cover six broad topics that are relevant to identifying potential human behavioral universals. Family and social organization. Predation pressure is thought to be the main force favoring group-living in primates, but there is great diversity in the size and structure of social groups across the primate order. Research on the behavioral ecology of primates and other animals has revealed that the distribution of males and females in space and time can be explained by sex-specific adaptations that are sensitive to factors that limit their fitness: access to resources for females and access to potential mates for males.

Explains and describes the ways that language use in the legal system can create inequality and disadvantage. It examines the three main areas where the two intersect: the central issue of the language of the law; the disadvantage which language can impose before the law, and forensic linguistics - the use of linguistic evidence in legal processes. Each section of the book is preceded by an introduction by the editor which sets the paper within a conceptual framework. Lawyer's opinions are not neglected even though the collection is written mainly by linguists. The section concludes with a lawyer's response, in which a prominent lawyer with a particular interest in the content of the section responds to the papers.

variety of musculoskeletal skeletal problems. Numerous illustrations provide a better understanding of text content.

Normative texts are meant to be highly impersonal and decontextualised, yet at the same time they also deal with a range of human behaviour that is difficult to predict, which means they have to have a very high degree of determinacy on the one hand, and all-inclusiveness on the other. This poses a dilemma for the writer and interpreter of normative texts. The author of such texts must be determinate and vague at the same time, depending upon to what extent he or she can predict every conceivable contingency that may arise in the application of what he or she writes. The papers in this volume discuss important legal and linguistic aspects relating to the use of vagueness in legal drafting and demonstrate why such aspects are critical to our understanding of the way normative texts function.

Prepared in a readily accessible, amply illustrated format, this book is designed to equip practitioners with a detailed understanding of the underlying basis of the HVLA thrust technique and the best means to safely employ it in the effective management of a range of disorders of the spine and pelvic regions. The book is arranged in three sections to maximise understanding of what can be challenging areas to comprehend and effectively manage. Section One explores the biomechanics of movement and forces between adjacent vertebrae followed by a discussion of positioning and 'locking'. These chapters are then followed by a discussion about safety with particular reference to the management of the cervical spine. A chapter on evidence – and what represents good medical

What happens to traditional conceptions of heritage in the era of fluid media spaces? 'Heritage' usually involves intergenerational transmission of ideas,

customs, ancestral lands, and artefacts, and so serves to reproduce national communities over time. However, media industries have the power to transform national lands and histories into generic landscapes and ideas through digital reproductions or modifications, prompting renegotiations of belonging in new ways. Contemporary media allow digital environments to function as transnational classrooms, creating virtual spaces of debate for people with access to televised, cinematic and Internet ideas and networks. This book examines a range of popular cinematic interventions that are reshaping national and global heritage, across Europe, Asia, the Americas and Australasia. It examines collaborative or adversarial articulations of such enterprise (by artists, directors, producers but also local, national and transnational communities) that blend activism with commodification, presenting new cultural industries as fluid but significant agents in the production of new public spheres. Heritage in the Digital Era will appeal to students and scholars of sociology, film studies, tourist studies, globalization theory, social theory, social movements, human/cultural geography, and cultural studies.

In diesem praxisbezogenen Werk werden manipulative Techniken für die Wirbelsäule, den Thorax und das Becken auf anschauliche Art vorgestellt - nicht nur im Buch, sondern auch auf CD-ROM. Mit einem ausführlichen Abschnitt über die Grundlagen wie Biomechanik und Diagnostik schafft der Autor schrittweise Verständnis für die manipulativen HVLA (High Velocity-Low Amplitude)-Behandlungstechniken in der Osteopathie. Außerdem erhält der Leser eine Einführung in das wissenschaftliche Arbeiten und Bewerten seiner praktischen Tätigkeit. Den Schwerpunkt des Buches bilden die detaillierte und leicht nachvollziehbare Darstellung der einzelnen HVLA-Manipulationen der Wirbelsäule, des Brustkorbs und der Rippen sowie des Beckens. Besonders hilfreich ist die CD-ROM, auf der man alle Techniken als Videosequenzen mit entsprechender Erklärung finden kann, da es gerade bei den manipulativen Techniken an der Wirbelsäule auf die exakte Handstellung und Ausführung ankommt. Durch die Videos auf der CD-ROM kann der genaue Bewegungsablauf nachvollzogen und die Technik schnell und effektiv in die Praxis umgesetzt werden.
