This White Paper sets out clearly how the UK will continue to unlock and seize the benefits of data sharing in the future in a responsible way. Firstly by ensuring equality in access to data; secondly in building greater trust in public data; and thirdly by ensuring that public services are more personalised and efficient by being smarter with the data public bodies hold. The UK is currently co-chairing the Open Government Partnership of 55 governments whose theme is 'Transparency drives prosperity' with the belief that opening up data will empower citizens, foster innovation and reform public services. It is also, therefore, about how others participate. About businesses and organisations becoming more transparent themselves and pushing data into the public domain and individuals taking that data and using it to make better decisions or press for different types of services.

The World Summit on Sustainable Development in Johannesburg clearly identified the corporate sector as one of the key actors in the delivery of national and international poverty reduction targets in developing countries. "Partnerships" between government, civil society and business were proposed as one means whereby these poverty reduction targets were to be achieved. Despite the rhetoric, there was less consideration of how such partnerships could work in practice, the outcomes that could be achieved, or the relative merits of partnerships over other, more

traditional approaches to development. This book is about partnerships between the private sector, government and civil society. Its objective is to share practical experiences in establishing and implementing such partnerships and to show how partnerships work. The focus is on the oil, gas and mining industries, as these sectors have tended to be the primary drivers of foreign investment in developing countries. These corporations increasingly operate in regions characterised by poor communities and fragile environments. The more effective use of external relationships to ensure the effective contribution of these investments to poverty reduction and local environmental management is critical, for the companies, for government, and for the poor. Putting Partnerships to Work is based on the work of the Secretariat of the Natural Resources Cluster (NRC) of Business Partners for Development (BPD). This major research programme, which ran from 1998 to 2002, aimed to enhance the role of oil, gas and mining corporations in international development. The programme objective was to produce practical guidance, based on the experience of specific natural resource operations around the world, on how partnerships involving companies, government authorities and civil-society organisations can be an effective means of reducing investment risks and of promoting community and regional development. The programme encompassed partnerships in Colombia, Nigeria, India, Venezuela, Bolivia, Zambia, Azerbaijan, Indonesia and Tanzania. The specific projects that were implemented included not

only "traditional" development projects such as the provision of water, healthcare or infrastructure but also themes as diverse as conflict prevention, regional development, micro-enterprise development and managing oil spill compensation. Based on the experience of establishing and implementing effective partnerships, the NRC identified good practice, and developed replicable guidelines, tools and training materials. This book is not only about good practice; it presents both the positive outcomes and lessons from the programme, as well as the risks and costs, and where things went wrong. It also provides evidence not only of the viability of partnerships (i.e. that partnerships "can work") but also evidence that partnership approaches can provide substantially better outcomes for all parties than can more traditional approaches to development or corporate social responsibility. For example, a road in India was constructed at 25% of the cost to government; it took just 11 months for a community health centre in Venezuela to become operational and with its long-term financial future assured; and primary education enrolment rates in the vicinity of a gold mine in Tanzania have jumped from a historic level of 60–80% to almost 100% (as a consequence of improved infrastructure and community awareness of the importance of education). These development and public-sector benefits have been accompanied by substantial business benefits, including significant reductions in the cost of community development initiatives and/or the leverage of additional resources, greater sustainability and viability of

development projects and significant improvements to corporate reputation and their local "social licence to operate" with communities. The book argues that to achieve these benefits requires all parties to invest time and effort in first exploring the best design for the partnership, understanding the motivations of their potential partners and, once the partnership has been established, continuing to actively support the partnership and ensure its ongoing viability. Partnerships that engage the strengths of companies, government and civil society can, under the right conditions, yield better (and more sustainable) results for communities and for business than traditional approaches to development. The authors argue that, because it is built on the central idea of each partner "doing what they do best", the partnership approach offers an opportunity to rethink the way in which companies view their contributions to the livelihoods of local communities. Through partnerships it is possible that community development will be seen less as an "add-on" or "cost" to the company but more an integral part of business strategy providing significant commercial and other benefits. Perhaps most importantly, partnerships offer the potential for regional operating companies to change the perceptions of government and of civil society that the company will take the primary responsibility for local development. Rather, partnerships enable companies to locate themselves as one of (but not the only) agent of development in the local region. Partnerships enable communities to take charge of their own development needs, interacting with government to jointly design and

maintain public services. They also allow government to play its proper role of fulfilling its public mandate, delivering necessary services and ensuring the quality and sustainability of development impacts. The challenges of poverty reduction in the developing world are so great that no one sector can address them on its own. Partnerships between business, government and civil society are a means of addressing this most fundamental of truths. It is hoped that this book will provide a road map for all those working towards making the elimination of poverty a reality.

