An exploration of Anglo-Saxon charters, bringing out their complexity and highlighting a range of broad implications.

An in-depth exhaustive examination of college football's system in how they determine their National Champion at the FBS level of play. The facts and evidence within this research and literary work proves that college football does possess an un-fair systems in determining their National Champion. This research possesses over 100 Tables to support the facts and evidence to prove that the BCS was un-fair. The author did develop a selection and seeding process for a 16-Team Playoff format which is "Inclusive" to all FBS programs to be eligible for the \$50 Million dollars on the table and to be called "National Champion."

Despite decades of greater gender awareness at work in Western countries, gender inequality in the executive suites is alive and well. "The Face of the Firm" highlights new critical perspectives on the relationship between hegemonic masculine cultures, gender embodiment, and gender disparities in corporate organizations. Using data from over 100 interviews with female and male executives who worked for some of the most prestigious advertising and

computer firms in the world, the book makes important connections between the empirical data and contemporary sexism in the United States and United Kingdom. The book refocuses the debate of executive work, organizational spaces, and gender inequality on gendered bodies at work. It also demonstrates that gendered and sexualized relations among executives often construct the production process. The book makes a contribution to masculinity, gender, and work scholarship and is organized along three key concepts: homogeneity, homosociability, and heterosexuality. These address such factors as the organizational locker room, sexual and heterosexual spaces at work, and the construction of women and men as different workers. This conceptual model is crucial for evaluating the mechanisms that support male dominance among highly skilled professionals and executives."

This is an engaging new study of how kingship and royal government operated in the late Anglo-Saxon period.

Named a Top Five Book of 2011 by Physics Today, USA. The BCS theory of superconductivity developed in 1957 by Bardeen, Cooper and Schrieffer has been remarkably successful in explaining the properties of superconductors. In addition, concepts from BCS have been incorporated into diverse fields of physics, from nuclear physics and dense quark matter to the current standard

model. Practical applications include SQUIDs, magnetic resonance imaging, superconducting electronics and the transmission of electricity. This invaluable book is a compilation of both a historical account and a discussion of the current state of theory and experiment. With contributions from many prominent scientists, it aims to introduce students and researchers to the origins, the impact and the current state of the BCS theory.

This book contains a full exposition of the Bardeen-Cooper-Schrieffer (BCS) theory and its experimental verification, the Ginzburg-Landau theory, and the Gor'kov treatment of superconductivity. It discusses the fundamental experiments on macroscopic quantum phenomena and the Josephson effect.

Vols. for 1968/69- include the society's Annual report, 45th-

The #1 maternity book in the market is getting even better. *Maternity and Women's Health Care*, 11th Edition provides evidence-based coverage of everything you need to know about caring for women of childbearing age. Not only does this text emphasize childbearing concerns like newborn care, it also addresses wellness promotion and management of women's health problems. In describing the continuum of care, it integrates the importance of understanding family, culture, and community-based care. Boasting new medication alerts and updated content throughout, this edition covers the new maternal levels of care, and the revised AAP policy on breastfeeding and infant sleep. Expert authors of the market-leading maternity nursing textbook deliver the most accurate, up-to-date content. Clinical reasoning case studies

provide you with opportunities to test and develop your analytical skills and to apply knowledge in various settings. Community Activity boxes focus on maternal and newborn activities that can be pursued in local community settings and illustrate nursing care in a variety of settings. Cultural Considerations stress the importance of considering the beliefs and health practices of patients from various cultures when providing care. Emergency boxes provide information about various emergency situations and offer a quick reference in critical situations. Family-Centered Care boxes highlight the needs and concerns of families that you should consider to provide family-centered care. Medication guides provide an important reference of drugs and their interactions. Nursing care plans include rationales for interventions and provide you with an overview of, and specific guidelines for, delivering effective nursing care. Safety alerts highlighted and integrated within the content draw attention to developing competencies related to safe nursing practice. Signs of potential complications highlight vital concerns, alerting you to signs and symptoms of complications and the immediate interventions to provide. Teaching for Self-Management boxes highlight important information that nurses need to communicate to patients and families for follow-up care.

This unique volume reviews more than fifty years of theoretical and experimental developments of the concept that properties of atomic nuclei up to a great extent are defined

by the pair correlations of nuclear constituents — protons and neutrons. Such correlations in condensed matter are responsible for quantum phenomena on a macroscopic level — superfluidity and superconductivity. After introducing Bardeen–Cooper–Schrieffer (BCS) theory of superconductivity of metals, it became clear that atomic nuclei have properties of superfluid drops, and practically all features of nuclei strongly depend on the pair correlations. Presenting a comprehensive overview of the progress of nuclear science, the contributions from leading physicists around the world, cover the whole spectrum of studies in nuclear physics and physics of other small systems. With the most updated information written in an accessible way, the volume will serve as an irreplaceable source of references covering many years of development and insight into several new problems at the frontiers of science. It will be useful not only for physicists working in nuclear and condensed matter physics, astrophysicists, chemists and historians of science, but will also help students understand the current status and perspectives for the future. Contents:BCS Pairing (and Beyond) in Nuclear Structure and DynamicsThe Nuclear Pairing Interaction in Finite Nuclei and in Neutron StarsSingle- and Multiple-Pair Tunneling in Nuclear Reactions (Experiment and Theory)Pairing in Nuclei in An External Time-Reversal Violating Field: Rapidly Rotating NucleiThe Nuclear BCS (Pairing) Paradigm in Other Many-Body Systems Readership: Nuclear and theoretical physicists, chemists and astrophysicists. Keywords:Nuclear Structure;Transfer Reactions;Nuclear Superfluidity;Nuclear Matter;Neutron Star Crust;Pairing In Fermi SystemsKey Features:Currently there are no competing titles on the market, the books of this breadth and depth were not published beforeThe contributors are experts from leading institutions of the world
