The Industrial Revolution favored the growth of supply, until its surplus with regards to demand led to the paradigm shift from focusing on the product (“a good product sells itself”), or production (“a cheap product sells itself”), to the emphasis on customer relationships (“understanding consumer needs through market research”). Therefore, economic and technological development facilitated the incorporation of the business research discipline into the process of decision making—in the beginning—and business intelligence processes—these days—in order to make well informed decisions at lower economic risks (Méndez del Río, 2006). Thus, this book provides managers and students alike, with a clear analysis of business research methods, combining the knowledge, understanding and skills necessary to complete a successful research project. Readers will learn from proven examples and case studies based on real life situations, which complement theoretical concepts and clearly illustrate how to do an appropriate market research. With each chapter, the reader is guided through all the stages of a market research process -from problem recognition to final report writing. This book offers both a deep understanding and at the same time permits judgment and analysis from a financial-audit perspective. It reviews and develops easy-to-follow theoretical and practical concepts in a simple, concise and clear structure that facilitate the application of business research methods to a wide variety of business sectors. While there are books focusing on parametric tests, the domain of nonparametric tests is mostly unexplored. *Data Analysis in Business Research: A Step by Step Nonparametric Approach* brings under one umbrella all the major nonparametric statistical tools that can be used by undergraduate and postgraduate students of all disciplines, especially students of Research Methods in Social Sciences and Management Studies, in their dissertation work. Students face difficulty in analyzing data collected from small samples; they end up reporting mere percentage analysis which results in the loss of information collected. Hence there is a need to create awareness among students and researchers about the application of major nonparametric tools that can be applied confidently without worrying about sample size, scale of measurement, normality assumptions or other parameters of that nature. The lucid presentation of the step-by-step procedures, explaining in simple English how to perform each of the major nonparametric tests, is a major attraction of the book. The book, which also has a comprehensive question bank, assumes minimal or little knowledge of statistics on the part of the reader. This book will also be informative for Marketing Research professionals and organisations, consultancies and organisations of economic research.

Classic graduate-level introduction to theory of computability. Discusses general theory of computability, computable functions, operations on computable functions, Turing machines self-applied, unsolvable decision problems, applications of general theory, mathematical logic, Kleene hierarchy, more.

Research Methodology remains a vital issue at the heart of all scholarly activity. Without a proper appreciation of Research Methodology and its correct application academic progress is not possible. One of the problems which Research Methodology offers the learner is the very wide range of options which are frequently available with which to answer a research question and this high level of choice can lead to indecision and sometimes confusion. This book is a compilation of a number of important papers on this subject selected by two leaders in this field of study. A wide range of topic have been chosen which lead the reader through some of the more important considerations in the field. The book is designed to help with this type of problem and the the current selection of papers which highlight a variety of research questions, problems and issues and an accompanying range of research methods and methodological discussions. Their authors have stated the research positions they have adopted and respective levels of justification and knowledge forms have been presented. These range from those forms of knowledge that might be found of use to practitioners to those that are more philosophically or academically inclined. A certain level of research impact is either implied or overtly presented in the selected papers.
