This book is an introductory text on building measurement and estimating for simple buildings in Hong Kong, based on the Hong Kong Standard Method of Measurement of Building Works 4th Edition Revised 2018 (HKSMM4 Rev 2018). It provides a toolkit for students and surveying technicians who are new to the subject. This second edition updates the contents in line with the HKSMM4 Rev 2018 and incorporates the latest industry developments such as BIM. The main text is divided into five parts following the development of a typical project. Part 1, Building the project team, introduces the team setup for a typical project. Part 2, Deciding the procurement strategy, explains the various procurement decisions to be made by an employer before any cost estimating and measurement work takes place. Part 3, Preparing for tender, covers the tendering methods, tender documentation and approximate estimating techniques used by Quantity Surveyors. Part 4, Measuring quantities, introduces measurement principles and HKSMM4 Rev 2018, followed by a detailed review of the measurement methods for each major trade, with worked examples. Part 5, Estimating unit rates, explores the basic techniques for unit rate preparation. The book contains worked examples from real Hong Kong building projects, self-assessment questions, reminders and points of note. The past decade has seen dramatic changes in the construction industry and the quantity surveying profession. The Latham and Egan reports and a client-led crusade for value for money is driving Quantity Surveyors to adopt these changes. In addition, the industry and the profession now stands on the threshold of the e-commerce revolution - one which has so far failed to penetrate the working practices of the majority of surveyors, particularly SMEs. Duncan Cartlidge addresses the evolving market in which today's Quantity Surveyors work, examining the new construction culture, new procurement strategies, e-practice and the QS, changing markets, delivering added value, supply chain management and partnering. The book is recommended reading for students of quantity surveying and an essential guide for all surveying professionals seeking to familiarise themselves with the latest developments.

Offers quantity surveyors, engineers, building surveyors and contractors clear guidance on how to recognise and avoid measurement risk. The book recognises the interrelationship of measurement with complex contractual issues; emphasises the role of measurement in the entirety of the contracting process; and helps to widen the accessibility of measurement beyond the province of the professional quantity surveyor. For the busy practitioner, the book includes: Detailed coverage of NRM1 and NRM2, CESMM4, Manual of Contract Documents for Highway Works and POM(I) Comparison of NRM2 with SMM7 Detailed analysis of changes from CESMM3 to CESMM4 Coverage of the measurement implications of major main and sub-contract conditions (JCT, NEC3, Infrastructure Conditions and FIDIC) Definitions of 5D BIM and exploration of BIM measurement protocols Considerations of the measurement risk implications of both formal and informal tender documentation and common methods of procurement An identification of pre- and post-contract measurement risk issues Coverage of measurement risk in claims and final accounts Detailed worked examples and explanations of computer-based measurement using a variety of industry-standard software packages.

Using a combination of worked examples and case studies, this book examines how projects go over-cost, what lessons can be learned from past examples and what approaches have successfully been employed. Example case studies include: The Scottish Parliament Wembley Stadium Heathrow Terminal 5. If you're studying Surveying or Construction Management, or starting out as a Construction Cost Manager and need to plan or assess construction projects then this is the book for you.

This authoritative text provides a detailed insight into how construction companies manage their finances at both corporate and project level. It will guide students and practitioners through the complexities of the financial reporting of construction projects within the constraints of accepted accounting practice. The book is written for non-accountants and from a contractor's perspective and is equally relevant to subcontractors and main contractors. The authors examine the relationship between the external annual accounts and the internal cost-value reconciliation process. CVR is covered in depth and the authors consider issues such as interim payments, subcontract accounts, contractual claims, final accounts, cash flow management and the reporting of the physical and financial progress of contracts. A broad perspective of all the financial aspects of contracting is taken along with related legal issues and the authors explain how things operate in the 'real world'. They describe good practice in