The international administration of troubled states - whether in Bosnia, Kosovo, or East Timor - has seen a return to the principle of trusteeship; that is when some form of international supervision is required in a particular territory in order both to maintain order and to foster the norms and practices of fair self-government. This innovative study rescues the normative discourse of trusteeship from the obscurity into which it has fallen since decolonization. It traces the development of trusteeship from its emergence out of debates concerning the misrule of the East India Company; its internationalization in imperial Africa; its institutionalization in the League of Nations mandates system, and, then, in the United Nations trusteeship system; and the destruction of its legitimacy by the ideas of self-determination and human equality. No other book brings this rich historical experience to bear on the dilemmas posed by the resurrection of trusteeship after the end of the Cold War. It is with a view to contemporary world problems that this book explores the

obligations that attach to preponderant power and the limits that should be observed in exercising that power for the sake of global good. The book concludes by arguing that trusteeship remains fundamentally at odds with the ideas of human dignity and equality.

complement of instructor and student support materials online, including test banks and grading through Canvas. Government Alone Can't Solve Society's Biggest Problems World hunger. Climate change. Crumbling infrastructure. It's clear that in today's era of fiscal constraints and political gridlock, we can no longer turn to government alone to tackle these and other towering social problems. What's required is a new, more collaborative and productive economic system. The Solution Revolution brings hope—revealing just such a burgeoning new economy where players from across the spectrum of business, government, philanthropy, and social enterprise converge to solve big problems and create public value. By erasing public-private sector boundaries, the solution economy is unlocking trillions of dollars in social benefit and commercial value. Where tough societal problems persist, new problem solvers are crowdfunding, ridesharing, app-developing, or impact-investing to design innovative new solutions for seemingly intractable problems. Providing low-cost health care, fighting poverty, creating renewable energy, and preventing obesity are just a few of the tough challenges that also represent tremendous opportunities for those at the vanguard of this movement. They create markets for social good and trade solutions instead of dollars to fill the gap between what government can provide and what citizens need. So what drives the solution economy? Who are these new players and how are their roles changing? How can we grow the movement? And how can we participate? Deloitte's William D. Eggers and Paul Macmillan answer these

Government cannot handle alone the huge challenges facing our global society—and it shouldn't. We need a different economic paradigm that can flexibly draw on resources, combine efforts, and create value, while improving the lives of citizens. The Solution Revolution shows the way.

Business and Society: Corporate Strategy, Public Policy and Ethics, by Post, Lawrence and Weber was the first book to be published in the field of business and society and is the market leader! For over thirty years, Business and Society has been updated and reinvented in response to society's relationship to business. Post, Lawrence and Weber discuss the social and ethical impacts of business. Business and Society, 10e highlights why government regulation is sometimes required as well as new models of business-community collaboration. Business and Society, 10e is a book with a point of view. Post, Lawrence and Weber believe that businesses have social (as well as economic) responsibilities to society; that business and government both have important roles to play in the modern economy; and that ethics and integrity are essential to personal fulfillment and to business success.

BUSINESS AND SOCIETY employs a stakeholder management framework. This framework emphasizes a business's social, legal, political, and ethical responsibilities to both external and internal groups that have a stake, or interest, in that business. It is a fundamental goal of the course that students really get that responsible business decision makers strive to balance and protect the interests of various stakeholders-investors, employees, community, environment, etc. An emphasis is also placed on the fact that one needs to understand that business situations will continually arise that will truly test ones values and ethics. BUSINESS AND SOCIETY not only exposes students to diverse and important stakeholder and ethical frameworks for considering and protecting stakeholder interests, through its use of cases and other real-world applications, this text enhances the precision with which students think about and practice ethical decision making. Opportunities to apply stakeholder and ethical systems to specific business problems abound, and questions are provided with all cases and applications to focus student reasoning, ensuring excellent preparation for class discussions.

