This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities, and continual science learning (CSL) settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking – sometimes direct observation and in other instances, their memories. The result is a collection of research and essays that offer theory, techniques, outcomes, and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor-patient communications. Each chapter contains samples, insights, and where applicable, analysis techniques. The chapters in this book should be helpful to researchers and teachers alike, across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education: An instance of observation (Audubon, Linnaeus); A process (how plants grow over time, what happens when chemicals combine); Conceptions of what science is and who does it; Images of identity development in science teaching and learning.

Is there a way of exploring the work of students beyond just 'right' and 'wrong'? If mistakes are an important part of the learning process, do they need to be explored deeply? Does a teacher stand to gain a better understanding of the workings of her students' minds if an attempt is made to systematically examine the thought process behind every mistake? What is the hidden takeaway (missed take) in every mistake, for a student as well as a teacher? Four teachers (two language, two maths) examined such questions as part of their action research into students' mistakes – and eventually effected a turnaround in the way that their 'struggling' students began to approach subjects like English and mathematics. In this compilation of four engaging journeys, the impact of such an investigation on both the teacher and the taught emerges: as teachers begin to gain new insights into their own mental biases and tacit assumptions, students, too, begin to loosen their grip on age-old fears and prejudices – the phobia(s) slowly giving way to the desire to look for stimulating challenges. There is also a roadmap for teachers who wish to try such an exploration in their own classes in order to empower students to turn into reflective learners.

The Namibian constitution makes full provision for education as a fundamental human right and freedom. Three years into independence, as part of the government's educational policy, the 'Education for All Policy' was launched as a stepping stone to free quality education. However, inequities have become widely pronounced within the Namibian educational system. Democracy and Education in Namibia and beyond debates the education–democracy nexus in Namibia and the southern African context. It defines and explores the meaning of democracy and related concepts. It also looks at what democracy means in the context of human rights and access to education. The ten chapters in this collection interrogate the strengths and limitations of education as an instrument of social change and question whether or not the Namibian educational objectives and practices do develop and help to sustain a democratic culture in Namibia. The authors in the collection have drawn material from their own teaching and research experience across the fields of education and social science in Namibia and beyond, and present their findings in a pedagogical framework suitable as a challenging text for tertiary students. At a time when education is in crisis, especially in South Africa where strident calls for free tertiary education and Africanisation of the curriculum are

spreading like wildfire, this book gives scholarly insight into the history and social conditions that gave rise to our current predicament. The Success International series offers a practical approach to language learning and support.
