Loneragan's analyses allow us to say exactly what "spiritual" means, and it need have nothing to do with God. "This book makes a seminal contribution to the psychology of religion and is on the cutting edge of the growing interest in the spiritual dimensions of human beings. Daniel Helminiak writes knowledgeably about neurobiology, psychotherapy, philosophy, and even psychedelic experience. His chapter on the 'God' concept is a tour de force and worth the price of the entire book. Once I started this book, I could barely put it down." — Stanley Krippner, Saybrook University "This is an amazing book. It is both lucid and brilliant. Deeply informed by Bernard Lonergan's systematic treatment of human knowing as a composite of experience, understanding, and judgment, Daniel Helminiak masterfully places study of spirituality within the self-transcending dimension of the human mind and in so doing differentiates and interrelates neuroscience, psychology, spirituality, and theology." — Ralph W. Hood, University of Tennessee at Chattanooga "In this book, magnificently and comprehensively Helminiak struggles toward an integrated perspective on the unfolding of the universe. Focused on humanity, his topic is actually the origins and dynamics of human yearning. As best he can, he meets contemporary theorists on their own ground and repeatedly nudges their thinking toward a more coherent position. The result cuts both ways. It challenges students of Lonergan who underappreciate natural and social processes, and it challenges natural and social scientists who seek a science of mind while subtly sidestepping their inquiring selves. Yet Helminiak

The Routledge Handbook of Visual Impairment examines current debates as well as cross-examining traditionally held beliefs around visual impairment. It provides a bridge between medical practice and social and cultural research drawing on authentic investigations. It is the intention of this Handbook to provide an opportunity to engage with academic researchers who wish to ensure a coherent and rigorous approach to research construction and reflection on visual impairment that is in collaboration with, but sometimes is beyond, the medical realm. This Handbook is divided into ten thematic areas in order to represent the wide range of debates and concepts within visual impairment. The ten themes include: cerebral visual impairment; education; sport and physical exercise; assistive technology; understanding the cultural aesthetics; socio-emotional and sexual aspects of visual impairment; orientation, mobility, habitation, and