Constructing roads in Madagascar; forestry along Canada's Pacific Coast; water and sanitation projects in South Africa; community banking in the United States; constructing a new global system for corporate reporting. These all have something in common. They provide great illustrations of the types of profound and wise changes needed in the way we run our affairs if we are to respond to the scale of environmental and social challenges and opportunities facing us. They are examples of "societal learning and change". Today, this phenomenon is occurring across industries as diverse as resources extraction, infrastructure development, agriculture and information technology at the local, national, regional and global levels. Its essence involves the ability to create rich relationships that bridge large differences. This book describes this phenomenon for practitioners to help them address issues and develop opportunities more

effectively. Building on the traditions of individual and organizational learning, this book suggests that our challenge is to create learning societies and processes. This involves both change in ourselves as individuals, but also change in the way the three key systems that make up our societies – the political system (government), economic system (business) and social system (civil society) – function by creating more robust interactions that respond to human and environmental imperatives rather than organizational ones. *Societal Learning and Change* presents a meta-framework that covers diverse approaches, including corporate citizenship, social responsibility, community development, private-public partnerships, inter-sectoral collaboration and sustainability strategies. It makes sense of all of these by emphasising that they all share the need to change relationships at the societal level and explaining how to do this from a systems perspective. The book helps overcome the conundrum where individual organisations are unsuccessfully trying to achieve big change with their stakeholders. Rather than stakeholder management with an organization-centric viewpoint, this book describes the importance of taking a stakeholder engagement and issue/opportunity-centric strategy. Wherever you are, you can make a contribution to shifting the paradigm through a societal learning and change strategy. The critical contribution is creating new relationships between people and organizations that traditionally would not interact but in fact have common interests. When these relationships become meaningful by addressing a problem or developing an opportunity, people begin to learn about each other and develop mutual appreciation and understanding. Often this process is complicated and confusing. People do not use words in the same way even if they speak the same formal language; they do not learn or perceive the world the same

way although they may share a common culture; their organizations have diverse goals, resources and weaknesses that make working together problematic. However, it is these very differences that are the source of the value of working together. Societal Learning and Change aims to make it easier to solve differences in order to work together successfully; it does this by identifying some of the differences as sources of tension and opportunity and describing the development processes of building relationships that can produce mutually rewarding innovation that is unimaginable when the relationship begins. This is an extremely optimistic book at a time of great pessimism about the huge forces of globalization and corporate power that seem to be overwhelming us. It will be essential reading for students and practitioners in the fields of organizational learning, sustainability, poverty, international development and stakeholder relations.

affects of marketing on consumer sovereignty, public health, economic growth, and other aspect of societal welfare. The large and growing amount of research has become fragmented and diverse. There is a need for a volume to pull all of this research together to facilitate the assessment of what we have learned and what we need to study further. This volume fills that need! Handbook of Marketing and Society presents the first comprehensive, in-depth examination of scholarly research on how marketing affects societal welfare. Drawing on the talents of a distinguished group of contributors, the editors have assembled key reviews, analyses, and perspectives on a broad range of research topics including deceptive advertising, warning labels, trademark infringement, antitrust enforcement, environmental labels, privacy protection, social marketing, and corporate societal marketing. An unifying model is presented in the introduction that illustrates the linkage of marketing knowledge, marketing decisions, and societal welfare. Each chapter covers, in a purposeful way, a different link or path through which marketing can affect societal welfare. Future research needs are identified in each chapter in order to help focus marketing thinking and marketing practice serve society more effectively. Academics, graduate students, and others interested in marketing's role in society will find this a valuable resource and an excellent guidebook for future research.

Most successful leaders know that leadership is an art, not a science. They recognize that beyond all the sophisticated systems and theories, the strategies and tactics, leadership is ultimately about intangible things such as timing, intuition, and passion. This book shows how successful leaders can master the artistic aspects of their work. It guides readers to the ways that the leadership can be practiced and learned. "The Dance of Leadership" explores the art of leadership by examining the perspectives, training, and insights of artists, most particularly in the fields of music and dance. The authors look at how these people learn their craft, practice their skills, and attain mastery of their art. Then they adapt these lessons from the arts to the experiences of successful leaders in all fields. This book incorporates in-depth interviews with some of the world's premier artists and writers, as well as dozens of leader business, government, the military, and sports. The result is a book that celebrates the art of leadership - but an art that can be learned, developed, and practiced.

