Welcome to the new gold standard in critical care transport training. Published in conjunction with the American Academy of Orthopaedic Surgeons (AAOS) and the American College of Emergency Physicians (ACEP), Critical Care Transport offers cutting edge content relevant to any healthcare provider training in critical care transport. Like no other textbook in this market, Critical Care Transport thoroughly prepares medical professionals to function as competent members of a critical care team by covering the material that everyone—paramedics, nurses, physicians, and specialty crew—needs to know to operate effectively in the prehospital critical care environment. This book meets the curricula of major critical care training programs, including University of Maryland, Baltimore County (UMBC). It covers both ground and flight transport, and meets the objectives of critical care transport certification exams such as the Certified Flight Paramedic (FP-C) exam administered by the Board for Critical Care Transport Paramedic Certification. Content includes information specific to prehospital critical care transport, such as flight physiology, lab analysis, hemodynamic monitoring, and specialized devices such as the intra-aortic balloon pump. Standard topics such as airway management, trauma, and pharmacology are covered in the context of critical care. Chapters have been authored by leading critical care professionals across the country and represent the most current, state-of-the-art information on management of critical care patients.

In *IN THE DARK*, an insider exposes the "darkness" in healthcare citing examples of when those in healthcare may act in ways that benefit themselves at the expense of the patient and the public. The author gives a perspective and information that many are unaware of and may be shocked if they knew. The author brings to light the harm that private equity may be causing in healthcare, and the contract management groups (CMGs), or staffing companies owned by private equity, that place physicians in uncomfortable situations where patients could be in danger and harmed. *IN THE DARK* exposes how staffing companies (CMGs) take advantage of physicians and other health practitioners working for them, sometimes taking "loan shark fees" from the revenue they generate. The staffing companies (CMGs) influence the practice environment in which their physicians and non-physicians practice medicine that affects patient care and safety. These same staffing companies, often owned by private equity firms, use less trained and non-specialists but charge you the same as if a specialist sees you. Contract management groups keep patients in the dark preventing them to make an "informed" choice. The author exposes how insurance companies sell expensive policies to the public that are sometimes worse than no insurance at all. Insurers who refuse to cover procedures or expenses even though you pay your premiums. It discusses how many in America are in debt or file for bankruptcy because of healthcare costs and they have no insurance or have insurance that does not cover their medical expenses. He discusses the harm caused by plaintiff attorneys and frivolous lawsuits to patients and communities in addition to the hundreds of billions of dollars it adds to the cost of healthcare. *IN THE DARK* exposes hospitals that may try to influence the way physicians treat patients i.e. discourage admitting sick patients to their hospital if they do not have insurance or only have Medicaid insurance. Some hospitals allow staffing with less trained physicians in order to save money. How hospital administrators may "look the other way" for the sake of their hospital's bottom line. This eye opening book will make you stop and think. Hopefully it will also:

- 1) Help you know what questions to ask when seeking care, shopping for insurance or pricing medication?
- 2) Make you aware of the differences that exist in healthcare.
- 3) Help you be able to compare doctors and hospitals?
- 4) Help you shop and find the best doctor and hospital for you.
- 4) Help you obtain better healthcare for you and your family.
- 5) Help you get better prices for medications or procedures that you need.
- 6) Allow you to live a healthier life.

The author not only points out the problems with our current healthcare system but also offers common sense and innovative ideas to help improve it. He discusses Health-Life Insurance policies, the Direct Care Organization model, D-Meals and many others. He also discusses popular topics such as Telemedicine and Medicare for All. *IN THE DARK* is a great reference for any household to have to better understand the healthcare you have and be better equipped to make better informed decisions. A great read in plain language that is easy to understand and hard to put down.

The Complete Fire Inspector I and II Training Solution! Fire inspectors need to know how to interpret and apply national

and local codes and standards in the office and in the field. Fire Inspector: Principles and Practice is designed to prepare fire inspectors to ensure the highest standards of fire and life safety in their communities. The National Fire Protection Association (NFPA) and the International Association of Fire Chiefs (IAFC) are pleased to bring you Fire Inspector: Principles and Practice, a modern integrated teaching and learning system for the fire inspector. This textbook meets and exceeds the job performance requirements for level I and II fire inspectors from Chapters 4 and 5 of NFPA 1031, Standard for Professional Qualifications for Fire Inspector and Plan Examiner, 2009 Edition. Fire Inspector: Principles and Practice is built on a solid foundation of the basics: building construction, fire growth, and types of occupancies. This fundamental knowledge is presented in a concise, understandable writing style that is easy to digest and recall. The solid foundation of fire and building knowledge then branches out to show the fire inspector how abstract concepts and codes will be concretely applied on a daily basis. This is the text that truly prepares fire inspectors for the real world. From the American College of Emergency Physicians and the ACEP Bookstore (www.acep.org/bookstore). For physicians and all other health care providers who care for critically ill patients in emergency departments. Covers all aspects of resuscitation and management. Every chapter highlights critical points and pearls, along with management algorithms for quick reference. Chapters cover undifferentiated shock, fluid management, post-cardiac arrest management, septic shock, ultrasonography, critically ill neonates, transfusions, cardiogenic shock, pulmonary embolism, and much more.

"A wonderful picture of an important period in the practice of medicine in the United States." (from the Foreword by Peter Rosen, MD) Here is the very first book to comprehensively explore the evolution of the field of emergency medicine -- from its origins following World War II, through the sociopolitical changes of the 1950s, 1960s, and 1970s, to the present. First-hand narratives from more than 45 founders and pioneers of emergency medicine provide a vivid portrayal of the important events and viewpoints that have given rise to today's practice. Represents the first comprehensive history of emergency medicine as a specialty. Provides first-hand oral histories from more than 45 of the key figures who witnessed and helped to shape the developments chronicled in the book. Offers keen insights into how the sociopolitical changes of the 1950s through 1970s influenced public health, health care delivery, and emergency medicine. Includes many unique photographs of important leaders in emergency medicine.
