Commercial Design Using Revit Architecture 2013 is designed for the architectural student using Revit Architecture 2013. The intent is to provide the student with a well-rounded knowledge of tools and techniques for use in both school and industry. This text takes a project based approach to learning Revit Architecture in which the student develops a three story office building. Each book comes with a DVD containing numerous video presentations of the written material. General building codes and industry standard conventions are covered in a way that is applicable to the current exercise. The first two chapters are intended to get the reader familiar with the user interface and many of the common menus and tools of Revit Architecture 2013. A small office is created in chapter two to show just how easy it is to get started using Revit Architecture. By the end of chapter two the student will be excited and prepared to take on a much larger project. Throughout the rest of the book the student develops a three story office building. The drawings start with the floor plans and develop all the way to photo-realistic renderings like the one on the cover of

this book. In these chapters the many tools and features of Revit Architecture 2013 are covered in greater detail.

This double volume set (LNAI 10863-10864) constitutes the refereed proceedings of the 25th International Workshop, EG-ICE 2018, held in Lausanne, Switzerland, in June 2018. The 58 papers presented in this volume were carefully reviewed and selected from 108 submissions. The papers are organized in topical sections on Advanced Computing in Engineering, Computer Supported Construction Management, Life-Cycle Design Support, Monitoring and Control Algorithms in Engineering, and BIM and Engineering Ontologies.

The successful design and construction of iconic new buildings relies on a range of advanced technologies, in particular on advanced modelling techniques. In response to the increasingly complex buildings demanded by clients and architects, structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work. Advanced Modelling Techniques in Structural Design introduces numerical analysis methods to both students and design practitioners. It illustrates the modelling techniques used to solve structural design problems, covering most of the issues that an engineer might face, including lateral stability design of tall buildings; earthquake; progressive collapse; fire, blast and vibration analysis; non-linear geometric analysis and buckling analysis . Resolution of these design problems are demonstrated using a range of prestigious projects around the world, including the Buji Khalifa; Willis Towers; Taipei 101; the Gherkin; Millennium Bridge; Millau viaduct and the Forth Bridge, illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems.
