Though American Motors never approached the size of Detroit's Big Three, it produced a long series of successful cars that were distinctive, often innovative and in many cases influential. This history examines AMC's cars from the company's formation in 1954 through its absorption by Chrysler in 1987. The Gremlin, Pacer and Eagle vehicles are examined in detail, as are the AMC custom cars of George Barris and Carl Green. The text details AMC's 1980s involvement with the French firm Renault and the design legacy of that joint venture, which includes the Hummer. The evolution of Jeep is covered from the 1960s through the 2000s. Features include some 225 photographs; a listing of AMC / Rambler clubs, organizations and business entities, with contact details; tables of detailed specifications and performance data; data on technical devices, trim packages and all model variations; a comprehensive account of AMC / Rambler appearances in film, television and cartoons.

Self-driving cars mark the next great shift in mass transportation. Learn about early attempts at self-driving technology, the benefits of driverless cars, controversies surrounding the new technology, innovations that make self-driving cars possible, and the industry's major players. This emerging "disruptive" technology has its roots in the work of engineers and futurists dating back decades. Author Michael Fallon traces how the software and hardware for self-driving vehicles developed through the years, including major milestones, notable misfires, and efforts from the public and private sectors. He also spotlights recent breakthroughs that have made self-driving vehicles viable on a mass scale, along with the public debate that these breakthroughs have created.
