Chemistry and Physics, always two closely related sciences, have been brought into more intimate relations by recent developments in research and our increasing understanding of matter and energy. One of the goals of the editor and the publisher is to provide a reference book which will assist in providing certain information to further this understanding. The editor attempts to include material which has a high probability to find extended use in many branches of chemistry and physics and the closely allied sciences. This 1st Student Edition provides certain core data and information that are constant or which change only slightly over an extended period of time.

Lees' Loss Prevention in the Process Industries Hazard Identification, Assessment and Control Butterworth-Heinemann Report for 1879/1880 includes information on state railways from their beginning.

Safety in the process industries is critical for those who work with chemicals and hazardous substances or processes. The field of loss prevention is, and continues to be, of supreme importance to countless companies, municipalities and governments around the world, and Lees' is a detailed reference to defending against hazards. Recognized as the standard work for chemical and process engineering safety professionals, it provides the most complete collection of information on the theory, practice, design elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books (and cross-referencing systems) would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all-encompassing three volume reference instead. The process safety encyclopedia, trusted worldwide for over 30 years Now available in print and online, to aid searchability and portability Over 3,600 print pages cover the full scope of process safety and loss prevention, compiling theory, practice, standards, legislation, case studies and lessons learned in one resource as opposed to multiple sources
