Pearson Edexcel A-level Biology (Salters-Nuffield)
Student Guide: Practical Biology Hachette UK

Persistent resistance to the teaching of evolution has so drastically impacted science curricula that many students finish school without a basic understanding of a theory that is a fundamental component of scientific literacy. This «evolution/creationism controversy» has crippled biological education in the United States and has begun to spread to other parts of the world. This book takes an educational point of view that respects both the teaching of evolution and religious beliefs. Authors from different academic traditions contribute to a collection of perspectives that begin to dismantle the notion that religion and science are necessarily incompatible. Making the right choice of A levels is crucial. Not only will it affect your enjoyment of studying over the next two years but it also has implications for your choice of career, further training or higher education options. The tenth edition of this student-friendly guide has been revised and updated and includes study and employment options after 16 as well as at degree level. It also contains information on apprenticeships, an increasingly popular alternative to full-time higher education. Each subject entry covers: What and how you study Which A levels fit well together for competitive courses and careers Related higher education courses Career and training options after A levels and degree courses

Written by highly respected authors, this engaging student's book offers motivating and relevant content in A2 advanced biology to improve exam performance and ensure students fulfil their full potential.

The Committee's report examines science and mathematics teaching in secondary schools in England, focusing on the following issues: the take-up of science and mathematics at GCSE and A-level, the provision of careers advice to students, problems in the recruitment and retention of teachers, the quality of teaching methods and the role of continuing professional development. The Committee finds that effective science teaching in schools is essential, both in order to ensure a satisfactory general level of scientific literacy in society, and to enable the next generation of scientists and engineers to progress into higher education and beyond. It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age, and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma-based system for 14-19 year old students

practical work, the role of language, of technology and formative and summative assessment - are relevant and pertinent to science teachers' work in all school systems." Professor David F Treagust, Curtin University of Technology, Australia This new edition of Good Practice in Science Teaching offers a comprehensive overview of the major areas of research and scholarship in science education. Each chapter summarizes the research work and evidence in the field, and discusses its significance, reliability and implications for the practice of science teaching. Thoroughly revised throughout, the new edition includes: Three new chapters covering: the learning of science in informal contexts; teacher professional development; and technology-mediated learning Updates to every chapter, reflecting the changes and developments in science education Further reading sections at the end of each chapter Each chapter has been written by science education researchers with national or international reputations. Each topic is approached in a straight-forward manner and is written in a concise and readable style. This invaluable guide is ideal for science teachers of children of all ages, and others who work in teaching and related fields. It is an essential text for teachers in training and those studying for higher degrees. Contributors: Philip Adey, Paul Black, Maria Evagorou, John Gilbert, Melissa Glackin, Christine Harrison, Jill Hohenstein, Heather King, Alex Manning, Robin Millar, Natasha Serret, Shirley Simon, Julian Swain, Mary Webb.
