This important and original book places the case study in international business research in its historical context, critically evaluates current case study practices in the field and proposes a more pluralistic future for case research within international business and international management research. While the case study is the most popular qualitative research strategy in the field, only a narrow selection of possible approaches is currently used. IB and IM researchers typically rely on a case study approach that could be characterized as 'qualitative positivism'. The editors and contributors look beyond this disciplinary convention and encourage greater pluralism in IB and IM case research. Their key argument is that increased awareness of prevailing disciplinary conventions - and their limitations - increases the potential for methodological innovation and versatility in case research. The contributions provide critical, novel and innovative perspectives on the case study in IB and IM research. The book offers inspiration to case authors and an authoritative methodological reference for those publishing and reviewing case research. It will also be highly regarded by postgraduate and doctoral students in IB and IM as well as both qualitative and quantitative researchers in the field.

It examines the context in which multi-national companies operate and how the key players interact with each other and with the external business environment. It takes an issues based approach that explores contemporary issues that impact global business activity and examines the managerial responses to those issues. An excellent course text.
