Dental Caries is a major new work on a subject of vital concern to all dentists. It builds on the work of two former books, Textbook of Clinical Cariology and Fluoride in Dentistry, to present a definitive resource on caries prevention and treatment. The management of dental caries is central to daily work in dental offices because caries is ubiquitous in all populations, lesion development continues lifelong and caries is the most common cause of tooth loss around the world. The book's logical structure consists of four parts, covering: The Disease; Diagnosis; Prevention, Non-Operative and Operative Treatment and Prognosis. It provides a clear

understanding of the disease process, be it at an individual or population level. The Editors are joined by 28 expert authors who have contributed a wealth of chapters, ranging from the role of fluorides to restoring the tooth. Careful balance between prophylaxis and surgical intervention guides the reader through the maze of treatment decisions, while the breadth of the book reflects diverse, and sometimes controversial, opinion on dental caries. Dental Caries is aimed at dental students and practitioners, and will be of value to dental hygienists and those involved with public health. Faculty and practice libraries will also wish to feature this authoritative book on their shelves. I am delighted to see the appearance of the first comprehensive atlas recognizing the important relationship between periodontal and systemic health and disease. The atlas is not

intended to cover the new areas of interest in relation to periodontal health and cardiac and other disease, but rather to demonstrate the systemic diseases that manifest to the periodontist and hygienist. The atlas thus covers a vast range of systemic disorders that may present with gingival or periodontal lesions and highlights the importance of the periodontal and oral medicine teams in diagnosing and managing patients with sometimes complex medical problems. The authors, Professor George Laskaris and Professor Crispian Scully, are both active clinicians, teachers and researchers in oral medicine, with wide experience and special interest in the oral medicine/periodontal interface and both have published widely in their fields. I welcome this contribution to the advancement of care for the patient with periodontal disease. Jan Lindhe Professor Emeritus of Periodontology University of Gothenburg, Sweden
