A thumb print left at the scene of a grisly murder. Fingerprints taken from a getaway car used in a bank robbery. A palm print recovered from the shattered glass door of a burglarized home. Indeed, where crimes are committed, careless perpetrators will invariably leave behind the critical pieces of evidence—most likely in the form of fingerprints—needed to catch and convict them. But the science of fingerprint identification isn't always as cut and dry as detective novels and movies make it out to be. Quantitative-Qualitative Friction Ridge Analysis, a new book in the ongoing Practical Aspects of Criminal and Forensic Investigations series, examines the latest methods and techniques in the science of friction ridge identification, or ridgeology. David R. Ashbaugh examines every facet of the discipline, from the history of friction ridge identification and its earliest pioneers and researchers, to the scientific basis and the various steps of the identification process. The structure and growth of friction skin and how it can leave latent or visible prints are examined, as well as advanced identification methods in ridgeology, including Poroscopy, Edgeoscopy, Pressure Distortion and Complex or

Problem Print Analysis. The book, which features several detailed illustrations and photographs, also includes a new method for Palmar Flexion Crease Identification (palm lines) designed by the author and which has helped solve several criminal cases where fingerprints were not available. John Rollin Ridge is the first full-length biography of a Cherokee whose best revenge was in writing well. A cross between Lord Byron, the romantic poet who made things happen, and Joaquin Murieta, the legendary bandit he would immortalize, John Rollin Ridge was a controversial, celebrated, and self-cast exile. Ridge was born to a prominent Cherokee Indian family in 1827, a tumultuous and violent time when the state of Georgia was trying to impose its sovereignty on the Cherokee Nation and whites were pressing against its borders. James W. Parins places Ridge in the circle of his family and recreates the circumstances surrounding the assassination of his father (before his eyes) and his grandfather and uncle by rival Cherokees, led by John Ross. Eventful chapters portray the boy's flight with his mother and her family to Arkansas, his classical education there, his killing of a Ross loyalist and subsequent exile in California during the gold rush, his talent as a romantic poet and author, and his career as a journalist. To the end of his life, Ridge advocated the Cherokees' assimilation into white society.
