This history of the feminist critique of science, is of profound significance and will be of interest to all those who work in the fields of anthropology, archaeology, paleontology, and human biology. This volume, the first of its kind, examines the role of women paleontologists and archaeologists in a field traditionally dominated by men. Women researchers in this field, have questioned many of the assumptions and developmental scenarios advanced by male scientists. As a result of such efforts, women have forged a more central role in models of human development and have radically altered the way in which human evolution is perceived. This history of the feminist critique of science, is of profound significance and will be of interest to all those who work in the fields of anthropology, archaeology, paleontology, and human biology.

John Bodley's Cultural Anthropology provides students with the anthropological tools to question and understand their own culture and the world. The sixth edition of this dynamic book has been updated and revised throughout, with a shorter length and a more streamlined focus. Updates include material on China and Hindu South Asia combined into a single chapter, a new chapter assessing the imperial world and the breakdown of states, and new examples throughout. In this introduction to the basic concepts of cultural anthropology, Bodley challenges students to consider "big questions" about the nature of cultural systems: What is "natural" and what is "cultural" about humans? What is it like to be human under different cultural conditions, and how do socio-cultural systems of different cultural scales satisfy basic human needs? Are race, language, and environment determinants of culture? What are the human costs and benefits of socioeconomic growth? What have been the major turning points in human history? What role do individuals play in shaping culture? Employing a scale and power approach, the text examines a representative sampling of the world's major cultural areas and dominant civilizations, from Australian Aborigines, Amazonia, and East African pastoralists to Pacific Islanders, Mesopotamia, China, Hindu India, the British Empire, and the United States; these cultures are shown in depth, as adapting, integrated systems—and as part of regional, continental, and global systems. He concludes the text with a wide-ranging assessment of human problems in the contemporary commercial world, emphasizing inequality, poverty, environmental degradation, and sustainability. A complimentary instructor's manual, test bank, and companion

website are available to enhance teaching and learning. See "Resources" tab for additional information.

Ideal for introduction to archaeology and world prehistory courses, *The Past in Perspective: An Introduction to Human Prehistory, Sixth Edition*, is an engaging and up-to-date chronological overview of human prehistory. Kenneth L. Feder introduces students to "the big picture"--the grand sweep of human evolutionary history--presenting the human past within the context of fundamental themes of cultural evolution. Written in a refreshingly accessible voice, this unique narrative personalizes the past and makes it relevant to today's students. Using a consistent chapter format--"Prelude, Chronicle, Issues and Debates, and Case Study Close-up"--Feder helps students master both what we definitely know and what is still debatable about the complex story of the human past. New to This Edition: An expanded discussion of techniques in the discovery, analysis, and interpretation of archaeological sites (Ch. 2) A new section on archaeological ethics Updated coverage of the earliest human settlement of the Pacific and in the New World (Ch. 7) A new "Issues and Debates" discussion: Was the Development of Civilization a Good Thing? (Ch. 10) Updated treatment of the Indus Valley and the development of the state in ancient China (Ch. 11) An expanded presentation of the Inca, including a new "Case Study Close-up" on child sacrifice (Ch. 13) A new "Case Study Close-up" (Ch. 14), organized to focus exclusively on North America

Intended to supplement introductory/cultural anthropology courses, this text includes coverage of 13 different cultures. The format for each is basically as follows: a map places the culture in geographical context; a creation myth introduces the culture; a general introduction and history of the people follows; a socio-political analysis and/or an economic analysis is discussed; and their religious belief-systems are examined.

The edited volume, *Trauma in Medieval Society*, draws upon skeletal and archival evidence to build a picture of trauma as part of the literary and historical lives of individuals and communities in the Middle Ages.

Now in its 11th successful edition, *Physical Anthropology* continues to help students examine the dynamic relationship between humans and their environment. The plethora of new fossil finds and analyses in the field since the last edition are all reflected throughout this full color text. Students will come away with the skills needed to recognize illogical or factually incorrect statements made in the name of evolutionary theory in the popular media.

The big picture of physical anthropology.

