Biotechnology is considered as a key technology of the 21st century with the potential to offer technological solutions for global health and resource-based problems. Oliver Uecke analyses how early stages of the innovation process in biotechnology can be effectively managed, with the aim to transfer an innovation from academia to industry. A mixed method approach is applied with a multiple case study approach to identify characteristics for effective management and with the method of discrete choice experiments/best-worst scaling to estimate the importance of these characteristics. This study adds to existing research by identifying a group of five important characteristics that should be considered in the early stages of the innovation process, compared to a group of four characteristics that are less important. The results have implications for policy, directors and the management of research institutes and universities, entrepreneurs, TTO manager and other stakeholders involved in technology transfer.

He also worked in various capacities such as Dean Research, Dean, Faculty of Life Sciences, Dean of Colleges, Dean Student's Welfare and Chairperson, Department of Biotechnology in the same university. He received postdoctoral BOYSCAST fellowship and DBT Overseas Associateship from the Ministry of Science & Technology, Government of India for carrying out research at FRS Marine Laboratory, Aberdeen, UK. His research interests include the development of molecular diagnostic methods for bacterial and viral diseases. He published more than 70 research papers in journals of national and international repute, authored more than 06 books and supervised M.Phil and Ph.D research work of 14 students. He is active member of various international scientific organizations and societies including Association Microbiologist of India. The present book has been designed to serve the students of Plant Breeding, Genetics, Biotechnology, Biochemistry and Forestry. In most of the books, the objective type questions judge the students on the basis of their ability to memorize, because of the way they are formulated. It is important to be able to

remember the year of historical events, the scientists involved and who named what to make one remember the landmark contributions of the people on a particular subject. Along with these kinds of questions, majority of the questions in this book have been designed to assess the candidate's understanding of the subject. It is perhaps for the first time where questions have four to six choice statements, which are to be understood to find the right answer. One has to think and remember what he has learnt to be able to answer these questions. There are some books on objective type questions on the subject of Plant Breeding and a very few on Genetics but there is hardly any book, which deals with Tissue Culture, Biotechnology, Biochemistry or Forestry. All these subjects are related as many postgraduate students of Genetics and Plant Breeding take Biotechnology as a minor subject whereas those of Biotechnology take Biochemistry or Genetics and Plant Breeding as a minor subject. Also, undergraduates in agricultural universities study courses on all these subjects including Forestry

This self-teaching guide explains the basic concepts and fundamentals in all the major subtopics of biotechnology. The content advances logically from the basics of molecular and cellular biology to more complex topics such as DNA, reproductive cloning, experimental procedures, infectious diseases, immunology, the Human Genome Project, new drug discoveries, and genetic disorders.