The crisis in Asia has caused economic hardship and brought an end to the 'economic miracle' of fast economic growth in the region. This book asks whether the 1997/8 crisis marks a break with the past and signals an end to 'Asian' ways of running economies. 'Cronyism', or close connections between family, business, and government, was exposed when the stock markets and currencies dived. Pressure from overseas investors and international organizations has produced reforms in the region. The book examines the social, economic, and political modes of governance in the region. It finds that there is a shifting balance between rule by the market, rule by connections, and rule by force. In the sphere of economic management, it shows that the period of the 'developmental state' in Japan and Korea has come to an end, but that it has not yet been replaced by a liberal market. Elsewhere the close connections between governments and business have been weakened but not yet broken. There are still special 'Asian' characteristics in economic management and in politics. The forces of 'Globalization' are strong, but they are confronted with political and economic cultures that are not rooted in liberal market ethics. institutions, transforming social and civic practices and affecting democratic processes. This book questions what role online platforms play in the organization of Western societies. First, how do platform mechanisms work and to what effect are they deployed? Second, how can platforms incorporate public values and benefit the public good? The Platform Society analyzes intense struggles between competing ideological systems and contesting societal actors-market, government and civil society-raising the issue of who is or should be responsible for anchoring public values and the common good in a platform society. Public values include of course privacy, accuracy, safety, and security, but they also pertain to broader societal effects, such as fairness, accessibility, democratic control, and accountability. Such values are the very stakes in the struggle over the platformization of societies around the globe. The Platform Society highlights how this struggle plays out in four private and public sectors: news, urban transport, health, and education. Each struggle highlights local dimensions, for instance fights over regulation between individual platforms and city governments, but also addresses the level of the platform ecosystem as well as the geopolitical level where power clashes between global markets and (supra-)national governments take place.

As the world struggles to cope with the growing threat of a global carbon crisis, Doppelt has revised one of the best books ever written about change management, leadership and sustainability to focus on de-carbonisation. Doppelt's research, presented in this hugely readable book, demystify the sustainability-change process by providing a theoretical framework and a methodology that managers can use to successfully transform their organisations to embrace sustainable development. Filled with case examples, interviews and checklists on how to move corporate and governmental cultures toward sustainability, the book argues that the key factors that facilitate change appear in the successful efforts at companies such as AstraZeneca, Nike, Starbucks, IKEA, Chiquita, Interface, Swisscom and Norm Thompson and in governmental efforts such as those in the Netherlands and Santa Monica in California. For these and other cutting-edge organisations, leading change is a philosophy for success. *Leading Change toward Sustainability* has been used by change leaders around the world to guide their internal global warming and sustainability organisational change initiatives. This new edition is essential reading for leaders from all types of organisations.

This Code of Practice for Victims of Crime forms a key part of the wider Government strategy to transform the criminal justice system by putting victims first, making the system more responsive and easier to navigate. Victims of crime should be treated in a respectful, sensitive and professional manner without discrimination of any kind. They should receive appropriate support to help them, as far as possible, to cope and recover and be protected from re-victimisation. It is important that victims of crime know what information and support is available to them from reporting a crime onwards and who to request help from if they are not getting it. This Code sets out the services to be provided to victims of criminal conduct by criminal justice organisations in England and Wales. Criminal conduct is behaviour constituting a criminal offence under the National Crime Recording Standard. Service providers may provide support and services in line with this Code on a discretionary basis if the offence does not fall under the National Crime Recording Standard (NCRS) (see the glossary of key terms found at the end of this Code). Non-NCRS offences include drink driving and careless driving. This Code also sets a

_____ *A road-map for a kinder, fairer capitalism that is fit for the 21st century* Financial Times Book of the Month 'The founder of Richer Sounds is one of the finest entrepreneurs we have.' Archie Norman, chairman of Marks & Spencer _____

Capitalism has lost its way. Every week brings fresh news stories about businesses exploiting their staff, avoiding their taxes, and ripping off their customers. Every week, public anger at the system grows. Now, one of Britain's foremost entrepreneurs intervenes to make the case for putting business back firmly in the service of society, and setting out on a new path to a kinder, fairer form of capitalism. Drawing on four decades of hands-on management experience, the founder of Richer Sounds argues that ethically run businesses are invariably more efficient, more motivated and more innovative than those that care only about the bottom line. He uncovers the simple tools that the best leaders use to make their businesses fair, revealing how others can follow suit. And he also delves into the big questions that modern capitalism has to answer if it is to survive and to thrive.