The sixth edition of the foundational reference on cognitive neuroscience, with entirely new material that covers the latest research, experimental approaches, and measurement methodologies. Each edition of this classic reference has proved to be a benchmark in the developing field of cognitive neuroscience. The sixth edition of *The Cognitive Neurosciences* continues to chart new directions in the study of the biological underpinnings of complex cognition—the relationship between the structural and physiological mechanisms of the nervous system and the psychological reality of the mind. It offers entirely new material, reflecting recent advances in the field, covering the latest research, experimental approaches, and measurement methodologies. This sixth edition treats such foundational topics as memory, attention, and language, as well as other areas, including computational models of cognition, reward and decision making, social neuroscience, scientific ethics, and methods advances. Over the last twenty-five years, the cognitive neurosciences have seen the

development of sophisticated tools and methods, including computational approaches that generate enormous data sets. This volume deploys these exciting new instruments but also emphasizes the value of theory, behavior, observation, and other time-tested scientific habits. Section editors Sarah-Jayne Blakemore and Ulman Lindenberger, Kalanit Grill-Spector and Maria Chait, Tomás Ryan and Charan Ranganath, Sabine Kastner and Steven Luck, Stanislas Dehaene and Josh McDermott, Rich Ivry and John Krakauer, Daphna Shohamy and Wolfram Schultz, Danielle Bassett and Nikolaus Kriegeskorte, Marina Bedny and Alfonso Caramazza, Liina Pylkkänen and Karen Emmorey, Mauricio Delgado and Elizabeth Phelps, Anjan Chatterjee and Adina Roskies

In *The Alternative Introduction to Biological Anthropology, Second Edition*, author Jonathan Marks presents an innovative framework for thinking about the major issues in the field with fourteen original essays designed to correlate to the core chapters in standard textbooks. Each chapter draws on and complements--but does not reconstitute (except for the sake of clarity)--the major data and ideas presented in standard texts. Marks explores such topics as how we make sense of data about our origins, where our modern ideas come from, our inability to separate natural facts from cultural facts and values as we try to understand ourselves, and the social and political aspects of science as a culturally situated mental activity.

This supplementary reader offers both historical and contemporary articles that demonstrate the nature of biological anthropology. With nearly one-third of the selections focusing on living populations, the 43 readings cover the entire range of bioanthropological studies: evolution, nonhuman primates, human paleontology, and modern human groups. Twelve of the 43 articles are new to this edition, including Kari Bruwelheide and Douglas Owsley's "Written in Bone: Reading the Remains of the 17th Century"; Carl Zimmer's "What is a Species?"; Daniel E. Lieberman's "Homing In On Early Homo"; and Sally Lehrman's "Going Beyond X and Y."

“Even the most useful reference guides are not always, well, shall we say, riveting. A refreshing exception is the new Broadview Guide to Writing, which is smart, helpful, and even fun to read.” —Gerald Graff and Cathy Birkenstein, authors of *They Say / I Say: The Moves That Matter in Academic Writing* Key Features —A coil-bound reference text suitable for a range of introductory composition and writing courses —Divided into three sections: Writing Processes (including Research, Argumentation, and Style) Writing Mechanics (Grammar, Usage, and Punctuation) Writing Contexts (Writing in different academic disciplines, Forms and conventions, and citation) —Comprehensive treatment of citation style guides, with 2016 MLA style updates —Expanded treatment of research methods, argument structures, and writing in the workplace —A unique section on “How to Be Good With Words”—issues of gender, race, class, religion, sexual orientation, disability, etc. —Expanded coverage for those whose native language is not English —All-new chapter on reading images —Extensive companion website featuring interactive exercises

Increasingly, writing handbooks are seen as over-produced and overpriced. One stands out: *The Broadview Guide to Writing* is published in an elegant but simple format, and sells for roughly half the price of its fancier-looking competitors. That does not change with the new edition; what does change and stay up-to-date is the content of the book. The sixth edition brings a substantial re-organization of the contents under three headings: Writing Processes, Writing Mechanics, and Writing Contexts. Coverage of APA, Chicago, and CSE styles of documentation has been substantially expanded, and the MLA section has now been fully revised to take into account all the 2016 changes. Also expanded is coverage of academic argument; of writing and critical thinking; of writing about literature, of paragraphing; of how to integrate quoted material into one’s own work; of balance and parallelism; and of issues of gender, race, religion etc. in writing. The chapter “Seeing and Meaning: Reading (and Writing About) Visual Images” is entirely new to the sixth edition.

