Today's business leaders operate in an increasingly harsh environment. Uncertainty in the economy causes paralysis. Quarterly goals drive short-term and shortsighted decisions. Workforce mobility kills loyalty. Iconic products decline as fast as start-ups create new categories. And the pressure to do more with less, combined with the multiplicity of available marketing tools and technology, can be overwhelming. Now more than ever, brands and the people who lead them need clarity and guidance. The good news is that people have found ways to thrive in harsh environments for millennia. Author Jonathan David Lewis, combining the lessons of group survival dynamics with more than a decade of proprietary research into the factors that cause companies to lose their way, shows leaders how to thrive in unforgiving business environments by learning to: Focus on navigating risk instead of trying to measure or reduce it. Cultivate your brand's will to live by staying positive and asking the most important question: Are you worth it? Read the brand signs by observing the market, keeping an eye on performance measures, engaging your team, and listening to your gut. Develop a concept of "mission" to ensure internal alignment and reduce friction. Act with urgency rather than waiting for the right circumstance. Brand vs. Wild helps readers understand the wilderness in which they find their companies and identify the specific steps they must take to thrive in the Brand Wilderness. There is hope in a harsh business world. And Brand vs. Wild is it.

The LEGO® Technic Idea Book: Simple Machines is a collection of hundreds of working examples of simple yet fascinating Technic models that you can build based on their pictures alone. Each project uses color-coded pieces and is photographed from multiple angles, making it easy to see how the models are assembled without the need for step-by-step instructions. Every model illustrates a different principle, concept, or mechanism that will inspire your own original creations. You're encouraged to use these elements as building blocks to create your own masterpieces. The Technic models in Simple Machines demonstrate basic configurations of gears, shafts, pulleys, turntables, connectors, and the like. You'll learn how to create small, elegant machines like cranes, operable doors, motorized cars, a rubber band-powered rocket launcher, a hand-cranked drag racer, and even musical instruments. This visual guide, the first in the three-volume LEGO Technic Idea Book series, is the brainchild of master builder Yoshihito Isogawa of Tokyo, Japan. Each title is filled with photos of Isogawa's unique models, all of which are designed to fire the imaginations of LEGO builders young and old. Imagine. Create. Invent. Now, what will you build? NOTE: The LEGO Technic Idea Book series uses parts from various Technic sets. If you don't have some of the pieces shown in a particular model, experiment by substituting your own parts or visit the author's website for a list of the special parts used in the book.

For the 50th anniversary of the Boeing 747's first commercial flight, a picture book about the development of the iconic passenger plane and how it changed the history of air travel. In 1968, the biggest passenger jet the world had ever seen premiered in Everett, Washington. The giant plane was called the Boeing 747, but reporters named it "the Jumbo jet." There was only one problem. It couldn't fly. Yet. Jumbo details the story of the world's first wide body passenger jet, which could hold more people than any other plane at the time and played a pivotal role in allowing middle class families to afford overseas travel. Author and illustrator Chris Gall, himself a licensed pilot, shows how an innovative design, hard work by countless people, and ground-breaking engineering put the Jumbo jet in the air. On January 22, 1970, the Boeing 747 made it's first transatlantic flight, taking passengers from New York to Paris in seven hours.

What if all those seemingly insignificant little what a coincidence! moments you've experienced were actually hinting at something very personal and important about yourself, and about the workings of human consciousness as a whole? Would you listen? Sue Watkins does. For more than thirty-five years, Susan M. Watkins, a former small-town newspaper reporter and the author of five books, has logged coincidences as they've occurred in her life. What she's discovered is that single, seemingly inconsequential coincidences—an old friend calling at the exact moment she pops into your head, for example—are often pieces of larger, more complex and meaningful coincidence clusters that together create rich and revealing stories. In What a Coincidence! Watkins presents coincidence clusters that are truly astounding and, along the way, explores those two important questions: What do our personal coincidence clusters reveal to us about ourselves and our lives? And what do they reveal about human consciousness at large? The conclusions she draws are utterly life altering. You will never brush off those what a coincidence! moments again.

With the increasing frequency of natural and human-induced disasters and the increasing magnitude of their consequences, a clear need exists for governments and communities to become more resilient. The National Research Council's 2012 report Disaster Resilience: A National Imperative addressed the importance of resilience, discussed different challenges and approaches for building resilience, and outlined steps for implementing resilience efforts in communities and within government. Launching a National Conversation on Disaster Resilience in America is a summary of a one-day event in November 2012 to formally launch a national conversation on resilience. Nationally-recognized experts in disaster resilience met to discuss developing a culture of resilience, implementing resilience, and understanding federal perspectives about resilience. This report includes a broad range of perspectives and experiences derived from many types of hazards and disasters in all parts of the country.

At first, everything appeared normal, except for the absence of people. Then I saw enemy bunkers and firing positions hidden among the trees. I reported my sightings to Maj. Thompson in the C & C ship. Then I saw several individuals running through the undergrowth toward the bunkers. They were dressed in black VC pajamas and carrying weapons. I quickly flew away from the village. The Cobra gunships rolled in firing rockets and mini guns at the bunkers. When they finished their gun run, we came back in to do a damage report. As I came around the edge of the village at tree-top level and slow speed, all hell broke loose. I received heavy automatic weapons fire as rounds penetrated my Loach. I radioed, "Taking fire, taking fire."
