This book helps the Body of Christ come to a deeper understanding of warfare coupled with gaining greater appreciation for what is at the heart of the war. Readers gain valuable insight into this important facet of the faith journey Christians undertake. God's Chosen: Understanding Spiritual Warfare offers Christians the basis to learn and use the means God affords, namely His full armor equipped with His strength and mighty power. Believers prepare and fight triumphantly against evil and wicked forces by putting on His full armor. God equips them to fight offensively and defensively. Knowing Jesus fixed the fight in believers' favor help to confidently oppose the enemy and remain faithful to God. Through conscious engagement in this fight believers stand firmly winning against all odds. In 2005, during prayer, the Holy Spirit inspired me to write this book on spiritual warfare. I was going through a precarious time and as usual, I sought God in prayer and study of the Word. The Holy Spirit led me to Ephesians 6:10-18. As I studied and meditated, God moved me to begin writing on the subject of warfare. During research and study, I discovered there are not enough books recording this phase of the Christian's journey. Therefore, I saw the need to press through varied attacks to produce this work. In August 1978, one hundred or so scholars from several countries around the world met in Crete, Greece to discuss the progress made in designing information systems and the relation of information science to this activity. This was the Third Advanced Study Institute supported by the North Atlantic Treaty Organization, Brussels, Belgium. The first Institute was conducted in 1972 and held in Seven Springs, Pennsylvania. The results of this Institute were published by Marcel Dekker and titled Information Science: Search for Identity. The second Institute was held at the College of Librarianship, Aberystwyth, Wales in the summer of 1974. The proceedings were published by Noordhoff International Publishing, Leyden, The Netherlands, entitled Perspectives of Information Science edited by A. Debons and Hilliam Cameron. The three institutes that were conducted shared a common purpose, namely, to assess the state of affairs of information science and to share this assessment with international community. Information science can be said to have emerged during the past two, three decades in response to the significant increase in data-knowledge processing technology, the

growth of knowledge as the result of these trends and the increase in problem solving, decision making complexity that faced all institutions at all levels throughout the world. Information systems, for many reasons, remain as an abstraction. Nevertheless, considerable funds and human efforts are being expended on them. Thus, such systems are of vital concerns to both scientists and technologists who are involved in them.
