An up-to-date perspective on laser technology for students at advanced undergraduate or introductory graduate level. The principles of operation and applications of modern laser systems are analysed in detail. The text has over 300 diagrams and each chapter is accompanied with questions (solutions available on application).

????????????? Pod, Homily, and Arrietty Clock's huge adventures have been thrilling children young and old for fifty years--and their appeal is as strong as ever in these handsome new paperback packages. While the original beloved interior illustrations by Beth and Joe Krush have been retained, Marla Frazee's striking cover illustrations capture these little people with a larger-than-life appeal.

This book details groundbreaking experiments for
the sensing and imaging of terahertz-frequency
electromagnetic radiation (THz) using Rydberg
atoms. The major advances described include the
development and implementation of a new technique
for THz imaging using atomic fluorescence; the
demonstration of a THz-driven phase transition in
room-temperature atomic vapour; and a novel
method for probing the excited-state dynamics of

atoms facilitate novel scientific opportunities relevant to the condensed-matted community? This volume seeks to be comprehensible rather than comprehensive; it aims at the level of a colloquium, accessible to outside readers, containing only minimal equations and limited references. In large part, it relies on many beautiful experiments from the past fifteen years and their very fruitful interplay with basic theoretical ideas. In this particular context, phenomena most relevant to condensed-matter science have been emphasized.

Introduces ultracold Bose and Fermi quantum gases at a level appropriate for non-specialists Discusses landmark experiments and their fruitful interplay with basic theoretical ideas Comprehensible rather than comprehensive, containing only minimal equations
