1) provides detailed descriptions of a range of clinical problems, (2) illustrates some of the ways in which these problems can be viewed and treated, and (3) discusses some of the evidence that is available concerning the prevalence and causes of the disorders in question"--
