The Auditing Standards Board (ASB) has issued Statement on Auditing Standards (SAS) No. 129, Amendment to Statement on Auditing Standards No. 122 Section 920, Letters for Underwriters and Certain Other Requesting Parties, as amended (AICPA, Professional Standards, AU-C sec. 920), to address unintended changes to previous practice as a result of its Clarity Project. AU-C section 920 addresses the auditor's responsibilities when engaged to issue letters (commonly referred to as comfort letters) to requesting parties in connection with a nonissuer entity's financial statements included in a registration statement or other securities offerings. This amendment amends the requirement to inform the requesting party that the auditor cannot provide any assurance regarding the sufficiency of the procedures for the requesting party's purposes by changing "state in any discussion" to "communicate" so as to provide the auditor with more flexibility in making this required communication. clarifies that the requirement for the auditor to read the comfort letter issued by component auditors whose report is included in the securities offering applies to each component auditor, not only those comfort letters related to significant components. amends the requirement to attach the review report when the

auditor states in the comfort letter that the auditor has performed a review of unaudited interim financial information to a requirement to attach the review report when the auditor states in the comfort letter that the auditor has issued a review report on unaudited interim financial information. amends application material to indicate that attaching the review report on unaudited interim financial information is required when the auditor states in the comfort letter that the auditor has issued a review report on unaudited interim financial information. amends example D to change the concluding paragraph from referring to the pro forma bases described in the notes to the pro forma financial statements to referring to the applicable accounting requirements of Rule 11-02 of Regulation S-X and renumbers example D as example D-1. adds example D-2 to address providing negative assurance on pro forma financial information as to compliance with pro forma bases as described in the pro forma financial information. amends example O to include wording to address procedures performed with regard to pro forma information and subsequent change period not previously carried forward from AU section 634, Letters for Underwriters and Certain Other Requesting Parties. makes additional editorial changes for clarity and consistency. SAS No. 129 is effective for comfort letters issued on or after December 15, 2014. Early implementation is encouraged.

The fundamental values central to the Messier Jr./Glover/Prawitt text include: student engagement, a systematic approach, and decision making. Student Engagement: The authors believe students are best served by acquiring a strong understanding of the basic concepts that underlie the audit process and how to apply those concepts to various audit and assurance services. The text is accessible to students through straightforward writing and the use of engaging, relevant real-world examples, illustrations, and analogies. The text explicitly encourages students to “stop and think” at important points in the text to help them apply principles covered and also helps students see the application of concepts in a practical setting through “practice insight” boxes. A Systematic Approach: The authors first introduce the three underlying concepts of audit risk, materiality, and evidence, then follow with a discussion of audit planning, the assessment of control risk, and a discussion of the nature, timing, and extent of evidence necessary to reach the appropriate level of detection risk. These concepts are then applied to each major business process and related account balances using a risk-based approach, (in following with the new standards adopted by the various auditing boards). Decision Making: Since much of auditing practice involves the application of auditor judgment, the authors focus on critical judgments and decision-making processes. If a student understands

these basic concepts and how to apply them to an audit engagement, he or she will be more effective in today's dynamic audit environment. The new edition even includes a full advanced module on Professional Judgment.

The role of internal audit is changing. The Sarbanes-Oxley legislation in the US and the Combined Code for Corporate Governance in the UK focused on the need to demonstrate the active management of risks and report on this subject to shareholders. Boards of Directors are therefore increasingly requiring their Internal Audit functions to provide a much higher level of assurance in this regard. Phil Griffiths' Risk-Based Auditing explains the concepts and practice behind a risk-based approach to auditing. He explores the changing environment in both the private and public sectors and the associated legislation and guidance. The book then provides a blueprint for refocusing the internal audit role to embrace risk and to help plan, market, undertake and report a risk-based audit. The text includes a detailed risk-based audit toolkit with 14 sections of tools, techniques and information to enable a risk-based approach to be adopted. This is an essential guide for internal and external auditors seeking to manage the realities of the audit function in the turbulent and fast-changing business environment that has emerged since the end of the last century.