financial control while at the same time being honest about some of the more questionable practices that can - and do - happen. The approach taken is unique as the financial management of construction projects is considered from the perspective of the contractor's quantity surveyor. The book deals with the real issues that surveyors have to address when using their judgment to report turnover, profitability, cash flow, and work in progress on projects and the financial problems faced by subcontractors are frankly and pragmatically explored. The payment and notice requirements of the Construction Act are explained in detail and relevant provisions of JCT2011, NEC3, ICC, DOM/1 and other standard contracts and subcontracts are also covered. Financial Management in Construction Contracting addresses the wide variety of external factors that influence how construction companies operate, including government policy, banking covenants and the financial aspects of supply chain management. Cost reporting systems are described and real-life examples are used to illustrate cost reports, accrual systems and how computerised systems can be employed to provide the QS with information that can be audited. Examples drawn from practice demonstrate how work-in-progress (WIP) is reported in contracting. Cost value reconciliation reports are featured and the book demonstrates how adjustments are made for overmeasure, undermeasure, subcontract liabilities and WIP as well as explaining the processes that contractors use when analysing external valuations. This is the ideal core text for final year degree and post-graduate level modules on Quantity Surveying, Commercial Management, Construction Management and Project Management courses and will provide an invaluable source of reference for quantity surveyors and others who may be engaged in the financial management of construction projects. The book's companion website at <http://www.wiley.com/go/xxxx> [www.wiley.com/go/rossfinancialmanagement/a](http://www.wiley.com/go/rossfinancialmanagement/a) offers invaluable resources for students and lecturers as well as for practising construction managers: end-of-chapter exercises + outline answers PowerPoint slides for each chapter ideas for discussion topics links to useful websites

The book shall be of immense use for young Engineers who may wish to have interesting and rewarding careers as Cost Engineer, Quantity Surveyor, Technical Auditor in the Construction Industry. It is mostly directed at Engineering professionals, can also be useful to have insight of the construction industry for small and medium size Contractors and individual clients who intend to build up their own villas. I also feel that it would be of immense help to young Engineers who seek careers in the construction industry, particularly in China, India, Middle East where Cost Engineering has not developed like say countries such as United Kingdom & Australia where many universities offer degree Courses in Quantity Surveying and related fields. There is another professional case to publish this book. The Author has to make explanation/substantiations for two issues given below. a) Once the Author made a presentation on the topic "Construction as an Option to international Investors (published in Building Economics-AIQS Dec.2011) and made a statement that in such cases the Quantity Surveyors can work as advisors to them and earn in excess of US \$ 100,000/= a week. Some Quantity Surveyors were sceptical or couldn't comprehend and it became a joke to them. The chapter on Tender Adjudication and Post-Tender negotiations answers this. b) The author made another point that if someone could do Technical Auditing of a big project that would be enough for his entire life and quoted a Lawyer in Sri Lanka in the 1960's who did only one case in his whole career. He earned so much that he never sited the Courts for rest of his life. Again, some people were sceptical, couldn't comprehend. The case studies given under Construction Frauds shall give an indication regarding the possibilities of the amount of savings in Technical Auditing.

The book is essential reading for all Quantity Surveying students, engineers, and professionals. The book champions the adaptability and flexibility of the quantity surveyor, whilst covering the hot topics: .WHAT IS AN ESTIMATE ? .WHAT AN ESTIMATION MUST SHOW ? .WHY YOU NEED AN ESTIMATE ?

This book gathers papers from the 11th Construction Industry Development Board (CIDB) Postgraduate Research Conference, held on 28–30 July 2019 in Johannesburg, South Africa. The conference provided an essential forum for reviewing and generating knowledge on Construction 4.0 and, consequently, highlighted processes and practices that allow us to deliver and operate built environment assets more effectively and efficiently by focusing on physical-to-digital and digital-to-physical transformation. The event addressed three broad themes: Industrial production (prefabrication, 3-D printing and assembly, offsite and advanced manufacturing); Cyber-physical systems (actuators, sensors, IoT, robots and cobots for repetitive and dangerous tasks, and drones for mapping, progress monitoring, safety and quality inspections, lifting, moving and positioning); and Technologies (digital ecosystems, digital platforms, BIM, video and laser scanning, AI and cloud computing, big data and data analytics, reality capture, blockchain, simulation, virtual and augmented reality, data standards and interoperability, and vertical and horizontal integration). Given its scope, the book will be of interest to all construction industry and architectural professionals who want to learn about cutting-edge technologies applied to construction

