Case studies of individual language learners are a valuable means of illustrating issues connected with learning, using, and in some cases, losing another language. Yet, even though increasing numbers of graduate students and scholars conduct research using case studies or mix quantitative and qualitative methods, there are no dedicated applied linguistics research methods texts that guide one through the case study process. This book fills that gap. The volume provides an overview of case study methodology and examples of published case studies in applied linguistics, without attempting to be a comprehensive survey of the innumerable case studies that exist. The case studies presented here involve teachers and learners of English and various other languages in North America and other parts of the world. Advice is also given about how to conduct and publish case studies. *Case Study Research in Applied Linguistics* is designed for students, both undergraduate and graduate, as well as other scholars seeking to understand case study methods and their applications in research on language learners and language users in a variety of contexts. Applied linguists working in other subfields will find the volume useful in their own research and in their supervision and evaluation of others' case studies.

Comparative case studies are an effective qualitative tool for researching the impact of policy and practice in various fields of social research, including education. Developed in response to the inadequacy of traditional case study approaches, comparative case studies are highly effective because of their ability to synthesize information across time and space. In *Rethinking Case Study Research: A Comparative Approach*, the authors describe, explain, and illustrate the horizontal, vertical, and transversal axes of comparative case studies in order to help readers develop their own comparative case study research designs. In six concise chapters,

two experts employ geographically distinct case studies—from Tanzania to Guatemala to the U.S.—to show how this innovative approach applies to the operation of policy and practice across multiple social fields. With examples and activities from anthropology, development studies, and policy studies, this volume is written for researchers, especially graduate students, in the fields of education and the interpretive social sciences.

Once students have learned the principles behind basic pathology and the mechanisms of disease, they must then consolidate their knowledge by putting those principles into clinical practice. Providing a practical learning experience, this volume presents fifty structured clinical scenarios. Each case is based on a clinical situation that pulls together the key pathological, radiological, and clinical aspects of a condition. Questions and answers highlight diagnostic avenues and provide an effective way of testing assimilation of the material. Students can set their own level of challenge and build their clinical understanding by delving into a cluster of cases covering related topics, or instead emphasize one of the five main themes: symptoms, signs, investigations, treatment, and overall management. Ample illustrations supplement the text, which blends typical clinical case presentations with narrative-style and imaging-based cases.

Written by two leading academic and clinical experts in geriatric primary care, *Case Studies in Geriatric Primary Care and Multimorbidity Management*, 1st Edition uses detailed Exemplar Case Studies and Practice Case Studies to teach you how to think like an expert geriatric clinician. To provide extensive practice in learning how to think like an expert, case studies reflect the reality that care does not necessarily begin or end in the primary care setting. Cases therefore move fluidly from primary care to acute care to inpatient rehabilitation to assisted living to long-term care. As you work through both basic-level and advanced Practice Case Studies, you can make extensive notes in the printed book and then go online to submit answers for grading and receive expert feedback for self-reflection. NEW! Introductory unit on the core principles of caring for older adults gives you a strong foundation in the principles of geriatric primary care and multimorbidity management. NEW! and UNIQUE! Exceptionally detailed, unfolding Exemplar Case Studies demonstrate how an expert advanced practitioner "thinks clinically" to provide care to older adults with multiple conditions. NEW and UNIQUE! Case study research is not an easy option and this book points out where the challenges are and what needs to be done to become a competent case study researcher. Issues which are given particular attention include different types of case study, the issue of how many cases are required, research proposals and research protocols when using case studies, the collection and analysis of data. Case Study Research also addressed the analysis of case study data, the case study write up and how to evaluate a case study.

In higher education, case studies can be utilized to have students put themselves into problems faced by a protagonist and, by doing so, address academic or career-related issues. Working through these issues provides students with an opportunity to gain applied perspective and experiences. Professors in higher education who choose this method of teaching require navigational tools to ensure that students achieve stated learning objectives.
