Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

??

This basic source for identification of U.S. manufacturers is arranged by product in a large multi-volume set. Includes: Products & services, Company profiles and Catalog file.

A comprehensive guide to MEMS materials, technologies and manufacturing, examining the state of the art with a particular emphasis on current and future applications. Key topics covered include: Silicon as MEMS material Material properties and measurement techniques Analytical methods used in materials characterization Modeling in MEMS Measuring MEMS Micromachining technologies in MEMS Encapsulation of MEMS components Emerging process technologies, including ALD and porous silicon Written by 73 world class MEMS contributors from around the globe, this volume covers materials selection as well as the most important process steps in bulk micromachining, fulfilling the needs of device design engineers and process or development engineers working in manufacturing processes. It also provides a

comprehensive reference for the industrial R&D and academic communities. Veikko Lindroos is Professor of Physical Metallurgy and Materials Science at Helsinki University of Technology, Finland. Markku Tilli is Senior Vice President of Research at Okmetic, Vantaa, Finland. Ari Lehto is Professor of Silicon Technology at Helsinki University of Technology, Finland. Teruaki Motooka is Professor at the Department of Materials Science and Engineering, Kyushu University, Japan. Provides vital packaging technologies and process knowledge for silicon direct bonding, anodic bonding, glass frit bonding, and related techniques Shows how to protect devices from the environment and decrease package size for dramatic reduction of packaging costs Discusses properties, preparation, and growth of silicon crystals and wafers Explains the many properties (mechanical, electrostatic, optical, etc), manufacturing, processing, measuring (incl. focused beam techniques), and multiscale modeling methods of MEMS structures

Indexes are arranged by geographic area, activities, personal name, and consulting firm name.

The Wiley Encyclopedia of Packaging Technology Packaging technology is of vital importance in all manufacturing industries. The Wiley Encyclopedia of Packaging Technology is designed to provide a comprehensive reference

incorporating 188 topics from "Acrylics" to "Zero-Crush Concept" for a wide audience of engineers, technologists, and scientists who seek an introduction to unfamiliar aspects of the packaging process. In addition to providing an exhaustive reference for packaging engineers, the book is also designed to serve, for example, polymer chemists developing new products. It will also meet a need in all technical libraries for an authoritative basic reference on packaging. The 188 entries have been written by 225 acknowledged experts in academia and industry, and each has been reviewed by other experts in the field for completeness and objectivity. This encyclopedia provides coverage of all stages of the packaging process from raw materials through distribution. Multiple articles are included on all major topics, such as bags, boxes, cans, cartons, coextrusion machinery, decorating, filling machinery, films, plastics, steel, and testing. A significant contribution to packaging literature, this encyclopedia brings together in a single volume expertise from many disciplines. It contains many landmark articles, such as blow molding, corrugated boxes, fabricated cans, steel cans, economics of packaging, glass container design, glass container manufacturing, indicating devices, multilayer flexible packaging, paper, specifications and quality assurance, and international standards and practices. Numerous bibliographies accompany the articles. In addition, the encyclopedia includes over 200 tables

and nearly 600 figures—all prepared with the cooperation of a distinguished Advisory Board. The result is a unique, informative work that will serve the diverse interests and concerns of those in the field of packaging with authoritative, reliable, state-of-the-art information of the subject.

This Part of YY/T 0681 specifies a uniform method for evaluating the ability of sterile medical device shipping units to withstand the transport environment in the laboratory. This Part is used for guiding the user to design an appropriate test plan, so that the shipping unit can withstand a series of expected hazards to be experienced in a specific distribution cycle.

The complete and authoritative guide to modern packaging technologies—updated and expanded From A to Z, The Wiley Encyclopedia of Packaging Technology, Third Edition covers all aspects of packaging technologies essential to the food and pharmaceutical industries, among others. This edition has been thoroughly updated and expanded to include important innovations and changes in materials, processes, and technologies that have occurred over the past decade. It is an invaluable resource for packaging technologists, scientists and engineers, students and educators, packaging material suppliers, packaging converters, packaging machinery manufacturers, processors, retailers, and regulatory agencies. In addition to updating and improving articles from the

previous edition, new articles are also added to cover the recent advances and developments in packaging. Content new to this edition includes: Advanced packaging materials such as antimicrobial materials, biobased materials, nanocomposite materials, ceramic-coated films, and perforated films Advanced packaging technologies such as active and intelligent packaging, radio frequency identification (RFID), controlled release packaging, smart blending, nanotechnology, biosensor technology, and package integrity inspection Various aspects important to packaging such as sustainable packaging, migration, lipid oxidation, light protection, and intellectual property Contributions from experts in all-important aspects of packaging Extensive cross-referencing and easy-to-access information on all subjects Large, double-column format for easy reference

This Standard provides a guide for design and evaluation of primary flexible packaging for medical devices. This Standard does not involve acceptability criteria.

YY/T 1759-2020: Translated English of Chinese Standard. (YYT 1759-2020, YY/T1759-2020, YYT1759-2020)Guide for Design and Evaluation of Primary Flexible Packaging for Medical Devices<https://www.chinesestandard.net>

Vols. for 1970-71 includes manufacturers catalogs.

New expanded second edition with key technical, regulatory and marketing developments from the past 10 years in the packaging industryCovers the materials, processes, and design of

virtually all paper and fiberboard packaging for end-products, displays, storage and distribution
New information on European and global standards, selection criteria for paperboard, as well as emerging sustainability initiatives
Explains recent tests, measurements and costs with ready-to-use calculations
Ten years ago, the first edition of *Cartons, Crates and Corrugated Board* quickly became the standard reference book for wood- and paper-based packaging. Endorsed by TAPPI and other professional societies and used as a textbook worldwide, the book has now been extensively revised and updated by a team formed by the original authors and two additional authors. While preserving the critical performance and design data of the previous edition, this second expanded edition offers new information on the technologies, tests and regulations impacting the paper and corrugated industries worldwide, with a special focus on Europe and Japan. New information has been added on tests and novel designs for folded cartons, as well as expanded discussions of paperboard selection for specific applications, emerging barrier packaging, food contact and migration, and the dynamics and opportunities of corrugated in distribution systems. Recent developments on recycling and sustainability are also highlighted.
