As healthcare becomes more complex, the integration of all members of the team becomes even more important. Part of this integration requires that all team members have a grasp of the fundamentals of the medical and surgical treatments they are involved in. Written specifically for paramedical professionals who support doctors and nurses, Clinical Procedures for Medical Technology Specialists presents a clear and concise description of the more common diagnostic and treatment procedures used in current medical care. While a great many texts describe medical and surgical procedures, there are few, if any, aimed at the large, diverse group of professionals who directly support the medical system. Moreover, these sources tend to have more detail than is required for a paramedical professional. Carefully organized in an encyclopedic format that allows easy access to just the right amount of information, this book supplies nonclinical members of the modern integrated healthcare team with a more complete perspective of the clinical experiences of the clients of the system — the patients.

This third edition provides 2900 multiple choice questions on human anatomy and physiology, and some biophysical science, separated into 20 chapters and 68 categories. In addition, there are 64 essay topics. The answer to each question is accompanied by an explanation. Each chapter has an introduction to set the scene for the questions to come. However, not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The textbook offers a more holistic approach to the subjects of anatomy and physiology by also including biomechanics, biophysics and biochemistry. The questions have been used in end-of-semester examinations for undergraduate anatomy and physiology courses, and as such, reflect the focus of these particular courses and are pitched at this level to challenge students that are beginning their training in anatomy and physiology. The question and answer combinations are intended for use by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition and dietetics, health sciences, exercise science, and students taking an anatomy and physiology course as an elective.
