There are many health disorders that are related to the functioning of the nervous system, which is comprised of sensory, motor and autonomic nerves. The “Involuntary Nervous System”, is especially vulnerable to imbalances within it that can occur due to hormone imbalances, vitamin deficiencies, emotional and mental disorders and nervous system, spinal cord and brain abnormalities. Within this approximately 24,000 word e-book, I have compiled a number of responses I made to fellow patients, experiencing nervous system related health disorders, such as peripheral neuropathies, myopathies (neuromuscular problems) and nervous system diseases. These responses, which are presented as well-informed layperson opinions in Q & A form, include my personal experiences with nervous system symptoms as related to my thyroid disease, peripheral neuropathies, myopathy, Mitral Valve Prolapse Syndrome and vitamin deficiency diagnoses. An important aspect of online symptom searches that I mention in several opinions I include in this e-book is on the subject of “cyberchondria” (also called “surf diagnosis induced anxiety”) , a serious anxiety reaction that can occur in patients who do not understand the importance of balanced medical searches, on reputable online sources. It is my hope that these 77 short, individual opinion-posts

On April 23 and 24, 2019 the Forum on Neuroscience and Nervous System Disorders convened a workshop titled "Advancing Gene-Targeted Therapies for Central Nervous System Disorders" in Washington, DC. This public workshop brought together experts and key stakeholders from academia, government, industry, philanthropic foundations, and disease/patient-focused nonprofit organizations to explore approaches for advancing the development of gene-targeted therapies for central nervous system (CNS) disorders, and implications of developing these therapies. Participants explored lessons learned from both successful and unsuccessful clinical development programs; new knowledge about the genetic underpinnings of brain disorders; the current status and future potential of gene-targeted therapies for CNS disorders; challenges and potential solutions for translating preclinical findings to approved therapies; and patient and caregiver perspectives. They also discussed what will be needed to develop these therapies for common disorders such as Alzheimer's and Parkinson's disease, as well as neuropsychiatric and neurodevelopmental disorders such as
