With this fourth edition, accountants will acquire a practical set of tools and the confidence they need to use them effectively in making business decisions. It better reflects a more conceptual and decision-making approach to the material. The authors follow a "macro- to micro-" strategy by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle. The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. This motivates accountants by grounding the discussion in the real world, showing them the relevance of the topics covered to their careers.

Finance and banking sector has had to adopt a new customer-oriented approach and go beyond traditional practices in the face of rapid changes in technology and increasing competition.

Technological development, which is the pioneer of change, brings the financial system to a new level as in every field of economy. Written in these directions, this book includes current debates in the field of banking and finance. Especially the rapid entry of blockchain technology into all areas of life has caused serious changes in corporate governance mechanisms. In this context, the content of the book answers the question of why corporate governance matters a problem for the banking sector with theoretical aspects. And at the same time, it empirically discusses measures of the potential market value effects of the blockchain systems integration into corporate governance procedures. Along with these, the banking sector, which constitutes an important part of the financial system,

has become more significant after the global mortgage crisis. The evaluation of the banking sector, which is structurally different from other sectors, requires a separate approach. The content of the book draws an overall picture that can be used for banks in terms of valuation methods. Additionally, the determinants of the financial performance of banks, which are the main components of the financial system, are analysed specifically in the Turkish banking sector. On the other hand, financial problems such as portfolio optimization, which is one of the important topics of financial decisions, and its applications are examined specifically for the Turkish stock market. Approaches and new methods of optimization are tested.
