Culture is a concept that has remained on the top of the agenda within the social sciences for two decades. It incites controversy and debate and always appears fresh. This book, updated throughout and with new sections on visual culture, urban culture and subcultures, argues that to understand the concept we need to locate it within traditions of thought and appreciate its political and ideological bases. The book looks at the concept of culture in the context of idealism and materialism, examining its relation to the notion of social structure and assessing its once assumed monopoly within literary study. Culture remains stimulating throughout. A standard reference text for students on sociology and cultural studies courses, this second concise and student-friendly edition offers an overview over the sociology of culture in an accessible format.

Lawyers and law students need to think lucidly and write clearly. Undergraduate “prelaw” students who aspire to become law students and someday lawyers can do the former by practicing the latter. If writing is like thinking, then studying writing is like studying thinking. This book is a study of legal writing and the law school admissions process, which provides candid advice on navigating the LSAC.org application process, the LSAT, and a style of writing called “FIRAAC.” The FIRAAC formula can help prelaw students learn to write (think) like a law student. FIRAAC can also help law students pass “race-horse” exams and bar

candidates pass the bar exam. If your goal is to go to law school, graduate, pass the bar exam, and become a lawyer who writes (thinks) lucidly and clearly, then this book is for you!

Presentation Patterns is the first book on presentations that categorizes and organizes the building blocks (or patterns) that you'll need to communicate effectively using presentation tools like Keynote and PowerPoint. Patterns are like the lower-level steps found inside recipes; they are the techniques you must master to be considered a master chef or master presenter. You can use the patterns in this book to construct your own recipes for different contexts, such as business meetings, technical demonstrations, scientific expositions, and keynotes, just to name a few. Although there are no such things as antirecipes, this book shows you lots of antipatterns—things you should avoid doing in presentations. Modern presentation tools often encourage ineffective presentation techniques, but this book shows you how to avoid them. Each pattern is introduced with a memorable name, a definition, and a brief explanation of motivation. Readers learn where the pattern applies, the consequences of applying it, and how to apply it. The authors also identify critical antipatterns: clichés, fallacies, and design mistakes that cause presentations to disappoint. These problems are easy to avoid—once you know how. Presentation Patterns will help you Plan what you'll say, who you'll say it to, how long you'll talk, and where you'll present Perfectly calibrate your presentation to your audience Use the storyteller's "narrative arc" to full advantage Strengthen your credibility—and avoid mistakes that hurt it Hone your message before you ever touch presentation software Incorporate visuals that support your message instead of hindering it Create highly effective "infodecks" that work when you're not able to deliver a talk in person Construct slides that really communicate and avoid "Ant Fonts," "Floodmarks," "Alienating Artifacts," and other errors Master 13 powerful techniques for delivering your presentation with power, authority, and clarity Whether you use this book as a handy reference or read it from start to finish, it will be a revelation: an entirely new language for systematically planning, creating, and delivering more powerful presentations. You'll quickly find it indispensable—no matter what you're presenting, who your audiences are, or what message you're driving home.

Geology coalesced as a discipline in the early part of the nineteenth century, with the coming together of many strands of investigation and thought. The theme of experimentation and/or instrument-aided observation is absent from most recent accounts of that time, which rely on an admixture of theory and field observations, informed by close examination of minerals. James Hutton emerged as the person who had it right with suggestion of a central heat source for Earth, while Abraham Gottlob Werner and his Neptunist supporters were derided as being blinded by overarching belief, as opposed to sober application of observed facts. However, despite several claims that Hutton had won the day, primary literature from both England and the Continent reveals that the question was by no means settled for decades after Hutton derided information derived from "looking into a little crucible." This Special Paper makes the case that it was just those parameters of heat, pressure, solution, and composition discovered in the laboratory that prevented resolution of the overriding questions about rock origin. Religion is commonly viewed through the lens of the world's religious traditions, stressing the differences, and often the conflicts, among

them. The author of this book instead presents religion as a common and universal human phenomenon, based deeply in a human nature shared by all. In this view, the underlining and unifying principle of religion is a particular affirmative attitude toward life, which he presents as the Ultimate Value, and as such the key cultural constituent and defining factor of all religion. This Ultimate Value finds its expressions in various civilizations, and results in a variety of forms; these are what we know as the world's religious traditions. By analyzing the roles of both culture and civilization in their attitudes toward life, the author places religion beyond religious traditions, and shows how the latter, regardless of whether they are theistic or atheistic, draw their principles from the former, mainly by promoting the Golden Rule in its applications.

The first systematic exploration of Deweyan pedagogy in an actual classroom since studies of Dewey's own Laboratory School at the turn of the century! In Part I, using accessible language, Stephen Fishman discusses Dewey's educational theory in the context of Dewey's ideology and process philosophy. In Part II, Fishman joins composition specialist Lucille McCarthy to examine his own Introduction to Philosophy class. In doing so, the authors model a collaborative form of practitioner inquiry and bring to life such complex Deweyan concepts as student-curriculum integration, interest and effort, and continuity and interaction.

Weakness of will seems to be an inherent part of the human condition. We know what we ought to do and how often we knowingly, willingly fall short in actual practice. How can this be explained and what challenges does it present to systematic explanations of intentional actions? In this clear, incisive and well written inquiry, philosopher Keith Wyma subjects the thought of three prominent intentional theorists, R.M.Hare, Donald Davidson and Thomas Aquinas, to the crucible of reason to see whether and how they can account for weakness of will. Wyma is careful to clarify which actions count as incontinent or the result of weakness of will; they must be performed intentionally even as they are judged as something that ought not to be done. His in-depth study of Hare, Davidson and Aquinas on this important issue is a major contribution to understanding practical rationality and intentional action.
