"This book puts music, laughter, and heart front and center, and the results are magical." - Mark Hyman, M.D. In Dr. Steven Eisenberg's oncology practice, the enemy is cancer, but it's also denial, anger, and fear--draining emotions that can interfere with the effectiveness of treatment. Every day, Dr. Steven helps patients fight cancer using both time-tested conventional therapies and innovative medical technologies. At the same time, he helps them overcome negative emotions by cultivating acceptance, love, and self-compassion in a deeply personal way, through laughter, empathy, and the music he plays and sings for and with them. How often do you hear someone say, "I'm alive"? Dr. Steven's patients say it to him all the time, in conversations, texts, and e-mails. Some of these patients are celebrating remissions or cures. Some are getting sicker, with reservations about what tomorrow might bring. But they've had a good day. They are all--we are all--truly and urgently alive. Dr. Steven's book invites us to celebrate this truth, even as it tells a compelling story of a doctor's experience on the front lines of care; offers a road map for bringing humanity back into traditional medical practice; and gives patients, families, and caregivers a blueprint for living each day with hope.

One boy spends six hours a day washing himself—and still can't believe he will ever be clean. Another sufferer must check her stove hundreds of times daily to make sure she has turned it off. And one woman, in an effort to ensure that her eyebrows are symmetrical, finally plucks out every hair. All of these people are suffering from Obsessive-Compulsive Disorder (OCD), an emotionally crippling sickness that afflicts up to six million Americans. Cleaning, counting, washing, avoiding, checking—these are some of the pointless rituals that sufferers are powerless to stop. Now a distinguished psychiatrist and expert on OCD reveals exciting breakthroughs in diagnosis, successful new behaviorist therapies and drug treatments, as well as lists of resources and references. Drawing on the extraordinary experiences of her patients, Dr. Judith Rapoport unravels the mysteries surrounding this irrational disorder . . . and provides prescriptions for action that promise hope and help.

This book is an introduction to chest radiology, specifically designed for the needs of first-year residents. On the first rotation in chest imaging, radiology residents are asked to learn significant amounts of information at a fast and unrelenting pace. However, most current books are densely written and contain far more material than residents need to know. Moreover, the number, variety, and quality of images is often limited. What Radiology Residents Need to Know: Chest Radiology answers these needs by presenting the important information in bullet fashion, divided into convenient sub-units, such as "clinical information," "imaging findings," and "management." In most cases, an individual pathological condition can be presented in one page or less. This book covers such topics as volume loss, pneumonia, pulmonary edema, inhalation diseases, and pulmonary, mediastinal, and pleural tumor imaging. In addition, it contains tips on approaching and interpreting chest radiographs and CT based on decades of practical experience and teaching residents at the work station. With liberal use of illustrations in the text and an online bank of many more high-quality images, this book gives readers a comprehensive library of chest imaging scans and serves as an ideal guide for radiology residents.
