

them with the assistance they need to begin building successful active learning environments in their classrooms. *Active Learning in Secondary and College Science Classrooms: A Working Model for Helping the Learner to Learn* is motivated by fundamental changes in education in response to perceptions that students are not adequately acquiring the knowledge and skills necessary to meet current educational and economic goals. The premise of this book is that active learning offers a highly effective approach to meeting the mandate for increased student knowledge, skills, and performance. It is a valuable resource for all teacher trainers in science education and high school and college science teachers.

Previous edition: *Campbell biology: concepts & connections*, 2012.

Have humans always waged war? Is warring an ancient evolutionary adaptation or a relatively recent behavior--and what does that tell us about human nature? In *War, Peace, and Human Nature*, editor Douglas P. Fry brings together leading experts in such fields as evolutionary biology, archaeology, anthropology, and primatology to answer fundamental questions about peace, conflict, and human nature in an evolutionary context. The chapters in this book demonstrate that humans clearly have the capacity to make war, but since war is absent in some cultures, it cannot be viewed as a human universal. And counter to frequent presumption the actual archaeological record reveals the recent emergence of war. It does not typify the ancestral type of human society, the nomadic forager band, and contrary to widespread assumptions, there is little support for the idea that war is ancient or an evolved adaptation. Views of human nature as inherently warlike stem not from the facts but from cultural views embedded in Western thinking. Drawing upon evolutionary and ecological models; the archaeological record of the origins of war; nomadic forager societies past and present; the value and limitations of primate analogies; and the evolution of agonism, including restraint; the chapters in this interdisciplinary volume refute many popular generalizations and effectively bring scientific objectivity to the culturally and historically controversial subjects of war, peace, and human nature.

Genetika Mendel merupakan bagian dari Ilmu Genetika yang menjadi dasar konsep pewarisan sifat. Di dalam buku ini dikupas sejarah Hukum Mendel I: Segregasi dan Hukum Mendel II: Berpasangan secara bebas atau Independent Assortment lengkap dengan contoh penelitian yang memanfaatkan pengetahuan pewarisan sifat dari Mendel. Dalam perkembangan ilmu genetika selanjutnya, Hukum Mendel tentang Independent Assortment terbukti tidak selalu benar. Fenomena pola pewarisan sifat yang tidak dapat dijelaskan oleh prinsip-prinsip Mendel yang meliputi Dominasi tidak sempurna, alel ganda, kodominan, pleiotropi, gene linkage atau tautan gen, gene terpaut seks dibahas dalam buku ini. Selanjutnya dijelaskan teori Probabilitas dan hubungannya dengan pewarisan sifat dengan dilengkapi contoh-contoh yang mendukung. Penerapan uji Chi-square, Homogenitas Chi-square dalam analisis pewarisan sifat juga dibahas.

Pewarisan Sifat Poligenik dan pemahaman tentang Quantitative Trait Locus (QTL) juga disampaikan dalam buku ini. Pembahasan tentang hubungan antargen yang meliputi interaksi sinergis dan antagonis dalam konsep epistasis juga diberikan dengan contoh-contohnya. Pemetaan gen berdasarkan persentase pindah silang dan rekombinasi baik yang berdasarkan data dua gen ataupun tiga gen disajikan lengkap dengan contoh dan langkah-langkah penghitungannya. Demikian juga perubahan gen (mutasi), jenis-jenis mutasi, macam-macam penyebab mutasi serta bahan kimia yang banyak digunakan untuk praktek mutasi juga dibahas. Pemuliaan dengan memanfaatkan teknik mutasi serta analisis mutasi dengan teknik TILLING (Targeting Induced Local Lesions in Genomes) juga disampaikan. Buku ini diakhiri paparan tentang rekombinasi sifat unggul serta tahap-tahap teknik penyilangan yang merupakan salah satu teknik penggabungan sifat unggul.

In the new edition of *BIOLOGY: CONCEPTS AND APPLICATIONS*, authors Cecie Starr, Christine A. Evers, and Lisa Starr have partnered with the National Geographic Society to develop a text designed to engage and inspire. This trendsetting text introduces the key concepts of biology to non-biology majors using clear explanations and unparalleled visuals. While mastering core concepts, each chapter challenges students to question what they read and apply the concepts learned, providing students with the critical thinking skills and science knowledge they need in life. Renowned for its writing style the new edition is enhanced with exclusive content from the National Geographic Society, including over 200 new photos and illustrations. New People Matter sections in most chapters profile National Geographic Explorers and Grantees who are making significant contributions in their field, showing students how concepts in the chapter are being applied in their biological research. Each chapter concludes with an 'Application' section highlighting real-world uses of biology and helping students make connections to chapter content. Buku ini berisi wacana atau perspektif baru dengan memasukkan kajian kompleksitas sebagai salah satu dasar berpikir untuk memahami sistem kehidupan secara komprehensif yang tidak memisahkan atau mengisolasi bahan aktif atau komponen hidup sebagai materi yang bekerja atau berdiri sendiri. Seluruh komponen penyusun kehidupan bekerja saling melengkapi sehingga analisa pada satu komponen aktif tidak akan bisa menjelaskan berjalannya sistem kehidupan yang sebenarnya terjadi. Pemisahan pada komponen kehidupan pada dasarnya adalah strategi untuk mengatasi keterbatasan daya pikir manusia untuk mencoba memahami fenomena yang terjadi.