The scope of this book is wide-ranging and includes methods of searching for and locating buried remains, their practical recovery, the decay of human and associated death scene materials, the analysis and identification.

For undergraduate introductory physical anthropology, biological anthropology or human origins courses. *Biological Anthropology, 2/e* continues to build upon the strength and success of the first edition by integrating the foundations and the most current innovations in the field from the ground up. Over the past twenty years, this field has rapidly evolved from the study of physical anthropology into biological anthropology, incorporating the evolutionary biology of humankind based on information from the fossil record and the human skeleton, genetics of individuals and of populations, our primate relatives, human adaptation, and human behavior. The second edition of *Biological Anthropology* combines the

most up-to-date, comprehensive coverage of the foundations of the field with modern innovations and discoveries. Concise, well-balanced, and comprehensive, *ESSENTIALS OF PHYSICAL ANTHROPOLOGY*, 10th Edition, introduces you to physical anthropology with the goal of helping you understand why it is important to know about human evolution. You'll learn how humans are biologically connected to all other life, including our ancient ancestors and our contemporary primate cousins, and how closely modern human populations are related to each other. Numerous high-quality visual diagrams, artwork, maps, photographs, and other learning tools will help you grasp the big picture of human evolution. For over twenty years, *A History of Anthropological Theory* has provided a strong foundation for understanding anthropological thinking, tracing how the discipline has evolved from its origins to the present day. The sixth edition of this important text offers substantial updates throughout, including more balanced coverage of the four fields of anthropology, an entirely new section on the Anthropocene, and significantly revised discussions of public anthropology, gender and sexuality, and race and ethnicity. Written in accessible prose and enhanced with illustrations, key terms, and study questions in each section, this text remains essential reading for those interested in studying the history of anthropology. On its own or used with the companion volume, *Readings for a History of Anthropological Theory*, sixth edition, this text provides comprehensive coverage in a flexible and easy-to-use format for teaching in the anthropology classroom.

Hayes' *Principles and Methods of Toxicology* has long been established as a reliable reference to the concepts, methodologies, and assessments integral to toxicology. The new sixth edition has been revised and updated while maintaining the same high standards that have made this volume a benchmark resource in the field. With new authors and new chapters that address the advances and developments since the fifth edition, the book presents everything toxicologists and students need to know to understand hazards and mechanisms of toxicity, enabling them to better assess risk. The book begins with the four basic principles of toxicology—dose matters, people differ, everything transforms, and timing is crucial. The contributors discuss various agents of toxicity, including foodborne, solvents, crop protection chemicals, radiation, and plant and animal toxins. They examine various methods for defining and measuring toxicity in a host of areas, including genetics, carcinogenicity, toxicity in major body systems, and the environment. This new edition contains an expanded glossary reflecting significant changes in the field. New topics in this edition include: The importance of dose–response Systems toxicology Food safety The humane use and care of animals Neurotoxicology The comprehensive coverage and clear writing style make this volume an invaluable text for students

and a one-stop reference for professionals.

Histories of American Physical Anthropology in the Twentieth Century chronicles the history of physical anthropology_or, as it is now known, biological anthropology_from its professional origins in the late 1800 up to its modern transformation in the late 1900s. In this edited volume, 13 contributors trace the development of people, ideas, traditions, and organizations that contributed to the advancement of this branch of anthropology that focuses today on human variation and human evolution.

This text introduces physical anthropology, the science of human biological evolution and variation. Divided into four parts, it addresses the major questions that concern biological anthropologists--"What are humans?" "Where are our origins?" "How did we evolve, and are we still evolving?" and "What does the future hold for the human species?--with an emphasis on hypothesis testing and the relationship between biology and culture.

