Called to Account takes a broad perspective on how financial frauds have shaped the public accounting profession by focusing on cases of fraud around the globe. Ever entertaining and educational, the book traces the development of the accounting standards and legislation put in place as a direct consequence of these epic scandals. The new edition offers updated chapters on ZZZZ Best and Arthur Andersen, plus new chapters devoted to Parmalat, Satyam, and The Great Recession. Through stories like Barry Minkow's staged constructions sites and MiniScribe's fake inventory number generating computer program, "Cook Book", students will learn that fraud is nothing new, and that financial reform is heavily influenced by politics. With discussion questions and a useful chart showing instructors and students how each chapter illustrates the topics covered in other textbooks, Called to Account is the ideal companion for any class in auditing, advanced accounting or forensic accounting.

Each chapter stands alone by focusing on an individual internal auditing theme, considered from both the perspective of internal auditing and its customers to suggest an appropriate vision as a goal for every internal audit activity. Each chapter also includes self-assessment questions to challenge the readers understanding of its messages. The complexity of human behavior challenges our explanatory powers. Yet, in this day and age we desperately try to manage and control the behavior of our corporate citizens through rules, codes, systems and procedures alike. This study is an illustration that true human behavior cannot simply be controlled by (more of) such rules. Instead, it is driven by many psychological, cultural, contextual, and environmental factors. The focus of this study is the influence of cross-national cultural differences in the context of the professional behavior of auditors, based on the central question: Is auditors' professional behavior affected by crossnational cultural differences, and, if so, how? Being based on grounded theory, in part validated within an international accounting organization, this study is the first to provide a more profound, in-depth, and contextualized analysis and understanding of the effect of cross-national cultural differences on the behavior of professionals in general, and that of auditors in particular.
