Williams formulae, factors and accurate shortcuts were first used to help his students, but then the author saw that many professional construction workers also could not make simple calculations in the field.)-- Author, teacher and contractor Kenneth Williams, Sr., announced today the release of Applying Mathematics to Construction, Carpentry Mathematics and Estimating, published by Outskirts Press. Williams handy guide for both students and professionals diminishes the need for cumbersome measuring devices and calculators by teaching simple, easy formulae for quickly figuring out construction math problems and material estimation costs. Realizing that the use of calculators and measuring devices can also hamper ones ability to think creatively and quickly on the spot, Williams put together these clever mental calculation tips to help students, instructors and general contractors. The first section of Applying Mathematics to Construction shows how to make calculations without the use of external tools and contains such innovative tricks as his conversion of a large number of feet to inches in seconds, mentally. Section two covers how materials are measured and sold and, like the first section, offers one simple formula after another to make on the spot calculations simply and immediately.

This book contains all the information necessary for framing houses and light commercial buildings. Includes shortcuts to laying out, speed cutting trimmers and plates, rake walls, installing ceiling backing, ceiling joists and truss joists, arches and drop ceilings--all with time-saving techniques. Over 100 on-the-job photos of how to do it right and what can go wrong.

A Workbook for students provides a wide range of practice problems to reinforce concepts learned in each chapter, as well as to prepare students for exams. Question types include multiple choice, completion, and identification as well as critical math problems and soft skill activities. Instructors may assign these questions as homework, to ensure full comprehension of the material.