Key Benefit: Fred and Theresa Holtzclaw bring over 40 years of AP Biology teaching experience to this student manual. Drawing on their rich experience as readers and faculty consultants to the College Board and their participation on the

AP Test Development Committee, the Holtzclaws have designed their resource to help your students prepare for the AP Exam. * Completely revised to match the new 8th edition of Biology by Campbell and Reece. * New Must Know sections in each chapter focus student attention on major concepts. * Study tips, information organization ideas and misconception warnings are interwoven throughout. * New section reviewing the 12 required AP labs. * Sample practice exams. * The secret to success on the AP Biology exam is to understand what you must know—and these experienced AP teachers will guide your students toward top scores! Market Description: Intended for those interested in AP Biology. ??????????????????????

One of the challenges faced by every cell as well as by whole organisms is to maintain appropriate concentrations of essential nutrient metals while excluding nonessential toxic metals. Toward that end, all organisms have developed mechanisms for metal homeostasis and detoxification to maintain metal levels within physiological limits. This book brings together current knowledge of the molecular basis of metal homeostasis and detoxification in various eukaryotic model systems, including yeasts, plants, and mammals. It focuses on the cellular systems controlling metal transport, intracellular distribution, and immobilization as well as on systems regulating metal-dependent transcription. In addition to environmental aspects (including phytoremediation), the book treats the pathophysiology of metal deficiency and overload in relation to disease.

Since 1954, Campbell-Walsh Urology has been internationally recognized as the pre-eminent text in its field. Edited by Alan J. Wein, MD, PhD(hon), Louis R. Kavoussi, MD, Alan W. Partin, MD, PhD, Craig A. Peters, MD, FACS, FAAP, and the late Andrew C. Novick, MD, it provides you with everything you need to know at every stage of your career, covering the entire breadth and depth of urology - from anatomy and physiology through the latest diagnostic approaches and medical and surgical treatments. Be certain with expert, dependable, accurate answers for every stage of your career from the most comprehensive, definitive text in the field! Required reading for all urology residents, Campbell-Walsh Urology is the predominant reference used by The American Board of Urology for its board examination questions. Visually grasp and better understand critical information with the aid of algorithms, photographs, radiographs, and line drawings to illustrate essential concepts, nuances of clinical presentation and technique, and decision making. Stay on the cutting edge with online updates. Get trusted perspectives and insights from hundreds of well-respected global contributors, all of whom are at the top and the cutting edge of their respective fields. Stay current with the latest knowledge and practices. Brand-new chapters and comprehensive updates throughout include new information on perioperative care in adults and children, premature ejaculation, retroperitoneal tumors, nocturia, and more! Meticulously revised chapters cover the most recent advancements in robotic and laparoscopic bladder surgery, open surgery of the kidney, management of metastatic and invasive bladder cancer, and many other hot topics!Reference information quickly thanks to a new, streamlined print format and easily searchable online access to supplemental figures, tables, additional references, and

expanded discussions as well as procedural videos and more at www.expertconsult.com. The new edition of Campbell-Walsh Urology is the must have reference for practitioners and residents!

Helping students understand why biology matters Campbell Essential Biology makes biology interesting and understandable for non-majors biology students. This best-selling textbook, known for its scientific accuracy, clear explanations, and intuitive illustrations, has been revised to further emphasize the relevance of biology to everyday life, using memorable analogies, real-world examples, conversational language, engaging new Why Biology Matters photo essays, and more. New MasteringBiology activities engage students outside of the classroom and help students develop scientific literacy skills. Also available with MasteringBiology MasteringBiology is an online homework, tutorial, and assessment product that improves results by helping students quickly master concepts. Students benefit from self-paced tutorials that feature immediate wrong-answer feedback and hints that emulate the office-hour experience to help keep students on track. With a wide range of interactive, engaging, and assignable activities, many of them contributed by Essential Biology authors, students are encouraged to actively learn and retain tough course concepts. New MasteringBiology activities for this edition include “Essential Biology” videos that help students efficiently review key topics outside of class, “Evaluating Science in the Media” activities that help students to build science literacy skills, and “Scientific Thinking” coaching activities that guide students in understanding the scientific method.

In this new fourth edition, Campbell has revised and updated his classic introduction to the field. Human Evolution synthesizes the major findings of modern research and theory and presents a complete and integrated account of the evolution of human beings. New developments in microbiology and recent fossil records are incorporated into the enormous range of this volume, with the resulting text as lucid and comprehensive as earlier editions. The fourth edition retains the thematic structure and organization of the third, with its cogent treatment of human variability and speciation, primate locomotion, and nonverbal communication and the evolution of language, supported by more than 150 detailed illustrations and an expanded and updated glossary and bibliography. As in prior editions, the book treats evolution as a concomitant development of the main behavioral and functional complexes of the genus *Homo* among them motor control and locomotion, mastication and digestion, the senses and reproduction. It analyzes each complex in terms of its changing function, and continually stresses how the separate complexes evolve interdependently over the long course of the human journey. All these aspects are placed within the context of contemporary evolutionary and genetic theory, analyses of the varied extensions of the fossil record, and contemporary primatology and comparative morphology. The result is a primary text for undergraduate and graduate courses, one that will also serve as required reading for anthropologists, biologists, and nonspecialists with an interest in human evolution. "Synthesizes the conventional academic

thought into a textbook or detailed account for lay readers. Along the chronological narrative are discussions of progress in homeostasis, the primate radiation, locomotion and the hindlimb, function and structure of the head, reproduction and social structure, and culture and society." Book News Bernard Campbell has been a visiting lecturer at Harvard and Cambridge, and has taught and conducted research in Eastern and Southern Africa. He was professor of anthropology at the University of California, Los Angeles, from 1970-76. Dr. Campbell is author/coauthor of Sexual Selection and the Descent of Man; Human Ecology (second edition, Aldine); Humankind Emerging and the definitive three-volume Catalogue of Fossil Hominids.
