source for anyone treating female patients, this source considers age and ethnicity factors and analyzes a wide range of symptoms, skin conditions, and diseases that physicians may encounter when caring for female patients.

This is a reproduction of the original artefact. Generally these books are created from careful scans of the original. This allows us to preserve the book accurately and present it in the way the author intended. Since the original versions are generally quite old, there may occasionally be certain imperfections within these reproductions. We're happy to make these classics available again for future generations to enjoy!

Excerpt from The Anatomy, Physiology and Pathology of the Eye The organization of the eye, and its beautiful adaptation to the wants and necessities of every living thing, has always been a subject sufficiently attractive to secure attention and respect from the most thoughtless and indifferent; from those even, who in other respects, are disposed to forget the wonderful nature of their creation, the fearful construction of every organ and sense with which they are endowed. Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

Since RUTHERFORD MORISON left us with the concept of the Omentum being the 'abdominal policeman', clinicians have tacitly assumed that they know sufficient about the structure and function of this organ. However interest in the omentum and its relationship to clinical surgery has recently been developing. This book examines all aspects with special reference to surgery and should provide a welcome impetus in research and clinical practice. The editors and contributors have produced a book which is comprehensive and well illustrated and contains detailed references to the important original sources - so essential in a work of this nature. It is written for those who wish to share the delight of acquiring knowledge - even about a comparatively humble organ - as well as for practical surgeons. Both will find ample information to arouse their interest and expand their surgical horizons in exciting ways of which they will almost certainly not have dreamt. I welcome a book of this calibre on a subject which deserves our increasing interest. I delight in the fact that it is dedicated to my friend and colleague MARTIN ALLGOWER.

This text is focused on the anatomy and physiology needs of massage therapy students and practitioners. It gives extensive coverage of the major body systems - integumentary, skeletal, muscular, and nervous-crucial for massage therapy. It also provides an overview of other body systems so students have a well-rounded understanding of anatomy and physiology. This text is organised into three major sections. The first section focuses on the anatomy and physiology of each body system. Important topics in pathology such as pain, inflammation and healing are detailed in the second section. The third section provides case studies in relation to each body system, giving common scenarios that therapists may come across.

This newly updated and expanded colouring and workbook complements Ruth Hull's companion text, *Anatomy, Physiology and Pathology for Therapists and Healthcare Professionals* but can also be used in conjunction with any other anatomy and physiology textbook. This comprehensive book covers all the body systems and is the perfect study and revision aid for anyone studying a wide range of complementary therapies from aromatherapy, reflexology and massage to hair and beauty up to level 3. It can be used either in class or as a separate self-study resource, and contains: ?over 75 brand new illustrations for the student to colour;?a section in which students are encouraged to learn for themselves and revise their work. They are guided through creating mind-maps, spider diagrams, cue cards, mnemonics, and summaries that will help them understand and memorise their work;?a series of exercises that test the students' knowledge in different ways - colouring in and labelling diagrams, matching columns, filling in gaps, problem-solving exercises, cross words, word searches, true/false exercises, and un-jumbling words; ?vocabulary tests; ?multiple choice questions; ?mock exam papers - 14 exam papers containing multiple choice questions which cover the entire anatomy and physiology syllabus.
