A Nobel Prize-winning physicist explains what happened at the very beginning of the universe, and how we know, in this popular science classic. Our universe has been growing for nearly 14 billion years. But almost everything about it, from the elements that forged stars, planets, and lifeforms, to the fundamental forces of physics, can be traced back to what happened in just the first three minutes of its life. In this book, Nobel Laureate Steven Weinberg describes in wonderful detail what happened in these first three minutes. It is an exhilarating journey that begins with the Planck Epoch - the earliest period of time in the history of the universe - and goes through Einstein's Theory of Relativity, the Hubble Red Shift, and the detection of the Cosmic Microwave Background. These incredible discoveries all form the foundation for what we now understand as the "standard model" of the origin of the universe. The First Three Minutes examines not only what this model looks like, but also tells the exciting story of the bold thinkers who put it together. Clearly and accessibly written, The First Three Minutes is a modern-day classic, an unsurpassed explanation of where it is we really come from.

new improved English translation of William Gilbert's banned Latin 1600 'De Magnete' or 'On The Magnet'. This is rather easier to read than its two earlier translations, and significantly helps to clarify Gilbert's 'attraction' physics which Newton put as one of the two mathematized physics options and which he is believed to have privately favoured. It is basically a novel signal-response or remote-control physics that may still have relevance.

grounded. This new theory will explain the forces within a beam of light interacting with gravity while the beam of light propagates within the gravitational field generated by a black hole. When we look at modern Physics, we can only be impressed by an enormous amount of knowledge and a complete New World of technical applications. We now live in the century of the impressive victory of the new science and the new technology over the old-fashioned world and the old-fashioned way of thinking. Great shifts in the way of thinking and the technological achievements are mostly characterized by an important scientific publication in a century that changes everything in that century.

This book is for those in quest of Reality. The first two chapters deal with the Origin and Process of Creation. Nobel Prize-winning quantum physicists and others of the twentieth-century had their first non-sensory experience of reality, as the Mystics did. The models of modern physics became akin to those of Eastern philosophy. Modern

science has discovered a reality beyond the physical world, endorsing ancient Vedic teachings of Illusion, that Truth or Reality does not lie in what is seen but in what is unseen. Vedanta deals with the Origen and the Beginning of Creation. Science does not deal with the origin of the universe, but only describes the early beginnings and evolutions, after the event-CRNS Scientist. “The day science begins to study non-physical phenomena; it will make more progress in one decade than in all the previous centuries of its existence” Nikolai Tesla. The book refers to the world at a deeper level, and describes the Sub-structure, the Absolute Substance and the Ground of all Existence. It describes how Mind creates matter by dissolving the distinction between subject and object through acts of conscious observation and interaction. Modern Science is changing western thinking to converge with the revelations of the ancient seers, re-strengthening mankind’s belief in a Supreme Being. From here on, Nature, Man and God all seem to converge.