Principles of External Auditing has become established as one of the leading textbooks for students studying auditing. Striking a careful balance between theory and practice, the book describes and explains, in non-technical language, the nature of the audit function and the principles of the audit process. The book covers international auditing and accounting standards and relevant statute and case law. It explains the fundamental concepts of auditing and takes the reader through the various stages of

the audit process. It also discusses topical aspects of auditing such as legal liability, audit risk, quality control, and the impact of information technology. Brenda Porter is currently visiting Professor at Exeter University and Chulalongkorn University, Bangkok. The reputation of corporate reporting has been in crisis. Trust in the process of financial accounting and auditing has been undermined by a series of high profile scandals involving major corporations, including Enron, Parmalat, Ahold, and Worldcom. In response, regulators and practitioners world-wide have put forward a series of initiatives to repair the damage and restore faith in corporate governance. In this important book, the European Auditing Research Network analyzes how that response has developed in Europe, with particular emphasis on the field of auditing. Leading international academics review how regulation has been revised in specific European countries to help restore confidence in the contribution of auditing to corporate governance. Various themes are explored, including the growing trend of internationalization in regulation, ethics and auditing, professional liability, and professional education. Auditing, Trust and Governance is an invaluable volume for students, researchers and professionals working in the fields of auditing, accountancy and corporate governance, and provides a useful basis for further research on the effects of the increased regulation.

comprehensive guide to monitoring the state of the local environment and establishing the impacts of local actions on global issues, and shows how current local authority policy and practice can be adapted to recognize environmental priorities. The authors provide both a guide to and an assessment of the subject: they link the processes with the issues, with specific information on carrying out the audit (including checklists, case studies and standards) and a detailed discussion of the issues and choices which local authorities may face. Clearly structured and accessible, this will be an essential handbook, both for local government departments and other local organizations, and students in a wide range of subjects, including environmental science and health, town planning, urban and rural studies, social science and politics.

Cases in Auditing presents students with realistic problems in a case study format, which they are required to solve by applying their knowledge of auditing theory and auditing and accounting standards. The cases require the student to adapt auditing techniques to the demands of a particular situation. The author believes that structuring the book in this way gives the student an appreciation of the need for the auditor to identify the key elements of a client's business, and design an audit that is responsive to them. The Second Edition contains updated versions of 14 of the earlier cases and adds 8 new cases covering: an audit of a computerized accounting system; auditor

liability; corporate governance; environmental audit; internal audit and the external auditor; ethics and independence; illegal acts by a client; and risk and audit planning. There are questions for discussion and suggestions for suitable reading for each case. Current and future issues in the global accounting/consulting, business opportunity, and credit rating agency (CRA) industries can have significant multiplier-effects on international trade, sustainable growth, and compliance (as physical phenomena). These three industries are among the most international and human-capital-intensive of all service industries. In these industries, analysis of business models and industry dynamics can provide insights about how human-computer interaction (HCI) and contract theory affect the evolution of financial market ecosystems and cross-border information flows, and how business models, work-allocation mechanisms, and liability allocation can evolve to manage change. An often-overlooked issue is that non-performing loans (NPLs), sustainability, and CRA efficiency can be significantly affected by business processes, corporate strategy, and HCI in industry ecosystems, multinational corporations (MNCs), and economic systems. Complex Systems and Sustainability in the Global Auditing, Consulting, and Credit Rating Agency Industries compares these three industries and introduces theories of public policy and “inter-business” processes. The book links industry structure, complex systems (including networks), behavioral game theory, structural changes, and antitrust problems to sustainability and the efficiency of pollution-remediation systems. The book introduces

new “informal algorithms” and business/resource-allocation models that solve social-choice problems, and also contravene “impossibility theorems” that are at the core of modern computer science and mechanism design. This book is essential for professors and masters/PhD-level students and employees (in industry, financial services, research institutes, consulting firms, and government agencies) who are interested in industrial mathematics and theoretical computer science.