"Live with Merlin and ride on the Dragons breath! Excalibur awaits you! With Full Circle as a guide, we, as humans and individuals, can realize our dreams by allowing magick to be part of us. Aaron hints at some of the early beginning days of spirituality and gives us some history of mystics within society, yesterday and today. The study of forensic evidence using archaeology is a new discipline which has rapidly gained importance, not only in archaeological studies but also in the investigation of real crimes. Archaeological evidence is increasingly presented in criminal cases and has helped to secure a number of convictions. Studies in Crime surveys methods of searching for and locating buried remains, their practical recovery, the decay of human and associated death scene materials, the analysis and identification of human remains including the use of DNA, and dating the time of death. The book contains essential information for forensic

scientists, archaeologists, police officers, police surgeons, pathologists and lawyers. Studies in Crime will also be of interest to members of the public interested in the investigation of death by unnatural causes, both ancient and modern.

An Indispensable Resource on Advanced Methods of Analysis of Human Skeletal and Dental Remains in Archaeological and Forensic Contexts Now in its third edition, *Biological Anthropology of the Human Skeleton* has become a key reference for bioarchaeologists, human osteologists, and paleopathologists throughout the world. It builds upon basic skills to provide the foundation for advanced scientific analyses of human skeletal remains in cultural, archaeological, and theoretical contexts. This new edition features updated coverage of topics including histomorphometry, dental morphology, stable isotope methods, and ancient DNA, as well as a number of new chapters on paleopathology. It also covers bioarchaeological ethics, taphonomy and the nature of archaeological assemblages, biomechanical analyses of archaeological human skeletons, and more. Fully updated and revised with new material written by leading researchers in the field Includes many case studies to demonstrate application of methods of analysis Offers valuable information on contexts, methods, applications, promises, and pitfalls Covering the latest advanced methods and techniques for analyzing skeletal and dental remains from archaeological discoveries, *Biological Anthropology of the Human Skeleton* is a trusted text for advanced undergraduates, graduate students, and professionals in human osteology, bioarchaeology, and paleopathology.

Understanding the chimpanzee mind is akin to opening a window onto human consciousness. Many of our complex cognitive processes have origins that can be seen in the way that chimpanzees think, learn, and behave. *The Mind of the Chimpanzee* brings together scores of prominent scientists from around the world to share the most recent research into what goes on inside the mind of our closest living relative. Intertwining a range of topics—including imitation, tool use, face recognition, culture, cooperation, and reconciliation—with critical commentaries on conservation and welfare, the collection aims to understand how chimpanzees learn, think, and feel, so that researchers can not only gain insight into the origins of human cognition, but also crystallize collective efforts to protect wild chimpanzee populations and ensure appropriate care in captive settings. With a breadth of material on cognition and culture from the lab and the field, *The Mind of the Chimpanzee* is a first-rate synthesis of contemporary studies of these fascinating mammals that will appeal to all those interested in animal minds and what we can learn from them.

Darwinism, Democracy, and Race examines the development and defence of an argument that arose at the boundary between anthropology and evolutionary biology in twentieth-century America. In its fully articulated form, this argument simultaneously discredited scientific racism and defended free human agency in Darwinian terms. The volume is timely because it gives readers a key to assessing contemporary debates about the biology of race. By working across disciplinary lines, the book's focal figures--the anthropologist Franz Boas, the cultural anthropologist Alfred Kroeber, the geneticist Theodosius Dobzhansky, and the physical anthropologist Sherwood Washburn--found increasingly persuasive ways of cutting between genetic determinist and social constructionist views of race by grounding Boas's racially egalitarian, culturally relativistic, and democratically pluralistic

ethic in a distinctive version of the genetic theory of natural selection. Collaborators in making and defending this argument included Ashley Montagu, Stephen Jay Gould, and Richard Lewontin. Darwinism, Democracy, and Race will appeal to advanced undergraduates, graduate students, and academics interested in subjects including Philosophy, Critical Race Theory, Sociology of Race, History of Biology and Anthropology, and Rhetoric of Science.

"It is George Stocking, more than anyone else, who has made the history of anthropology available to us."--Daniel A. Segal, American Anthropologist