This new edition of the classic quantity surveying textbook retains its basic structure but has been thoroughly updated to reflect recent changes in the industry, especially in procurement. Although over the last 20 years a number of new procurement methods have evolved and become adopted, the recession has seen many clients revert to established traditional methods of procurement so the fundamentals of cost planning still apply – and should not be ignored. The first edition of this leading textbook was published in 1964 and it continues to provide a comprehensive introduction to the practice and procedures of cost planning in the procurement of buildings. This 9th edition has been thoroughly updated to reflect changes that have occurred in the UK construction industry in the past six years. Whilst retaining its core structure of the three-phase cost planning process originally developed by Ferry and Brandon, the text provides a thorough grounding in contemporary issues including procurement innovation, whole life cycle costing and modelling techniques. Designed to support the core cost planning studies covered by students reading for degrees in quantity surveying and construction management, it provides a platform for understanding the fundamental importance of effective cost planning practice. The principals of elemental cost planning are covered from both pre- and post- contract perspectives; the role of effective briefing and client/stakeholder engagement as best practice is also reinforced in this text. This new edition: Addresses The Soft Landings Framework (a new govt. initiative, especially for schools) to make buildings perform radically better and much more sustainably. Puts focus on actual performance in use at brief stage, during design and construction, and especially before and after handover. Covers recent changes in procurement, especially under the NEC and PFI Provides more on PPP and long-term maintenance issues Offers an improved companion website with tutorial worksheets for lecturers and Interactive spreadsheets for students, e.g. development appraisal models; lifecycle costing models A practical guide to quantity surveying from a main contractor's perspective. It covers measurement methodology (including samples using NRM2 as a guide), highlights the complex aspects of a contractor's business, reviews the commercial and contractual management of a construction project, and provides detailed and practical information on running a project from commencement through to completion.

Developed by the faculty of University of Florida Construction Department & used as an introductory estimating course in conjunction with Walker's Building Estimator's Reference Book, this text guides the reader through a proven method of quantity surveying & estimating. This standardized method allows several estimators to work on the same project without confusion or loss of time & lets one estimator take over an unfinished estimate & understand what has been completed. The text reviews construction contracts, insurance & bonds. It discusses geometric shapes & conversion factors, & valuable tables aid the user in determining material quantities. It explains preparation of plans for survey, how to read plans & locate sections, & how to convert inches to decimals of a foot. It provides the reader with a method of estimating quantities & costs of concrete, formwork, reinforcing steel, masonry, earthwork, & carpentry. For residential construction.

Willis's Elements of Quantity Surveying has become a standard text in the teaching of building measurement – a core part of the degree curriculum for quantity surveyors. The book will be fully updated to follow the guidance given by RICS NRM 1 & 2. As in previous editions the focus remains a logical approach the detailed measurement of building elements and copious use of examples to guide the student. The text has been fully revised in line with the NRM guidance and includes many new and revised examples illustrating the use of NRM. The hallmarks of previous editions – clarity and practicality – are maintained, while ensuring the book is fully up to date, providing the student of quantity surveying with a first class introduction to the measurement of building elements.

The world of construction is intrinsically linked with that of finance, from the procurement and tendering stage of projects right through to valuation of buildings. In addition to this, things like administrations, liquidations, mergers, take-overs, buy-outs and floatations affect construction firms as they do all other companies. This book is a rare explanation of common construction management activities from a financial point of view. While the practical side of the industry is illustrated here with case studies, the authors also take the time to build up an understanding of balance sheets and P&L accounts before explaining how common tasks like estimating or valuation work from this perspective. Readers of this book will not only learn how to carry out the tasks of a construction cost manager, quantity surveyor or estimator, they will also understand the financial logic behind them, and the motivations that drive senior management. This is an essential book for students of quantity surveying or construction management, and all ambitious practitioners.

This book covers the whole range of skills and knowledge that modern quantity surveyors require to perform their work efficiently and effectively.
